

Sewage Disposal System

Sewage treatment is the process of removing contaminants from municipal wastewater, containing mainly household sewage with some industrial wastewater. Physical, chemical, and biological processes are used to remove contaminants and produce treated wastewater (or treated effluent) that is safe enough for release into the environment.

At R V College of Engineering, a STP (Sewage Treatment Plant) of 250KLD capacity has been set up, the waste water generated within the campus of RVCE has been collected and treated with treatment processes such as Screening, Aeration, Sedimentation, Filtration and chlorination. The treated effluent has been used for gardening in the college campus and also for flushing of toilets in the Hostel.

Sewage Treatment Plant: 250KLD
