Bachelor of Engineering (B.E)

Scheme And Syllabus Of VII & VIII Semester (2021 Scheme)

B.E. Programs : AI, AS, BT, CH, CS, CV, EC, EE, EI, ET, IM, IS, ME. M. Tech (13) MCA, M.Sc. (Engg.) Ph.D. Programs : All Departments are recognized as Research Centres by VTU Except AI & AS

AEROSPACE ENGINEERING

DEPARTMENT VISION

Emerge as a centre of excellence in Aerospace Engineering, Imparting Quality Technical Education, Interdisciplinary Research & Innovation with a focus on Societal empowerment through Sustainable & Inclusive Technologies.

DEPARTMENT MISSION

- Imparting Quality Technical Knowledge in Basic & Applied areas of Aerospace Engineering incorporating the principles of Outcome Based Education.
- Provide state-of-the art laboratories and infrastructure facilities, conducive to motivate Interdisciplinary Research and Innovation in Aerospace Engineering.
- Develop self-motivated engineers with a blend of Discipline, Integrity, Engineering Ethics and Social Responsibility.
- Strengthening collaboration with industries, research organizations and institutes for Internships, Joint Research and Consultancy.
- Focus towards Integrating Sustainable and Inclusive Technologies for Societal Symbiosis.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

PEO1: To provide opportunities for successful professional career with a sound fundamental knowledge in Mathematics, Physical Science & Aerospace Engineering.

PEO2: Motivate innovative research in specialized areas of Aerospace Engineering viz Aerospace structural design, Aerodynamics, Aerospace Propulsion and Guidance & Control systems.

PEO3: Promoting development of problem solving abilities by adopting analytical, numerical and experimental skills with awareness on societal impact.

PEO4: Imbibing sound communication skills, team working ability, professional ethics and zeal for lifelong learning.

PROGRAM SPECIFIC OUTCOMES (PSOs)

PSO	Description
PSO1	Utilization of the fundamental knowledge and skills of Aerospace Engineering to develop pragmatic solutions for complex Aerospace Engineering problems.
PSO2	Apply Professional Engineering practices and strategies in the development of systems and subsystems for Aerospace Applications.
PSO3	Exhibit Effective Communication skills and a Zeal to function with multi-disciplinary teams
PSO4	Demonstrate Professional Ethics and Responsibilities in Engineering practices towards the achievement of societal symbiosis.

Go, change the world

FATIGUE & FRACTURE MECHANICS								
	Category: Professional Core Elective-III (Group – G)							
			(Theory)	_				
Course Code	:	21AS73GB		CIE	:	100 Marks		
Credits: L:T:P	Credits: L:T:P : 3:0:0 SEE : 100 Marks							
Total Hours	:	45L		SEE Duration	:	3.00 Hours		

Unit-I	10 Hrs
Fundamentals of Fracture Mechanics: Introduction to fracture Mechanics, Types and C	Characteristics of
Brittle & Ductile Fractures, Brittle-Ductile transition, Fracture mechanics approach to	design - Energy
approach, Stress Intensity approach, Time dependent crack growth & damage tolerance, Cra	ck in a structure,
Modes of cracking, Fracture Toughness.	

Unit – II	09 Hrs
Linear Elastic Fracture Mechanics (LEFM): Griffith's Energy balance criterion, Energy re	lease rate (ERR),
Stability of crack growth-R curve, Stress intensity factor (SIF), Direction of crack propagat	ion, mixed mode
fracture, SIF for different geometries, Relationship between K and G, Experimental determinat	ion of Kc, Crack-
tip plasticity Correction factor for plasticity effects.	
	00 11

 Unit –III
 08 Hrs

 Elastic–Plastic Fracture Mechanics: Introduction, J-integral, Relation between J-integral and CTOD, crack resistance curve, Experimental determination of Kc and J, Constraints effects in Fracture.
 08 Hrs

 Unit –IV
 08 Hrs

 Fatigue of Structures: S.N. curves, Stress-life approach, Strain-life approach, Mean stress effects, Goodman, Gerber and Soderberg relations, Neuber's stress concentration factors - Plastic stress concentration factors - Notched S.N. curves.

Unit -V10 HrsStatistical Aspects of Fatigue Behaviour: Low cycle and high cycle fatigue - coffin - Manson's relation -
Transition life - cyclic strain hardening and softening -Cycle counting techniques, Paris law, Miner's rule,
Damage rule for irregular loads, Variable amplitude loading.

Course	• Outcomes: At the end of this course the student will be able to :
CO1:	Identify and describe the basic fracture and fatigue mechanisms and apply that knowledge to failure
COI	analysis.
CO2:	Correctly apply linear elastic fracture to predict material failure.
CO3:	Predict lifetimes for fatigue and environmentally assisted cracking.
CO4:	Realise the importance of composite materials in Aerospace structures.

Credits: L:T:P	:	3:0:0		SEE	:	100 Marks
Total Hours	:	45L		SEE Duration	:	3.00 Hours

Unit-I	10 Hrs
History of rocketry & launch vehicles , Ascent Mission Basics, Force and Geometry Models	1 & 2, Idealized
Performance, Current & future launch vehicles. Orbit/trajectory requirements and missions.	
Unit – II	09 Hrs
Idealized Performance, Trajectory Under Gravity, Impact of Gravity, Impact of Drag, Δv	& initial sizing,
inboard profile & layout. Engine selection. Preliminary mass estimation	-
Unit –III	08 Hrs
Ascent Mission Design, Multi-stage Rocket Concept, Multi-stage Design Basics, Multi-sta	age Formulation,
Optimal Staging Concept, Lagrange's Solution, Approximate Staging Solution	_
Unit –IV	08 Hrs
Concept of Rocket Variant, Variant Design Solution, Parallel Staging Concept, Relativistic a	nd SSTO Rocket
Concepts, Air-breathing Rockets and Ballistic Missiles	
Unit –V	10 Hrs
Jet Damping and Spin in Rockets and Missiles, Basics of Rocket Launching, Fundamentals of	Re-entry, Typical
Re-entry Techniques	

Course	Outcomes: At the end of this course the student will be able to :
CO1:	Demonstrate an understanding of the fundamental principles of orbital mechanics
CO2:	Able to analyze the effects of perturbation on the motion of satellites and spacecraft, and develop
002:	strategies to mitigate their impact
CO3:	Develop the ability to design space trajectories and maneuvers to achieve specific mission objectives
CO4:	Predict and analyze the behavior of spacecraft and satellites in various orbital environments.

RUBRIC FOR THE CONTINUOUS INTERNAL EVALUATION (THEORY)				
#	COMPONENTS	MARKS		
1.	QUIZZES: Quizzes will be conducted in online/offline mode. TWO QUIZZES will be conducted & Each Quiz will be evaluated for 10 Marks adding up to 20 Marks. THE SUM OF TWO QUIZZES WILL BE CONSIDERED AS FINAL QUIZ MARKS.	20		
2.	TESTS: Students will be evaluated in test consisting of descriptive questions with different complexity levels (Revised Bloom's Taxonomy Levels: Remembering, Understanding, Applying, Analyzing, Evaluating, and Creating). TWO TESTS will be conducted. Each test will be evaluated for 50 Marks, adding up to 100 Marks. FINAL TEST MARKS WILL BE REDUCED TO 40 MARKS.	40		
3.	EXPERIENTIAL LEARNING: Students will be evaluated for their creativity and practical implementation of the problem. Phase I (20) & Phase II (20) ADDING UPTO 40 MARKS .	40		
	MAXIMUM MARKS FOR THE CIE THEORY	100		

	RUBRIC FOR SEMESTER END EXAMINATION (THEORY)					
Q. NO	CONTENTS	MARKS				
	PART A					
1	Objective type questions covering entire syllabus	20				
	PART B (Maximum of THREE Sub-divisions only)					
2	Unit 1: (Compulsory)	16				
3 & 4	Unit 2: Question 3 or 4	16				
5&6	Unit 3: Question 5 or 6	16				
7&8	Unit 4: Question 7 or 8	16				
9 & 10	Unit 5: Question 9 or 10	16				
	TOTAL	100

Credits: L:T:P	:	3:0:0	SEE	
Total Hours	:	45L	SEE Duration	
Total Hours	:	45L	SEE Duration	
		Unit-I		

 Fundamentals of Hypersonic Flows : Qualitative aspects of hypersonic flow, Physical phenomena in hypersonic flows: Thin shock layers, Entropy layer, Viscous interaction, High temperature flows, Low-density flows, Hypersonic flight path-velocity altitude map.

 Unit – II

 10 Hrs

Inviscid Hypersonic Flows : Basic Hypersonic Relations, Hypersonic Similarity Parameter, Hypersonic Expansion-Wave Relations, Newtonian Flow, Modified Newtonian Law, Centrifugal Force Corrections to Newtonian Theory, Tangent-Wedge Tangent-Cone Methods and Shock-Expansion Method.

Unit –III

 Solutions for Hypersonic Inviscid Flowfields : Basic Governing Equations, Mach Number Independence, Hypersonic Small-Disturbance Equations, Hypersonic Similarity, Hypersonic Equivalence Principle and Blast-Wave Theory, Thin Shock-Layer Theory, Method of Characteristics.

 Unit –IV
 08 Hrs

 Viscous Hypersonic Flow : Governing Equations for Viscous Flow: Navier–Stoke Equations, Similarity

 Parameters and Boundary Conditions, Boundary-Layer Equations for Hypersonic Flow, Hypersonic Transition,

 Hypersonic Aerodynamic Heating, Entropy-Layer Effects on Aerodynamic Heating.

 Unit –V
 10 Hrs

Rarefied Gas Dynamics: The Conception of Rarefied Gas Dynamics, Molecular Model of Gases, Mean Free Path of Molecules, Division of Flow Regimes, Nonequilibrium Phenomena and Rarefied Gas Dynamics, Similarity Criteria, Collision Frequency and Mean Free Path, Velocity and Speed Distribution Functions: Mean Velocities.

Cou	Course Outcomes:		
At t	At the end of this course the student will be able to :		
1	1 Comprehend the important aerodynamic features distinguishing hypersonic flight regime		
2	2 Utilize different theories to build basic equations specific to high speed flow regimes		
3	3 Establish fundamental governing equations to determine the significant hypersonic flow properties		
4	Analyze the effect of free molecular flow on the design of hypersonic vehicle

Linde-Hampson system, pre cooled Linde Hampson system, Linde dual pressure system; Liquefaction systems for Neon, Hydrogen, Helium; Pre cooled Linde Hampson system for Neon and Hydrogen, Claude system, Simon helium liquefaction system. **Gas Purification Systems:** Gas Purification methods Physical adsorption Refrigeration purification chemical

Gas Purification Systems: Gas Purification methods, Physical adsorption, Refrigeration purification, chemical purification
Unit –III 10 Hrs

	10 1110
Gas Separation systems: Thermodynamically ideal gas separation system, properties of mixtu	ares, principles of
gas separation, Air separation systems, Hydrogen & Helium separation systems.	

Cryogenic measurement systems: Temperature, Pressure, Flow-rate and liquid-level measurement.

Unit –Iv	07 Hrs
Cryogenic fluid storage Systems: Introduction, Basic storage vessels, Dewar vessel, Inner ve	essel, outer vessel
design, Piping, safety devices	

Vacuum Technology: Importance of Vacuum technology in cryogenics, Degree of Vacuum, components of Vacuum system, mechanical vacuum pumps, Diffusion pumps, Ion pumps, Cryopumping.

Unit –v	10 Hrs
Cryogenic insulations: Expanded Foam Insulations, Gas Filled Powders & Fibrous Insu	ulations, Vacuum
Insulations, Multilayer Insulations, Liquid Shielded Vessels, Vapour Shielded Vessels.	

Applications of Cryogenics in Propulsion & Space Technology: Cryogenic Propulsion, Cryogenic Aircraft Development, Cryogenic Propellants, Cryogenic injections, Cryogenic Engine, Cryogenics for space Applications.

Course	Course Outcomes: At the end of this course the student will be able to :		
CO1:	Summarize the important parameters required in achieving low temperature environment addressing		
	certain areas of engineering applications		
CO2:	Identify technically suitable thermodynamic cycles to liquefy and separate gas such as hydrogen,		
	helium, neon etc		
CO3:	Adopt feasible techniques for technically and economically producing cryogenic materials		
CO4:	Explain the importance of storing and insulating cryogenic materials

Total Hours	Fotal Hours:45LSEE Duration:3.00 Hours					

Unit-I	U8 Hrs
Introduction to Unmanned Aerial Vehicles (UAVs): History of UAVs, Need of	unmanned aerial
systems, Overview of UAV Systems-System Composition, Classes and Missions of UAV	s-Classification of
UAVs based on size, range and endurance, Applications, Examples of UAVs	
Unit – II	11 Hrs

TT **1**/ **T**

Unit IV

Unit – II	11 Hrs
Aerodynamics & Propulsion aspects of UAVs: Basic Aerodynamic Equations, Air foils, lif	t, drag, moments,
Aircraft Polar, The Real Wing and Airplane, Induced Drag, Total Air-Vehicle Drag, Flappin	ng Wings, Rotary
wings.	

Propulsion: Thrust Generation and basic thrust equation, Sources of Power for UAVs- Piston, Rotary, Gas turbine engines, electric or battery powered UAVs.

Unit –III	08 Hrs
Airframe of UAVs: Mechanic loading, basics of types of load calculation and structural engi	neering, Material
used for UAV (general introduction), FRP and methods of usage in UAV, Testing of FRP spe-	cimens for UAV,
selection criteria for structure, Types of structural elements used in UAV their significance an	d characteristics,
Methods of manufacturing UAV structure.	

	10 1115
Payloads for UAVs: Barometers, Accelerometer, Magnetometer, RADAR and range finder,	Non-dispensable
and dispensable Payloads- Optical, electrical, weapon, imaging payloads.	

Unit –V 08 Hrs Mission Planning and Control: Air Vehicle and Payload Control, Reconnaissance/Surveillance Payloads, Weapon Payloads, Other Payloads, Data-Link Functions and Attributes, Data-Link Margin, Data-Rate Reduction, Launch Systems, Recovery Systems, Launch and Recovery Trade-offs.

Course Outcomes: At the end of this course the student will be able to :				
CO1:	Understand the role of UAVs in the current generation for diverse applications ranging from			
COI.	commercial to military purposes			
CO2:	Apply the fundamental concepts of Aerospace Engineering to Design a UAV for a particular Mission			
02:	and application			
CO3:	Evaluate the performance of UAV with a perspective of Aerodynamics, Propulsion, Structures for a			
005:	given Mission			
CO4:	Critically appraise and optimize the performance of the UAV for a given Mission profile

RUBRIC FOR THE CONTINUOUS INTERNAL EVALUATION (THEORY)			
#	COMPONENTS	MARKS	
1.	QUIZZES: Quizzes will be conducted in online/offline mode. TWO QUIZZES will be conducted & Each Quiz will be evaluated for 10 Marks adding up to 20 Marks. THE SUM OF TWO QUIZZES WILL BE CONSIDERED AS FINAL QUIZ MARKS.	20	
2.	TESTS: Students will be evaluated in test consisting of descriptive questions with different complexity levels (Revised Bloom's Taxonomy Levels: Remembering, Understanding, Applying, Analyzing, Evaluating, and Creating). TWO TESTS will be conducted. Each test will be evaluated for 50 Marks, adding up to 100 Marks. FINAL TEST MARKS WILL BE REDUCED TO 40 MARKS.	40	
3.	EXPERIENTIAL LEARNING: Students will be evaluated for their creativity and practical implementation of the problem. Phase I (20) & Phase II (20) ADDING UPTO 40 MARKS .	40	
	MAXIMUM MARKS FOR THE CIE THEORY	100	

	RUBRIC FOR SEMESTER END EXAMINATION (THEORY)				
Q. NO	CONTENTS	MARKS			
	PART A				
1	Objective type questions covering entire syllabus	20			
	PART B (Maximum of THREE Sub-divisions only)				
2	Unit 1: (Compulsory)	16			
3 & 4	Unit 2: Question 3 or 4	16			
5&6	Unit 3: Question 5 or 6	16			
7&8					
9 & 10	Unit 5: Question 9 or 10	16			
	TOTAL	100			

			Semester: V	II

Course	Outcomes: After completing the course, the students will be able to: -
CO 1	Explain the basics of electric and hybrid electric vehicles, their architecture, technologies and
	modelling.
CO 2	Discuss and implement different energy storage technologies used for electric vehicles and their
	management system.
CO 3	Analyze various electric drives and its integration techniques with Power electronic circuits suitable for
	electric vehicles.
CO 4	Design EV Simulator for performance evaluation and system optimization and understand the
	requirement for suitable EV infrastructure.

Tools & Techniques of Project Management : Bar (GANTT) chart, bar chart for combine diagrams and networks, Project evaluation and review Techniques (PERT) Planning, Commanagement.	
Course Outcomes: After completing the course, the students will be able to: -	
course outcomes, much completing the course, the students will be use to -	

CO 1	Understand the fundamental concepts of project management and its relationship with organizational
	strategy, operations management, and business value.
CO 2	Apply techniques for generating, screening, and evaluating project ideas, considering factors such as net
	present value and project rating index.
CO 3	Create Work Breakdown Structures (WBS), utilization of PERT/CPM for developing project schedule,
	alongside requirement collection, scope definition, scope validation, and scope control.
CO 4	Develop skills in project integration, quality, risk management, and scheduling, enabling effective
	project planning, execution, monitoring, and control.

Relationship Mana	gem	ent, Supply Risk N	Ianagement, Regressi	on Algorithms (Con	cepts	s only).	
			Unit –IV				09 Hrs
Warehouse and I Optimization, Clas			t: Warehouse Mana Concepts only).	gement, Inventory	Ma	nagement, V	Varehouse

Demand Management: Demand Management, Demand Forecasting, Time Series Forecasting, Machine Learning Methods (Concepts only).

 Unit –V
 09 Hrs

 Logistics Management: Logistics Management, Modes of Transport in Logistics, Logistics Service Providers,
 Global Logistics Management, Logistics Network Design, Route Optimization (Concepts only).

Experiential Learning:

Data Visualization: Data Visualization in Python, Creating a Figure in Python, Formatting a Figure, Plotting Simple Charts, Plotting with Seaborn, Geographic Mapping with Basemap, Visualizing Starbucks Locations. Python programming for various algorithms applied to supply chain processes and modelling included in the five units of the syllabus.

Course	Course Outcomes: After completing the course, the students will be able to: -					
CO 1	Understand supply chain concepts, systemic and strategic role of SCM in global competitive					
	environment.					
CO 2	Evaluate alternative supply and distribution network structures using optimization models.					
CO 3	Develop optimal sourcing and inventory policies in the supply chain context.					
CO 4	Select appropriate information technology frameworks for managing supply chain processes.

Course Outcomes: At the end of this course the student will be able to :

CO1:	Understand nuclear physics: grasp atomic structure, nuclear models, and the forces driving nuclear interactions
CO2:	Evaluate various reactor types and advanced concepts, applying kinetics and controls to ensure safe and efficient nuclear reactor analysis and design.
CO3:	Examine the nuclear fuel cycle from mining to recycling, assess environmental impact and safety, and promote responsible, sustainable practices throughout.
CO4:	Apply ionizing radiation principles for safety measures; integrate communication and regulatory compliance into emergency response plans effectively.

Total Hours : 42L SEE Duration : 3.00 Hours						

Unit-I	09 Hrs			
Fundamentals & current trends in cognitive psychology: Definition, Emergence of cognitive psychology,				
Cognitive development theories and perspectives; Current status and trends in cognitive Psyc	chology. Research			
methods in cognitive psychology- goals of research. Distinctive research method. Current ar	eas of research in			
cognitive psychology, (Educational application, marketing and advertisement).				

Unit – II08 HrsBasic cognitive processes: Sensation and Perception: Sensory receptors and Brain, The constancies, pattern
recognition, Modularity, Imagery: Characteristics of Imagery, Cognitive maps. Attention and Information
processing: Nature and Types, Theories and models of attention. Neuropsychological studies of Attention.
Consciousness: – meaning, Modern Theories and Contemporary Research of Consciousness.

 Unit –III
 08 Hrs

 Reasoning, Creativity and Problem-Solving: Reasoning definition, types, influencing factors. Creativitydefinition, steps involved in creative process, obstacles involved in creativity, enhancing techniques of creativity. Metacognition: Problem-solving, steps in problem solving, types, methods, obstacles, and aids of problem-Solving. Concept of Design Thinking

Unit –IV08 HrsPsycholinguistics: Definition, characteristics of language, theories - Chomsky. Structure of Language
(Properties), Stages in Language Development, Neurological Language. Comprehension and Production.
Bilingualism, Multilingualism and Learning disability.

Unit –V09 HrsCognitive Neuroscience: Definition and emergence of cognitive neuroscience, Scope of Neuroscience,
structure and functions of Brain, Brain Plasticity, Intelligence and Neuroscience.Meta-cognitive strategies.
Artificial intelligence, Robotics, Models on Information Processing.

Course Outcomes: At the end of this course the student will be able to :				
CO1:	Describe the basic theories, principles, and concepts of cognitive psychology as they relate to behaviours and mental processes.			
CO2:	Define learning and compare and contrast the feators that cognitive helpevieural and Humanistic			
CO3:	Develop understanding of psychological attributes such as reasoning, problem solving creativity, resulting in their enhancement and apply effective strategies for self-management and self-improvement.			
CO4:	Apply the theories into their own and others' lives in order to better understand their personalities and experiences.

Credits: L:T:P	:	0:0:2		SEE	:	50 Marks		
Total Hours	:	04		SEE Duration	:	02 Hrs		

	GUIDELINES
1.	The duration of the internship shall be for a period of <i>6/8 weeks</i> on full time basis after VI semester
	final exams and before the commencement of VII semester.
2.	The student must submit letters from the industry clearly specifying his / her name and the duration of
	the internship on the company letter head with authorized signature.
3.	Internship must be related to the field of specialization of the respective UG programme in which the
	student has enrolled.
4.	Students undergoing internship training are advised to report their progress and submit periodic
	progress reports to their respective guides.
5.	Students have to present the internship activities carried out to the departmental committee and only
	upon approval by the committee, the student can proceed to prepare and submit the hard copy of the
	final internship report. However, interim or periodic reports as required by the industry / organization
C	can be submitted as per the format acceptable to the respective industry /organizations.
6.	The reports shall be printed on A4 size with 1.5 spacing and Times New Roman with font size 12, outer cours of the report (urepner) has to be lucry color for UG circuit Programs and Light Plue for
	outer cover of the report (wrapper) has to be Ivory color for UG circuit Programs and Light Blue for Non-Circuit Programs.
7.	The broad format of the internship final report shall be as follows
7.	 Cover Page
	Certificate from College
	Certificate from Industry / Organization
	Acknowledgement
	• Synopsis
	• Table of Contents
	• Chapter 1 - Profile of the Organization: Organizational structure, Products, Services,
	Business Partners, Financials, Manpower, Societal Concerns, Professional Practices,

	• Chapter 3 - Tasks Performed: summary of the tasks performed during 8-week period
	• Chapter 4 – Reflections: Highlight specific technical and soft skills acquired during
	 References & Annexure
	References & Annexure
Course	e Outcomes:
	oing through the internship the student will be able to:
	Apply Engineering and Management principles
	Analyze real-time problems and suggest alternate solutions
	Communicate effectively and work in teams mbibe the practice of professional ethics and need for lifelong learning.
007.1	more de processional canes and need for morong fourning.

Scheme of Continuous Internal Evaluation (CIE):

The evaluation committee shall consist of Guide, Professor/Associate Professor and Assistant Professor. The committee shall assess the presentation and the progress reports in two reviews. The evaluation criteria shall be as per the rubrics given below:

Reviews	Activity	Weightage
Review-I	Explanation of the application of engineering knowledge in industries,	25 Marks
	ability to comprehend the functioning of the organization/ departments.	
Review - II	Importance of resource management, environment and sustainability,	25 Marks
	presentation skills and report writing	

Scheme for Semester End Evaluation (SEE):

The SEE examination shall be conducted by an external examiner (domain expert) and an internal examiner. Evaluation shall be done in batches, not exceeding 6 students per batch.

Scheme of Evaluation for SEE				
Particulars	%Marks			
Project Synopsis (Initial Writeup)	10%			
Project Demo/Presentation	30%			
Methodology and Results Discussion	30%			
Project Work Report	10%			
Viva-voce	20%			
Total	100			

	Semester: VII							
	MINOR PROJECT							
		Cat	tegory: Practica	al				
Course Code	:	21AS77P		CIE	:	50 Marks		
Credits: L:T:P		0:0:2		SEE	:	50 Marks		
Total Hours	:	04		SEE Duration	:	2 Hours		

GUIDELINES

1. The minor project is to be carried out individually or by a group of students. (maximum of 4 members and minimum of 3 students).

2. Each student in a team must contribute equally in the tasks mentioned below.

3. Each group has to select a current topic that will use the technical knowledge of their program of study after detailed literature survey.

4. The project should result in system/module which can be demonstrated, using the available resources in the college.

5. The CIE evaluation will be done by the committee constituted by the department. The committee shall consist of respective guide & two senior faculty members as examiners. The evaluation will be done for each student separately.

6. The final copy of the report should be submitted after incorporation of any modifications suggested by the evaluation committee.

The minor-project tasks would involve:

- 1. Carrying out the Literature Survey of the topic chosen.
- 2. Understand the requirements specification of the minor-project.
- 3. Detail the design concepts as applicable through appropriate functional block diagrams.
- 4. Commence implementation of the methodology after approval by the faculty.
- 5. Conduct thorough testing of all the modules developed and carry out integration testing.
- 6. Demonstrate the functioning of the minor project along with presentations of the same.
- 7. Prepare a project report covering all the above phases with proper inference to the results obtained.
- 8. Conclusion and Future Enhancements must also be included in the report.

The students are required to submit the report in the prescribed format provided by the department.

Course Outcomes:

After going through the minor project the student will be able to:

CO1: Interpreting and implementing the project in the chosen domain by applying the concepts learnt.

CO2: The course will facilitate effective participation by the student in team work and development of communication and presentation skills essential for being part of any of the domains in his / her future career.

CO3: Appling project life cycle effectively to develop an efficient product.

CO4: Produce students who would be equipped to pursue higher studies in a specialized area or carry out research work in an industrial environment.

Scheme of Continuous Internal Evaluation (CIE):

The evaluation committee shall consist of Guide, Professor/Associate Professor and Assistant Professor. The committee shall assess the presentation and the progress reports in three review phases. The evaluation criteria shall be as per the rubrics given below:

ReviewPhase	Activity	Weightage
Phase-I	Synopsis submission, approval of the selected topic, Problem	10 Marks
	definition, Literature review, formulation of objectives, methodology	
Phase - II	Mid-term evaluation to review the progress of implementation, design,	15 Marks
	testing and result analysis along with documentation	
Phase -III	Submission of report, Final presentation and demonstration	25 Marks

Scheme for Semester End Evaluation (SEE):

The SEE examination shall be conducted by an external examiner (domain expert) and an internal examiner. Evaluation shall be done in batches, not exceeding 6 students per batch.

RUBRIC FOR THE CONTINUOUS INTERNAL EVALUATION (THEORY)					
#	COMPONENTS	MARKS			
1.	QUIZZES: Quizzes will be conducted in online/offline mode. TWO QUIZZES will be conducted & Each Quiz will be evaluated for 10 Marks adding up to 20 Marks. THE SUM OF TWO QUIZZES WILL BE CONSIDERED AS FINAL QUIZ MARKS.	20			
2.	TESTS: Students will be evaluated in test consisting of descriptive questions with different complexity levels (Revised Bloom's Taxonomy Levels: Remembering, Understanding, Applying, Analyzing, Evaluating, and Creating). TWO TESTS will be conducted. Each test will be evaluated for 50 Marks, adding up to 100 Marks. FINAL TEST MARKS WILL BE REDUCED TO 40 MARKS.	40			
3.	EXPERIENTIAL LEARNING: Students will be evaluated for their creativity and practical implementation of the problem. Phase I (20) & Phase II (20) ADDING UPTO 40 MARKS .	40			
	MAXIMUM MARKS FOR THE CIE THEORY	100			

RUBRIC FOR SEMESTER END EXAMINATION (THEORY)							
Q. NO	CONTENTS	MARKS					
PART A							
1	Objective type questions covering entire syllabus	20					
	PART B (Maximum of THREE Sub-divisions only)						
2	Unit 1: (Compulsory)	16					
3 & 4	Unit 2: Question 3 or 4	16					
5&6	Unit 3: Question 5 or 6	16					
7&8	Unit 4: Question 7 or 8	16					
9 & 10	Unit 5: Question 9 or 10	16					
	TOTAL	100					

Semester: VIII								
MAJOR PROJECT								
Category: Practical								
Course Code	:	21AS81P		CIE	:	100 Marks		
Credits: L:T:P	:	0:0:12		SEE	:	100 Marks		
Total Hours	:	24		SEE Duration	:	3.00 Hrs		

GUIDELINES

- **1.** The project topic, title and synopsis have to be finalized and submitted to their respective internal guide(s) before the beginning of the 8th semester.
- **2.** The detailed Synopsis (approved by the department Project Review Committee) has to be submitted during the 1st week after the commencement of 8th semester.

Batch Formation:

- Students are free to choose their project partners from within the program or any other program.
- Each student in the team must contribute towards the successful completion of the project.
- The project may be carried out In-house / Industry / R & D Institution. The project work is to be carried out by a team of two to four students, in exceptional cases where a student is placed in a company and offered an internship through the competitive process or student is selected for internship at national or international level through competitive process, the student can work independently.
- The students are allowed to do either a project for full 5 days in the industry or full 5 days in the college.
- In case the project work is carried out outside Bengaluru, such students must be available during Project Evaluation process scheduled by the respective departments and they must also interact with their guide regularly through Email / Webinar / Skype etc.

Project Topic Selection:

The topics of the project work must be in the field of respective program areas or in line with CoE's(Centre of Excellence) identified by the college or List of project areas as given by industry/Faculty. The projects as far as possible should have societal relevance with focus on sustainability.

Students can select courses in NPTEL from the discipline of Humanities and Social Sciences, Management, Multidisciplinary and Design Engineering. The course chosen could be either of 4w/8w/12w duration. The students need to enrol for a course, register for the exam and submit the e-certificate to the department, as and when it is released by NPTEL. The same will be considered as one of the components during project evaluation of phase 2 and phase 5.

Project Evaluation:

- Continuous monitoring of project work will be carried out and cumulative evaluation will be done.
- The students are required to meet their internal guides once in a week to report their progress in project work.
- Weekly Activity Report (WAR) has to be maintained in the form of a diary by the project batch and the same has to be discussed with the Internal Guide regularly.
- In case of Industry project, during the course of project work, the internal guides will have continuous interaction with external guides and will visit the industry at least twice during the project period.
- For CIE assessment the project groups must give a final seminar with the draft copy of the project report.
- The presentation by each group will be for 20-30 minutes and every member of the team needs to justify the contributions to the project.
- The project team is required to submit Hard copies of the detailed Project Report in the prescribed format to the department.

- For CIE 50% weightage should be given to the project guide and 50% weightage to the project evaluation committee.
- Before the final evaluations the project group is required to produce a No dues certificate from Industry, Central Library and Department.

Course Outcomes:

After going through the major project the student will be able to:

CO1: Apply knowledge of mathematics, science and engineering to solve respective engineering domain problems.

CO2: Design, develop, present and document innovative/multidisciplinary modules for a complete engineering system.

CO3: Use modern engineering tools, software and equipment to solve problem and engage in life-long learning to follow technological developments.

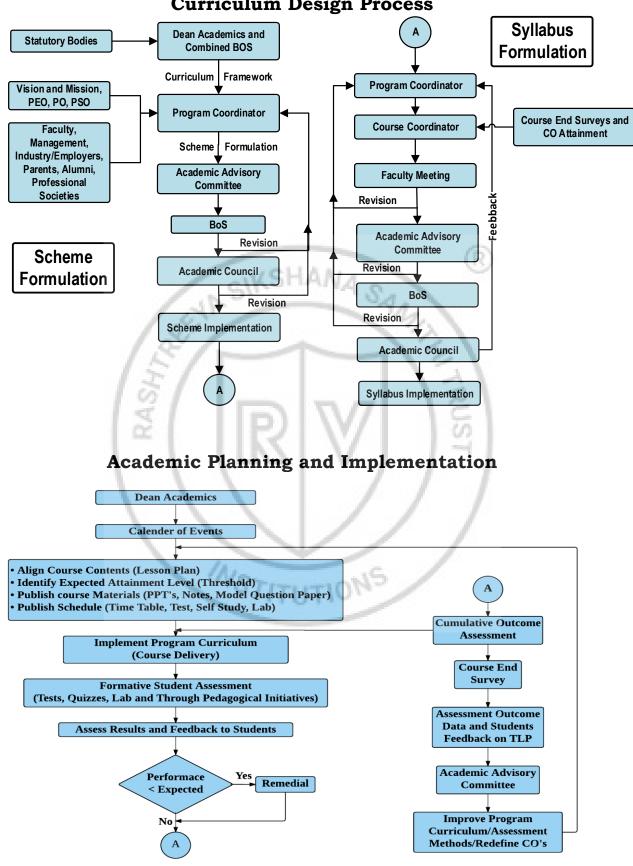

CO4: Function effectively as an individual, or leader in diverse teams, with the understanding of professional ethics and responsibilities.

Scheme of Continuous Internal Evaluation (CIE):

The following are the weightings given for the various stages of	f the project
1.Selection of the topic and formulation of objectives	10%
2. Design and Development of Project methodology	25%
3.Execution of Project	25%
4.Presentation, Demonstration and Results Discussion	30%
5.Report Writing & Publication	10%
Scheme for Semester End Evaluation (SEE): The following are the weightages given during Viva Examination	on
1.Written presentation of synopsis	10%
2.Presentation/Demonstration of the project	30%
3.Methodology and Experimental Results & Discussion	30%
4.Report	10%
5.VivaVoce	20%

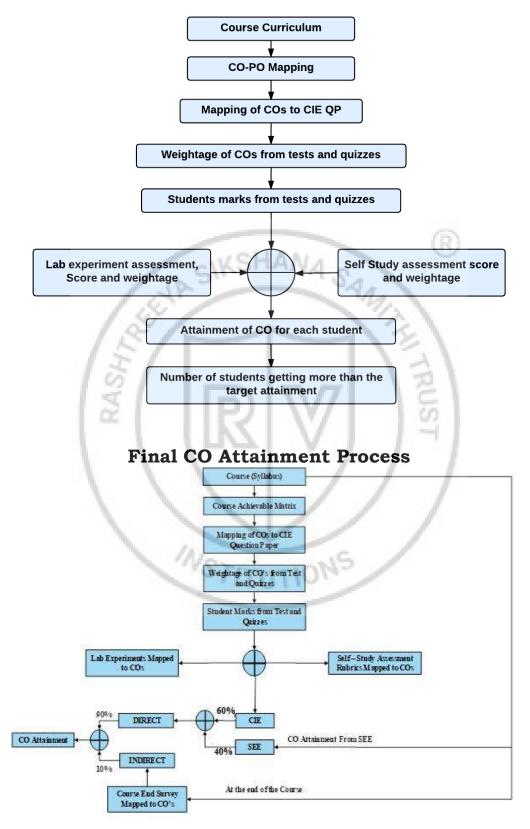

Curriculum Design Process

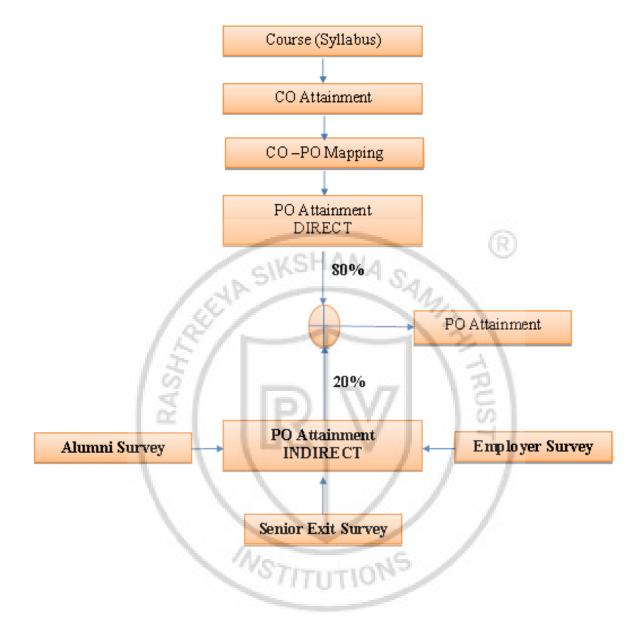

Process For Course Outcome Attainment

Program Outcome Attainment Process

KNOWLEDGE & ATTITUDE PROFILE

- **WK1:** A systematic, theory-based understanding of the natural sciences applicable to the discipline and awareness of relevant social sciences.
- **WK2:** Conceptually-based mathematics, numerical analysis, data analysis, statistics and formal aspects of computer and information science to support detailed analysis and modelling applicable to the discipline.
- **WK3:** A systematic, theory-based formulation of engineering fundamentals required in the engineering discipline.
- **WK4:** Engineering specialist knowledge that provides theoretical frameworks and bodies of knowledge for the accepted practice areas in the engineering discipline; much is at the forefront of the discipline.
- **WK5:** Knowledge, including efficient resource use, environmental impacts, whole-life cost, re-use of resources, net zero carbon, and similar concepts, that supports engineering design and operations in a practice area.
- **WK6:** Knowledge of engineering practice (technology) in the practice areas in the engineering discipline.
- **WK7:** Knowledge of the role of engineering in society and identified issues in engineering practice in the discipline, such as the professional responsibility of an engineer to public safety and sustainable development.
- **WK8:** Engagement with selected knowledge in the current research literature of the discipline, awareness of the power of critical thinking and creative approaches to evaluate emerging issues.
- **WK9:** Ethics, inclusive behaviour and conduct. Knowledge of professional ethics, responsibilities, and norms of engineering practice. Awareness of the need for diversity by reason of ethnicity, gender, age, physical ability etc. with mutual understanding and respect, and of inclusive attitudes.

PROGRAM OUTCOMES (POs)

- * **PO1:** Engineering Knowledge: Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization as specified in WK1 to WK4 respectively to develop to the solution of complex engineering problems.
- * PO2: Problem Analysis: Identify, formulate, review research literature and analyze engineering problems reaching substantiated complex conclusions with consideration for sustainable development. (WK1 to WK4)
- * **PO3:** Design/Development of Solutions: Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required. (WK5)
- **PO4:** Conduct Investigations of Complex Problems: Conduct investigations of complex * engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions. (WK8).
- * **PO5:** Engineering Tool Usage: Create, select and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems. (WK2 and WK6)
- PO6: The Engineer and The World: Analyze and evaluate societal and environmental * aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment. (WK1, WK5, and WK7).
- * PO7: Ethics: Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws. (WK9)
- * **PO8:** Individual and Collaborative Team work: Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.
- * **PO9:** Communication: Communicate effectively and inclusively within the community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences
- * **PO10:** Project Management and Finance: Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.
- PO11: Life-Long Learning: Recognize the need for, and have the preparation and * ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change. (WK8)

INNOVATIVE TEAMS OF RVCE

Ashwa Mobility Foundation (AMF): Designs and fabricates Formula-themed race cars and mobility solutions to address urban transportation issues.

Astra Robotics Team: Focuses on designing and building application-specific robots.

Coding Club: Helps students gain coding skills and succeed in competitions like GSoC and ACM-ICPC.

Entrepreneurship Development Cell (E-Cell): Promotes entrepreneurship through workshops, speaker sessions, and mentoring for startups.

Frequency Club Team: Works on software and hardware, emphasizing AI and Machine Learning.

Team Garuda: Develops a supermileage urban concept electric car and E-mobility products.

Team Jatayu: Builds low-cost UAVs with autonomous capabilities for various tasks.

Solar Car Team: Aims to create a solar electric vehicle for sustainable transportation.

Team Antariksh: Focuses on space technology and the development of operational rockets.

Team Chimera: Builds a Formula Electric Car through R&D in E-Mobility.

Helios Racing Team: Designs and tests All-Terrain Vehicles, participating in SAE's BAJA competitions.

Team Hydra: Develops autonomous underwater vehicles for tasks like water purification.

Team Krushi: Creates low-cost farming equipment to assist farmers in cultivation and harvesting.

Team Vyoma: Designs and tests radio-controlled aircraft and UAVs.

Team Dhruva: Engages in astronomy-related activities and collaborates on projects with organizations like ICTS and IIA.

Ham Club: Promotes Amateur Radio and explores technical innovations in communications, especially for disaster response.

Cultural Activity Teams

- 1. AALAP (Music club)
- 2. DEBSOC (Debating society)
- 3. CARV (Dramatics club)
- 4. FOOTPRINTS (Dance club)
- 5. QUIZCORP (Quizzing society)
- 6. ROTARACT (Social welfare club)
- 7. RAAG (Youth club)
- 8. EVUKE (Fashion team)
- 9. f/6.3 (Photography club)
- 10. CARV ACCESS (Film-making

NSS of RVCE

NCC of RVCE

Leadership in Quality Technical Education, Interdisciplinary Research & Innovation, with a Focus on Sustainable and Inclusive Technology

- To deliver outcome based Quality education, emphasizing on experientiallearning with the state of the art infrastructure.
- To create a conducive environment for interdisciplinary research and innovation.
- To develop professionals through holistic education focusing on individual growth, discipline, integrity, ethics and social sensitivity.
- To nurture industry-institution collaboration leading to competency enhancement and entrepreneurship.
- To focus on technologies that are sustainable and inclusive, benefiting all sections of the society.

Achieving Excellence in Technical Education, Research and Consulting through an Outcome Based Curriculum focusing on Continuous Improvement and Innovation by Benchmarking against the global Best Practices.

Professionalism, Commitment, Integrity, Team Work, Innovation

RV College of Engineering® Mysore Road, RV Vidyaniketan Post, Bengaluru - 560059, Karnataka, India +91-80-68188110 www.rvce.edu.in
