• Implement the following application of Natural Language Processing • Demonstrate the working of the programs by considering appropriate datasets	
1	**Text Summarization**: Text summarization refers to the technique of shortening long pieces of text. The intention is to create a coherent and fluent summary having only the main points outlined in the document.
2	**World Cloud**: A word cloud is a collection, or cluster, of words depicted in different sizes. The bigger and bolder the word appears, the more often it's mentioned within a given text and the more important it is.
3	**Sentiment Analysis**: Design a program(without using library functions) to perform Sentiment analysis that analyzes digital text to determine if the emotional tone of the message is positive, negative, or neutral using the following vectorization techniques: • TF-IDF • N-GRAMS • Bag of words • One-hot encoding
4	**Topic Modelling**: Topic modeling is an unsupervised machine learning approach that can scan a series of documents, find word and phrase patterns within them, and automatically cluster word groupings and related expressions that best represent the set.
