Guidelines

Guidelines for Design Thinking Lab:

1. The Design Thinking Lab (DTL) is to be carried out by a team of two-three students.
2. Each student in a team must contribute equally in the tasks mentioned below.
3. Each group has to select a theme that will provide solutions to the challenges of societal concern. Normally three to four themes would be identified by the department
4. Each group should follow the stages of Empathy, Design, Ideate, Prototype and Test for completion of DTL.
5. After every stage of DTL, the committee constituted by the department along with the coordinators would evaluate for CIE. The committee shall consist of respective coordinator & two senior faculty members as examiners. The evaluation will be done for each student separately.
6. The team should prepare a Digital Poster and a report should be submitted after incorporation of any modifications suggested by the evaluation committee.

Design Thinking Lab Tasks

1. Carry out the detailed questionnaire to arrive at the problem of the selected theme.
2. The empathy report shall be prepared based on the response of the stake holders.
3. For the problem identified, the team needs to give solution through thinking out of the box innovatively to complete the ideation stage of DTL
4. Once the idea of the solution is ready, detailed design has to be formulated in the Design stage considering the practical feasibility.
5. If the Design of the problem is approved, the team should implement the design and come out with prototype of the system.
6. Conduct thorough testing of all the modules in the prototype developed and carry out integrated testing
7. Demonstrate the functioning of the prototype along with presentations of the same.
8. Prepare a Digital poster indicating all the stages of DTL separately. A Detailed project report also should be submitted covering the difficulties and challenges faced in each stage of DTL.
9. Methods of testing and validation should be clearly defined both in the Digital poster as well as the report.

Course Outcomes: After completing the course, the students will be able to:-	
CO1	Apply the knowledge of engineering science to empathize with the stake holder needs and draw insights trough effective communication
CO2	Formulate, analyze and ideate sustainable solutions considering societal and environmental needs
CO3	Demonstrate knowledge effectively and work in intra-disciplinary or interdisciplinary groups to develop prototypes
