

RV COLLEGE OF ENGINEERING[®]

(Autonomous Institution Affiliated to VTU, Belagavi) R.V. Vidyaniketan Post, Mysore Road Bengaluru – 560 059

Bachelor of Engineering (B.E.) Scheme and Syllabus of III & IV Semesters

2018 SCHEME

AEROSPACE ENGINEERING

VISION

Leadership in Quality Technical Education, Interdisciplinary Research & Innovation, with a Focus on Sustainable and Inclusive Technology

MISSION

- 1. To deliver outcome based Quality education, emphasizing on experiential learning with the state of the art infrastructure.
- 2. To create a conducive environment for interdisciplinary research and innovation.
- 3. To develop professionals through holistic education focusing on individual growth, discipline, integrity, ethics and social sensitivity.
- 4. To nurture industry-institution collaboration leading to competency enhancement and entrepreneurship.
- 5. To focus on technologies that are sustainable and inclusive, benefiting all sections of the society.

QUALITY POLICY

Achieving Excellence in Technical Education, Research and Consulting through an Outcome Based Curriculum focusing on Continuous Improvement and Innovation by Benchmarking against the global Best Practices.

CORE VALUES

Professionalism, Commitment, Integrity, Team Work, Innovation

RV COLLEGE OF ENGINEERING[®] (Autonomous Institution Affiliated to VTU, Belagavi) R.V. Vidyaniketan Post, Mysore Road Bengaluru – 560 059

Bachelor of Engineering (B.E.) Scheme and Syllabus of III & IV Semesters

2018 SCHEME

DEPARTMENT OF AEROSPACE ENGINEERING

Department Vision

Emerge as a centre of excellence in Aerospace Engineering, Imparting Quality Technical Education, Interdisciplinary Research & Innovation with a focus on Societal empowerment through Sustainable & Inclusive Technologies.

Department Mission

- Imparting Quality Technical Knowledge in Basic & Applied areas of Aerospace Engineering incorporating the principles of Outcome Based Education.
- Provide state-of-the art laboratories and infrastructure facilities, conducive to motivate Interdisciplinary Research and Innovation in Aerospace Engineering.
- Develop self-motivated engineers with a blend of Discipline, Integrity, Engineering Ethics and Social Responsibility.
- Strengthening collaboration with industries, research organizations and institutes for Internships, Joint Research and Consultancy.
- Focus towards Integrating Sustainable and Inclusive Technologies for Societal Symbiosis.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

PEO1: To provide opportunities for successful professional career with a sound fundamental knowledge in Mathematics, Physical Science & Aerospace Engineering.

PEO2: Motivate innovative research in specialized areas of Aerospace Engineering viz Aerospace structural design, Aerodynamics, Aerospace Propulsion and Guidance & Control systems.

PEO3: Promoting development of problem solving abilities by adopting analytical, numerical and experimental skills with awareness on societal impact.

PEO4: Imbibing sound communication skills, team working ability, professional ethics and zeal for lifelong learning.

PSO	Description					
PSO1	Utilization of the fundamental knowledge and skills of Aerospace Engineering to develop pragmatic solutions for complex Aerospace Engineering problems.					
PSO2	Apply Professional Engineering practices and strategies in the development of systems and subsystems for Aerospace Applications.					
PSO3	Exhibit Effective Communication skills and a Zeal to function with multi- disciplinary teams					
PSO4	Demonstrate Professional Ethics and Responsibilities in Engineering practices towards the achievement of societal symbiosis.

There are two text books prescribed by VTU for the Kannada Course:

1. Samskruthika Kannada (AADALITHA KANNADA);

2. Balake Kannada (VYAVAHARIKA KANNADA);

The first text book is prescribed for the students who know Kannada to speak, read and write (KARNATAKA STUDENTS). The second text book is for students who do not understand the Kannada language (NON-KARNATAKA STUDENTS)

CO3:	Apply the acquired knowledge to solve variational problems, half range series, differential equations using Laplace transform, system of linear equations and PDEs using finite difference technique.
CO4:	Analyze and interpret applications of functionals, complex Fourier series, IVP and BVP using LT, sparse linear systems and PDEs occurring in Engineering problems.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and experiential learning (EL). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for experiential learning is 20.

Total CIE is 30(Q) +50(T) +20(EL) =100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part A and Part B. Part A consists of objective type questions for 20 marks covering the complete syllabus. Part B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

	INTRODUCTION TO AEROSPACE ENGINEERING							
			(Theory)					
Course Code		18AS33		CIE	••	100 Marks		
Credits: L:T:P		3:0:0		SEE	••	100 Marks		
Hours	:	39L		SEE Duration	:	3.00 Hours		

Course Learning Objectives: To enable the students to:

- **1** Understand the history and basic principles of aviation
- 2 Demonstrate and explain foundation of flight, aircraft structures, material, aircraft propulsion
- 3 Explain the working of each component of an aircraft
- 4 Assess the effect of design parameters on the performance of the aircraft and its components

Unit-I	08 Hrs						
Preliminary Concepts in Aviation: History of aviation, International Standard at	mosphere,						
Atmosphere and its properties, Temperature, pressure and altitude relationships, Numericals, Anatomy							
of an aircraft, Basic components and their function.							

Introduction to Space Flight: Evolution of spacecraft technologies, Introduction to basic orbital mechanics, Orbit equation, Space vehicle trajectories, Kepler's Laws of planetary motion.

Unit – II08 HrsBasic Aerodynamics: Airfoil nomenclature, NACA Airfoils Series, Basic characteristics of airfoils,
Wing Planform Geometry, Aerodynamic forces and moments on an Airfoil with Derivation, Lift and
drag, Aerodynamic Coefficients, Centre of pressure and its significance, Aerodynamic centre, Simple
Numericals on lift and drag.

Unit -III

Aircraft Propulsion: Evolution of Aircraft Propulsion, Illustration of working of gas turbine engine, Comparison of Ideal & Actual Brayton Cycle, Working principle and characteristics of Turbojet, Turboprop, Turbofan, Ramjet, Scramjet, Pulsejet Engines.

Unit -IV	08 Hrs
Aircraft Structures and Materials: Introduction, General types of construction, Monococ	ue, Semi-
Monocoque and Geodesic structures, Typical wing and fuselage structure; Metallic and no	n-metallic
materials for aircraft application. Use of aluminum alloy, titanium, stainless steel and	composite
materials.	-
Unit -V	07 Hrs

Aircraft Instruments: Instrument Displays, Introduction to Navigation Instruments, Basic Air data systems & Probes, Mach meter, Air speed indicator, Vertical speed indicator, Altimeter, Gyro based instruments.

Course	Course Outcomes: At the end of this course the student will be able to :						
CO1:	Appreciate and apply the basic principles of aviation						
CO2:	Apply the concepts of fundaments of flight, basics of aircraft structures, aircraft propulsion and aircraft materials during the development of an aircraft						
CO3:	Comprehend the complexities involved during development of flight vehicles.						
CO4:	Evaluate and criticize the design strategy involved in the development of airplanes

Part A consists of objective type questions for 20 marks covering the complete syllabus. Part B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

THERMODYNAMICS													
	(Theory & Practice)												
Course Code	:	18AS34		CIE	:	100+50 Marks							
Credits: L:T:P	:	3:0:1		SEE	:	100 +50 Marks							
Hours	:	39L+32.5P		SEE Duration	:	3.00+3.00 Hours							

	Cou	rse Leai	rning	Ob	jective	s: To	ena	ble the	studen	ts to:	
Г				-		-		-	-		

- Understand the influence of thermodynamic properties on processes 1
- Apply the thermodynamic laws in practical applications 2
- 3 Evaluate the efficiencies and properties of thermodynamic systems
- 4 Appreciate the practical applications of thermodynamics
- Build thermodynamic solutions for newly emerging technologies. 5

Unit-I	09 Hrs							
Heat &Work: Zeroth Law of thermodynamics and temperature Measurement, Thermodynamic								
definition of Heat and work. Heat and work transfer, Expressions for displacement work in	n various							
processes through P-V diagrams.								
First Law Thermodynamic: First Law of thermodynamics for Closed System, Concept o								
Energy, Enthalpy, First Law of Thermodynamics for a closed system, Steady flow proces	ss, steady							
flow energy equation and applications, PMMK1								
Unit – II	09 Hrs							
Second law of Thermodynamics: Limitations of First Law of thermodynamics, Heat eng	ine, Heat							
pump, Carnot's principle, Carnot cycle and its specialties, Clausius and Kelvin Planck s	tatement,							
PMMK2, Entropy, Entropy change in non-flow processes.								
Unit -III	08 Hrs							
Perfect Gas Laws: Equation of State, specific and Universal Gas constant, Mass a	and Mole							
Fraction, Properties of Gas Mixtures, Throttling and Free Expansion Processes, Deviati	ons from							
perfect Gas								
Properties of Pure Substances: Thermodynamic properties of pure substances in solid, livapor phases, P-V-T behaviour of simple compressible substances, phase rule, thermosproperty tables and charts.	•							

Gas Mixtures: Gas Model, Ideal gas mixture; Dalton's laws of partial pressures, Amagat's law of additive volumes, Vander Waal's Equation of State -compressibility factor, use of compressibility charts.

Unit -IV Gas Cycles: Efficiency of air-Standard cycles-Carnot cycle, Otto, Diesel, Dual and Brayton cycle, Mean effective pressure, Representation of cycles on P-V and T-s diagrams. Performance of I.C. Engines: Air and Fuel measurement, Calculation of IP BP & FP, and Heat

Balance sheet calculations. Unit -V 06 Hrs Psychrometry: Properties of atmospheric air, Construction and use of psychrometric chart, Analysis

of various processes, heating, cooling, dehumidifying and humidifying, Adiabatic mixing of moist air, Analysis of various Air conditioning processes.

LABORATORY EXPERIMENTS

- 1. Determination of flash point and fire point of the given fuels/lubricating oils using Abel Pensky and Pensky Martin's apparatus
- 2. Determination of Calorific Value of Solid & Liquid Fuels using Bomb calorimeter
- 3. Determination of Calorific Value of gaseous fuel using Junker gas calorimeter
- 4. Determination of viscosity of various lubricating oils using Redwood, Saybolts Viscometers
- Determination of viscosity of various lubricating oils using Brookfield Viscometer 5.

07 Hrs

- 6. Study of characteristics and performance of a 4 stroke Diesel Piston engine under various conditions
- 7. Study of characteristics and performance of a 4 stroke Petrol Piston engine under various conditions
- 8. Determination of Friction power using Morse test
- 9. Determination of effectiveness of a parallel and counter flow heat exchangers
- 10. Determination of constituents of a gas mixture using Orsat apparatus

11. Study the performance of vapor compression air conditioning system

Study the performance of vapor compression refrigeration system

Course Outcomes:

At the end of this course the student will be able to :

CO2: Differentiate thermodynamic work and heat and apply I law and II law of thermodynamics to different processes

- **CO3:** Comprehend and utilize the principles of Refrigeration and air conditioning
- **CO4:** Design and Analyze the functioning of various Thermodynamic cycles

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and experiential learning (EL). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for experiential learning is 20.

Total CIE is 30(Q) +50(T) +20(EL) =100 Marks.

Scheme of Continuous Internal Evaluation (CIE); Practical Test for 50 Marks

The Laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average marks (AM) over number of weeks is considered for 30 marks. At the end of the semester a test (T) is conducted for 10 marks. The students are encouraged to implement additional innovative experiments (IE) in the lab and are rewarded for 10 marks. Total marks for the laboratory is 50.

Total CIE is 30(AM) +10 (T) +10 (IE) =50 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part A and Part B. Part A consists of objective type questions for 20 marks covering the complete syllabus. Part B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Scheme of Semester End Examination (SEE); Practical Exam for 50 Marks

SEE for the practical courses will be based on experiment conduction with proper results, is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

Semester End Evaluation (SEE): Theory (100 Marks) + Practical (50 Marks) = Total 150 Marks

	Semester: III												
MECHANICS OF FLUIDS													
(Theory & Practise)													
Course Code	:	18AS35		CIE	:	100+50 Marks							
Credits: L:T:P	:	4:0:1		SEE	:	100 +50 Marks							
Hours	:	52L+32.5P		SEE Duration	:	3.00+3.00 Hours							

Course Learning Objectives: To enable the students to:

- 1 Identify the properties of fluid which influence flow characteristics
- 2 Distinguish fluid flows and evaluate their behaviour using governing equations
- **3** Apply Dimensional analysis and similarity laws for conducting model tests.
- 4 Evaluate and comment on the flow using flow measuring devices
- **5** Discriminate and comment on boundary layer flows
- **6** Interpret the effect of compressibility on fluid flows

Unit-I	10 Hrs
Basic Concepts: Introduction, definition of fluid, concept of continuum, classification of Flu	ids
Fluid Properties: Density, Relative Density, Specific Volume, Specific Weight, Pressu	re, Shear
stress, Newton's law of viscosity, Absolute & Kinematic viscosity, Vapour pressure & c	avitation,
Bulk Modulus & Compressibility, Surface tension & Capillarity.	
Unit – II	12 Hrs
Fluid Statics: Pascal's law, Pressure variation with depth, manometers, hydrostatic	thrust on
submerged plane and curved surfaces, centre of pressure, Buoyancy, Stability of subme	erged and
floating bodies, Metacenter and Meta centric height.	
Fluid Kinematics: Introduction, Lagrangian & Eulerian Description of Fluids, Types of Flu	id Flows,
Stream line, streak line and path line, circulation and vorticity, stream function and velocity	potential
function continuity equation in Integral form and 3D Cartesian coordinates.	-
Unit -III	10 Hrs
Fluid Dynamics: Basic governing equations of fluid flows, Reynold's Transport theore	em, Mass
conservation, Momentum Conservation and Energy conservation equations, and Introd	uction to
Navier – stokes Equations.	
Incompressible Inviscid Flow: Euler's equation of fluid motion (from first principles), B	ernoulli's
equation, Bernoulli's equation for real fluid flows.	
Unit -IV	10 Hrs
Application of Bernoulli's equation: Flow measurement: orifice plate, Venturimeter,	Notches:
rectangular and V-notch, Pitot tube.	
Incompressible Viscous flow: Boundary layer concept, Boundary layer thickness, disp	
thickness and momentum thickness; flow separation, couette flow, poiseuille flow, kineti	c Energy
correction factor.	
Unit -V	10 Hrs
Dimensional Analysis & Model Studies: Units and Dimensions, Dimensional Hom	logeneity,
Dimensional Analysis-Rayleigh's Method, Buckingham's π -Theorem, Dimensionless numbe	rs. Model
Analysis, Types of Similarities and Similitude, Similarity Laws.	
Introduction to Compressible Flows: Stagnation Properties, One-Dimensional Isentrop	pic Flow,
Mach number, Mach Cone.	

LABORATORY EXPERIMENTS

- 1. Determination of major losses in fluids flowing through pipes.
- 2. Determination of minor losses in fluids flowing through pipes
- 3. Determination of Co-efficient of discharge over a V-notch
- 4. Determination of force generated by the impact of water jet on the vanes
- 5. Determination of Co-efficient of discharge through venturimeter
- 6. Determination of Co-efficient of discharge through orifice meter

- 7. Determination of type of flow for different Reynolds Number using Reynolds apparatus
- 8. Study of performance characteristics of a single stage centrifugal pump
- 9. Study of performance characteristics of a multi-stage centrifugal pump
- 10. Study of performance characteristics of a Francis turbine
- 11. Study of performance characteristics of a Pelton wheel
- 12. Determination of metacentric height of floating bodies
- 13. Flow Visualization studies using water tunnel

Course Outcomes:

At the end of this course the student will be able to :

- **CO 1:** Identify the properties of fluid which influence flow characteristics
- **CO 2:** Distinguish fluid flows and evaluate the properties associated with the flow
- **CO 3:** Apply Dimensional analysis and similarity laws for conducting model tests
- **CO 4:** Evaluate and comment on the flow using flow measuring devices
- **CO 5:** Discriminate and comment on boundary layer flows
- **CO 6:** Interpret the effect of compressibility on fluid flows

Euler-Bernoulli beam theory: The Euler-Bernoulli assumptions, Implications of the Euler-Bernoulli					

Euler-Bernoulli beam theory: The Euler-Bernoulli assumptions, Implications of the Euler-Bernoulli assumptions, Beams subjected to axial loads, Beams subjected to transverse loads, Beams subjected to combined axial and transverse loads.

Deflection of Beams: Equation of Elastic curve, Deflection of Beams, Statically indeterminate beams.

Unit -IV						
Torsion: Torsion of circular shafts, polar moment of inertia and polar section modulus, Co	mparison					
of solid and hollow shaft, Torsion combined with axial force and bending moments	s, Power					
transmission.						
Unit -V	08 Hrs					

Failure Theories: Maximum Principal Stress Theory, Maximum Shear Stress, Strain Energy Theory, Shear strain Energy theory, Maximum principal strain theory.

Shells: Thin cylindrical shell of circular cross section, Thin spherical shell, Cylindrical shell with hemispherical ends, Bending stresses in thin-walled circular cylinders.

LABORATORY EXPERIMENTS

- 1. Charpy impact tests for metals
- 2. Izod Impact test for metals
- 3. Compression Test for metals
- 4. Brinell Hardness test for metals (Ferrous and Non Ferrous)
- 5. Vickers Hardness test for metals (Ferrous and Non Ferrous)
- 6. Rockwell Hardness test for metals (Ferrous and Non Ferrous)
- 7. Tension Tests for metals (Ferrous and Non Ferrous)
- 8. Fatigue Tests for metals (Ferrous & Non Ferrous)
- 9. Three point Bending tests for metals (Ferrous & Non Ferrous)
- 10. Tension Characterization using strain gauges

- 11. Bending Characterization using strain gauges
- 12. Torsional characterization using strain gauges

Course Outcomes:

At the end of this course the student will be able to :	
---	--

- **CO 1:** Understand the nature of different types of loads
- **CO 2:** Describe the behaviour of structures under various loads
- **CO 3:** Apply various principles to ascertain the character of materials under different loads
- **CO 4:** Evaluate the stability of various structures under different loading environments

Cours	se Learning Objectives: The student will be able to
1	Understand the concept of functions of several variables, types of derivatives involved with these functions and its applications, approximate a function of single variable in terms of infinite series.
2	Acquire concepts of vector functions, scalar fields and differential calculus of vector functions
	in Cartesian coordinates.
3	Explore the possibility of finding approximate solutions using numerical methods in the
	absence of analytical solutions of various systems of equations.
4	Recognize linear differential equations, apply analytical techniques to compute solutions.
5	Gain knowledge of multiple integrals and their applications.
6	Use mathematical IT tools to analyze and visualize the above concepts.

Taylor and Maclaurin series for function of single variable. Partial derivatives – Introduction, simple problems. Total derivative, composite functions. Jacobians – simple problems.

Unit – I

Unit – II	05 Hrs
Vector Differentiation:	
Introduction, simple problems in terms of velocity and acceleration. Concepts of gradient, div	ergence –

solenoidal vector function, curl – irrotational vector function and Laplacian, simple problems. Unit – III 06 Hrs

Differential Equations:

Higher order linear differential equations with constant coefficients, solution of homogeneous equations - Complementary functions. Non homogeneous equations –Inverse differential operator method of finding particular integral based on input function (force function).

Unit – IV	
Numerical Methods:	
Solution of algebraic and transcendental equations – Intermediate value property, Newton method. Solution of first order ordinary differential equations – Taylor series and 4 th orde Kutta methods. Numerical integration – Simpson's 1/3 rd , 3/8 th and Weddle's rules. (All without proof).	er Runge-
Unit – V	05 Hrs

Multiple Integrals:

Evaluation of double integrals, change of order of integration. Evaluation of triple integrals. Applications – Area, volume and mass – simple problems.

05 Hrs

Course	Course outcomes: On completion of the course, the student should have acquired the ability to					
CO 1:	Understand the concept of partial differentiation, double integrals, vector differentiation,					
	solutions of higher order linear differential equations and requirement of numerical methods.					
CO 2:	Solve problems on total derivatives of implicit functions, Jacobians, homogeneous linear					
	differential equations, velocity and acceleration vectors.					
CO 3:	Apply acquired knowledge to find infinite series expansion of functions, solution of non-					
	homogeneous linear differential equations and numerical solution of equations.					
CO 4:	Evaluate triple integrals, area, volume and mass, different operations using del operator on					
	scalar and vector point functions, numerical solution of differential equations and numerical					
	integration.

ಸ್ಥಳೀಯ ಅಥವಾ ಪ್ರಾದೇಶಿಕ ಭಾಷಾ ಕಲಿಕೆಯ ಅವಶ್ಯಕತೆ, ಭಾಷಾ ಕಲಿಕೆಯ ಸುಲಭ ವಿಧಾನಗಳು, ಸಂಭಾಷಣೆಗಾಗಿ ಸುಲಭ ಸೂಚ್ಯಗಳು ಕನ್ನಡ ಭಾಷೆಯ ಇತಿಹಾಸ.

ಅಧ್ಯಾಯ – II

4Hrs

ಕನ್ನಡ ಅಕ್ಷರಮಾಲೆ ಹಾಗೂ ಉಚ್ಛಾರಣೆ:

ಕನ್ನಡ ಅಕ್ಷರಮಾಲೆ, ಒತ್ತಕ್ಷರ, ಕಾಗುಣಿತ, ಉಚ್ಚಾರಣೆ, ಸ್ವರಗಳು ಉಚ್ಚಾರಣೆ, ವ್ಯಂಜನಗಳ ಉಚ್ಚಾರಣೆ.

ಅಧ್ಯಾಯ – III

4Hrs

ಸಂಭಾಷಣೆಗಾಗಿ ಕನ್ನಡ ಪದಗಳು:

ಸಂಭಾಷಣೆಯಲ್ಲಿ ಕನ್ನಡ ಬಳಕೆ:

ಏಕವಚನ, ಬಹುವಚನ, ಲಿಂಗಗಳು (ಸ್ತ್ರೀಲಿಂಗ, ಪುಲ್ಲಿಂಗ) ಪ್ರಶ್ನಾರ್ಥಕ ಪದಗಳು, ವಿರುದ್ಧಾರ್ಥಕ ಪದಗಳು, ಅಸಮಂಜಸ ಉಚ್ಚಾರಣೆ, ಸಂಖ್ಯಾ ವ್ಯವಸ್ಥೆ, ಗಣಿತದ ಚಿಹ್ನೆಗಳು, ಭಿನ್ನಾಂಶಗಳು.

ತರಕಾರಿಗಳ ಹೆಸರುಗಳು, ತಿಂಡಿಗಳ ಹೆಸರುಗಳು, ಆಹಾರಕ್ಕೆ ಸಂಬಂಧಿಸಿದ ಪದಗಳು, ಕಾಲ/ಸಮಯಕ್ಕೆ ಸಂಬಂಧಿಸಿದ ಪದಗಳು, ದಿಕ್ಕುಗಳ ಹೆಸರುಗಳು, ಭಾವನೆಗೆ ಸಂಬಂಧಿಸಿದ ಪದಗಳು, ಮಾನವ ಶರೀರದ ಭಾಗಗಳು, ಸಂಬಂಧದ ಪದಗಳು, ಸಾಮಾನ್ಯ ಸಂಭಾಷಣೆಯಲ್ಲಿ ಬಳಸುವಂತಹ ಪದಗಳು.

ಅಧ್ಯಾಯ	– IV
--------	------

4Hrs

ನಾಮಪದಗಳು, ಸರ್ವನಾಮಗಳು, ನಾಮವಿಶೇಷಣಗಳು, ಕ್ರಿಯಾಪದಗಳು, ಕ್ರಿಯಾವಿಶೇಷಣಗಳು, ಕನ್ನಡದಲ್ಲಿ ಸಂಯೋಜನೆಗಳು, ಉಪಸರ್ಗಗಳು, ಪ್ರಶ್ನಾರ್ಥಕ ಪದಗಳು, ವಿಚಾರಣೆಯ / ವಿಚಾರಿಸುವ / ಬೇಡಿಕೆಯ ವಾಕ್ಯಗಳು. ಕನ್ನಡದಲ್ಲಿ ಚಟುವಟಿಕೆಗಳು, ಶಬ್ದಕೋಶ, ಸಂಭಾಷಣೆ.

ವ್ಯವಹಾರಿಕ ಕನ್ನಡದ ಕಲಿಕಾ ಫಲಿತಾಂಶಗಳು :

బ	a
CO1:	ನಿತ್ಯ ಜೀವನದಲ್ಲಿ ಆಡುಭಾಷೆಯ ಬಳಕೆ.
CO2:	ಸಂದರ್ಭ, ಸನ್ನಿವೇಶಕ್ಕನುಗುಣವಾಗಿ ಸರಳ ಕನ್ನಡ ವಾಕ್ಯಗಳ ಬಳಕೆ.
CO3:	
CO4:	ಇತರರೊಡನೆ ಸುಲಭ ಸಂವಹನ.

ಆಧಾರ ಪುಸ್ತಕಗಳು :

1	್ತು ವ್ಯವಹಾರಿಕ ಕನ್ನಡ ಪಠ್ಯಪುಸ್ತಕ, ಎಲ್.ತಿಮ್ಮೇಶ್ ಮತ್ತು ವಿ.ಕೇಶವಮೂರ್ತಿ, ಪ್ರಸಾರಾಂಗ, ವಿಶ್ವೇಶ್ವರಯ್ಯ ತಾಂತ್ರಿಕ ವಿದ್ಯಾಲಯ, ಬೆಳಗಾಂ.
2	ಕನ್ನಡ ಕಲಿ, ಕೆ.ಎನ್.ಸುಬ್ರಹ್ಮಣ್ಯಂ, ಎನ್.ಎಸ್.ನರಹರಿ, ಎಚ್.ಜಿ.ಶ್ರೀನಿವಾಸ 'ಪ್ರಸಾದ್, ಎಸ್.ರಾಮಮೂರ್ತಿ ಮತ್ತು ಎಸ್.ಸತ್ಯನಾರಾಯಣ, 2ನೇ ಮುದ್ರಣ 2019, ರಾ.ವಿ.ತಾಂತ್ರಿಕ ಮಹಾವಿದ್ಯಾಲಯ, ಬೆಂಗಳೂರು.
3	ಮಾತನಾಡುವ ಕನ್ನಡ, ಕನ್ನಡ ಸಾಹಿತ್ಯ ಪರಿಷತ್, ಬೆಂಗಳೂರು.

Continuous Internal Evaluation (CIE); (50 Marks)

CIE is executed by way of quizzes (Q), tests (T) and Activity. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks and the sum of the marks scored from two quizzes is reduced to 10. The two tests are conducted for 50 marks each and the sum of the marks scored from two tests is reduced to 30. The marks component for Activity is 10. Total CIE is 10(Q) + 30(T) + 10(A) = 50 Marks.

Semester End Evaluation (SEE); Theory (50 Marks)

SEE for 50 marks executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 25 marks covering the complete syllabus. Part – B consists of essay type questions, one from each unit for 5 marks adding up to 25 marks.

Continuous Internal Evaluation (CIE); (50 Marks)

CIE is executed by way of quizzes (Q), tests (T) and Activity. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks and the sum of the marks scored from two quizzes is reduced to 10. The two tests are conducted for 50 marks each and the sum of the marks scored from two tests is reduced to 30. The marks component for Activity is 10. Total CIE is 10(Q) + 30(T) + 10(A) = 50 Marks.

Semester End Evaluation (SEE); Theory (50 Marks)

SEE for 50 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 10 marks covering the complete syllabus. Part – B is for 40 marks. It consists of essay type questions. Student has to answer any 4 questions out of 5 questions, each question carries 10 marks.

Semester: IV						
	ENGINEERING MATHEMATICS – IV					
			(Theory)			
		(Co	mmon to AS, CH, CV & ME)			
Course Code	:	18MA41C	CIE	:	100 Marks	
Credits: L:T:P	Credits: L:T:P : 4:1:0 SEE : 100 Marks					
Hours	:	52L+13T	SEE Duration	••	3.00 Hours	

Cou	rse Learning Objectives: The student will be able to
1	Understand practical situations in various areas of engineering and science to formulate linear
1	programming problems to get optimum solution.
2	Apply the knowledge of differential and integral calculus to functions of complex variables.
3	Analyze the set of data and fit suitable approximating curves.
4	Interpret concept of probability to solve random physical phenomena and implement the proper
4	distribution model.
5	Use mathematical IT tools to analyze and visualize the above concepts.

	Unit-I	10 Hrs
Linea	r Programming:	
	matical formulation of Linear Programming Problem (LPP). Solving LPP using G	raphical,
Simple	ex and Big M methods. Exploring optimization techniques using MATLAB.	
	Unit –II	11 Hrs
Comp	lex Analysis:	
Analy	ic function - Cauchy-Riemann equations in Cartesian and polar forms, harmonic f	unctions.
Constr	uction of analytic functions by Milne-Thomson method. Complex potential, str	eam and
.	ial functions. Complex integration - Cauchy's theorem, Taylor's and Laurent'	s series,
singula	arities, poles, residues, residue theorem, problems (all theorems without proof).	
	Unit –III	11 Hrs
Statist	ics:	
Centra	l moments, mean, variance, coefficients of skewness and kurtosis in terms of moment	s. Curve
	by method of least squares, fitting of curves - polynomial, exponential and power f	
Correl	ation and linear regression analysis, application problems. Simulation using MATLAE	
	Unit –IV	10 Hrs
Proba	bility and Distributions:	
Rando	m variables - discrete and continuous. Probability distribution function, cu	mulative
distrib	ution function. Binomial, Poisson, Exponential and Normal distributions. Simulati	on using
MATI		
	Unit –V	10 Hrs
Joint 1	Probability Distribution and Markov Chain:	
	listribution of random variables - Expectation, covariance and correlation. Markov	
Stocha	stic matrices, higher transition probabilities, regular stochastic matrices, probability ve	ector.
Cours	e Outcomes: After completing the course, the students will be able to	
CO1	Understand the concept of linear programming problems (LPP), analytic functions, s	statistical
	measures, curve fitting and random variables.	
CO2	Solve problems on LPP graphically, analytic functions, correlation between two	variables
	and probability distribution functions.	
COD		
CO3	Apply gained knowledge for curve fitting, solution of LPP using simplex method,	Taylor's
	Apply gained knowledge for curve fitting, solution of LPP using simplex method, and Laurent's series and different distributions.	Taylor's

CO4 Estimate optimal solution of LPP using Big M method, regression lines, residues and regular

stochastic	matrices.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and experiential learning (EL). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for experiential learning is 20. **Total CIE is 30(Q) + 50(T) + 20(EL) = 100 Marks.**

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

	Semester: IV							
	AERODYNAMICS							
	(Theory & Practice)							
Course Code	:	18AS43		CIE	:	100+50 Marks		
Credits: L:T:P	:	3:0:1		SEE	:	100 +50 Marks		
Hours	:	39L+32.5P		SEE Duration	:	3.00+3.00 Hours		

Course Learning Objectives: To enable the students to:

1	Extend the fundamentals of fluid mechanics to analyze different aerodynamic problems

- 2 Understand the importance of potential flows in assessing the flows over various bodies
- Assess the behaviour of various airfoils and wings subjected to incompressible flows 3
- 4 Familiarize with types of wind tunnels, instrumentation and measurement techniques

Unit-I 09 Hrs Fundamentals of Aerodynamics : Basic Governing Equations: Continuity, Momentum, Energy and Navier-Stokes equation, Angular velocity, Vorticity, Strain, Circulation, Stream Function, Velocity Potential, Coefficient of Pressure, Pressure Distribution on Airfoil.

Unit -II Potential Flows : Governing Equation: Laplace Equation, Uniform flow, Source flow, Sink flow, Combination of a uniform flow with source and sink, Doublet flow, Non-lifting flow over a circular cylinder, Vortex flow, Lifting flow over a circular cylinder, Kutta-Joukowski theorem and generation of Lift, D'Alembert's paradox.

Unit -III 07 Hrs Incompressible Flow over Airfoils: Airfoil characteristics, Vortex Sheet, The Kutta Condition, Kelvin's circulation theorem and the starting vortex, Classical thin airfoil theory for symmetric Airfoil and cambered airfoil, Effect of Airfoil Thickness, Camber on the Airfoil Aerodynamic Characteristics.

Unit -IV	08 Hrs
Incompressible Flow Over Finite Wings : Downwash and induced drag on wing	gs, Vortex
Filament, Biot-Savart law and Helmholtz's theorems, Infinite and semi-infinite vortex	filament,
Prandtl's classical lifting line theory, Limitations of Prandtl's lifting line theory, Lifti	ng surface
theory: Vortex Lattice Method, Panel Method.	-

Unit -V						
Introduction to Aerodynamic Testing: Flow Similarity, Principles of wind tunnel operative	tion: Low					
speed, Transonic, supersonic and Hypersonic wind tunnels, Measurement Techniques	in Wind					
Tunnels: Pressure Measurements, Force Balance, Hot wire anemometer.						

LABORATORY EXPERIMENTS

- 1. Calibration of a subsonic wind tunnel
- 2. Smoke flow visualization studies on a two-dimensional bluff and streamlined bodies at low speeds.
- 3. Tuft flow visualization on a wing model at different angles of incidence at low speeds.
- 4. Surface pressure distributions on a two-dimensional circular cylinder at low speeds and calculation of pressure drag
- 5. Surface pressure distributions on a two-dimensional symmetric airfoil at zero incidences at low speeds
- 6. Surface pressure distributions on a two-dimensional cambered airfoil at different angles of

09 Hrs

incidence and calculation of lift and pressure drag.

- 7. Calculation of total drag of a two-dimensional circular cylinder at low speeds using pitot-static probe wake survey technique
- 8. Calculation of total drag of a two-dimensional cambered airfoil at low speeds at incidence using wake survey technique
- 9. Measurement of typical wall boundary layer characteristics
- 10. Measurement of turbulence intensity using hot wire anemometer
- 11. Measurement of flow angularity

Study of potential flow using Hele-Shaw Apparatus

Course Outcomes:

At the end of this course the student will be able to :

CO 1:	Apply the principles of Fluid Mechanics in designing & developing highly efficient aerodynamic bodies
CO 2:	Signify the role of various fundamental potential flows in assessing the aerodynamic behaviour of various bodies
CO 3:	Determine the Aerodynamic characteristics of airfoils and wings subjected to incompressible flows
CO 4:	Evaluate aerodynamic performance characteristics of various aerodynamic bodies using wind tunnel measurement techniques

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and experiential learning (EL). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for experiential learning is 20.

Total CIE is 30(Q) +50(T) +20(EL) =100 Marks.

Scheme of Continuous Internal Evaluation (CIE); Practical Test for 50 Marks

The Laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average marks (AM) over number of weeks is considered for 30 marks. At the end of the semester a test (T) is conducted for 10 marks. The students are encouraged to implement additional innovative experiments (IE) in the lab and are rewarded for 10 marks. Total marks for the laboratory is 50.

Total CIE is 30(AM) +10 (T) +10 (IE) =50 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part A and Part B. Part A consists of objective type questions for 20 marks covering the complete syllabus. Part B consists of five main questions, one from each unit for 16

marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Scheme of Semester End Examination (SEE); Practical Exam for 50 Marks

SEE for the practical courses will be based on experiment conduction with proper results, is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

Semester End Evaluation (SEE): Theory (100 Marks) + Practical (50 Marks) = Total 150 Marks

AEROSPACE STRUCTURES								
(Theory & Practice)								
Course Code	:	18AS44		CIE	:	100+50 Marks		
Credits: L:T:P	:	3:0:1		SEE	:	100 +50 Marks		
Hours	:	39L+32.5P		SEE Duration	:	3.00+3.00 Hours		

Course Learning Objectives: To enable the students to:

1	Assess load characteristics on different aerospace structures and suggest suitable design considerations
2	Understand and comprehend behaviour of aerospace structures under different loading conditions

- **3** Quantitatively analyse the loads acting on the fuselage and the wings
- 4 Design effective solutions for practical problems

Unit-I08 HrsLoads on Aircrafts: Structural nomenclature, Load Factors, Wing Design Loads, Empennage Loads,
and Fuselage loads, Propulsion Loads, landing gear loads, Miscellaneous loads, Velocity diagram V-
n diagram for the loads acting on the aircraft, salient features of the V-n diagram. Flight envelope for
different flying conditions

Unit -II	09 Hrs
Shear Flow in Open & Closed Sections: Open Sections: Concept of shear flow, Shear Flo	w in Thin
walled beams, the shear centre and Elastic axis.	
Closed Sections: Bredt - Batho theory, shear centre of closed sections, Torsion of closed se	ction box
beams, shear flow in closed section box beams	

Unit -III					
Buckling of Columns : Introduction, Critical Load, Euler's Critical Load for various end conditions,					
Slenderness ratio, Rankine's Crippling Load, Design of columns under centric and eccentric	ric loading				
Unit -IV	07 Hrs				
Design of Aircraft Structures: Design criteria, Safety Factor, Life Assessment procedures, Damage					
tolerance and Fail safe Design. High strain rate response of materials, creep and fatigue failure in					
aircraft components					

Unit -V07 HrsBolted Riveted and Welded Connections: Failure of single bolt fitting, Lug strength analysis under
Axial, Transverse and Oblique Loading, Riveted Connections, Welded Connections.

LABORATORY EXPERIMENTS

- 1. Measurement of Creep rates at room temperature in Aerospace Alloys
- 2. Measurement of Creep rates at elevated temperature in Aerospace Alloys
- 3. Characterization of Aerospace Alloys under impact velocity
- 4. Energy absorbed of axial structures under an impact velocity
- 5. Geometry cleanup for FE modelling
- 6. 2D Meshing of Aerospace Component
- 7. Solid and 3D meshing of Aerospace Component
- 8. Failure of a circular plate subjected to the impact of an infinite rigid sphere
- 9. Introduction on how to simulate a bird strike on the windshield
- 10. Study of the stress wave propagation and the strain rate effect on the Hopkinson bar
- 11. Topology Optimization of Aerospace Components
- 12. Shape Optimization of Aerospace Components

	Course Outcomes: At the end of this course the student will be able to :							
CO 1:	1: Understand and comprehend the loading behaviour on aircrafts.							
CO 2:	Develop solutions to analyse the structures response to load.							
CO 3:	03: Assess the influence of shear flow in open and closed sections							
CO 4:	Quantitatively analyse the loads acting on the fuselage and the wings

Semester: VI											
ELECTRONICS & COMMUNICATION SYSTEMS											
	(Theory)										
Course Code	:	18AS45		CIE	:	100 Marks					
Credits: L:T:P	:	3:0:0		SEE		100 Marks					
Hours	:	39L		SEE Duration	:	3.00 Hours					

Course Learning Objectives: To enable the students to:

- **1** Acquire In-depth knowledge of Electronic components and circuits as modules
- 2 Understand the Fundamentals of Analog & Digital Communication.
- 3 Acquire In-depth knowledge of Digital Communication Techniques.
- 4 Understand the Manufacturing of Electronic components and circuits as modules.

Unit-I	09 Hrs
Electronic Circuits: Basics of Semiconductors; Diode/Transistor basics and characteristic	cs; Diodes
for different uses; Junction & Field Effect Transistors (BJTs, JFETs, MOSFETs);	Transistor
amplifiers of different types, oscillators and other circuits; Basics of Integrated Circu	uits (ICs);
Bipolar, MOS and CMOS ICs; Basics of linear ICs, operational amplifiers and their ap	plications-
linear/non-linear; Optical sources/detectors; Basics of Optoelectronics and its applications.	
Analysis/design of Amplifiers, Oscillators, Mixers & Modulators / Demodulators - sir	ngle/multi-
stage; Feedback & uses; Active filters, Timers, Multipliers, Wave shaping, A/D-D/A c	converters;
Boolean Algebra& uses; Logic gates, Digital IC families, Combinatorial/sequential circuits	; Basics of
multiplexers, counters/registers/ memories /microprocessors, design& applications.	

Unit -II	09 Hrs									
Electronic Manufacturing: Crystal structure & defects; Ceramic materials-structures, composites,										
processing and uses; Insulating laminates for electronics, structures, properties and uses; Magnetic										
materials, basics, classification, ferrites, ferro/para-magnetic materials and compone	ents; Nano									
materials-basics, preparation, purification, sintering, nanoparticles and use	s; Nano-									
optical/magnetic/electronic materials and uses; Superconductivity, uses.										

VLSI Technology: Processing, lithography, interconnects, packaging, testing; VLSI design: Principles, MUX/ROM/PLA-based design, Moore & Mealy circuit design; Pipeline concepts & functions; Design for testability, examples.

Unit -III	08 Hrs						
Elements of Communication Systems: Definition of Signal & System, Types of Signals,							
Classification of Signals, Classification of Systems; Signals – Amplitude, Frequency & Phase. Gain,							
Attenuation & Decibels; Tuned Circuits & Filters, Electromagnetic Spectrum; Basics of E	M Wave,						
Polarization, Types of Polarization, Noise; Modulator / Demodulator, Transmitter/Receiv	ver, Phase						
lock loop demodulator.							
Propagation of EM Waves: Different mode of radio wave Propagation, surface wave tre	oposphere						
duct Propagation, Tropo-scatter Propagation, ionosphere Propagation, magneto-ionic the	ory secant						
law, MUF, critical frequency, skip distance.							
Transmission lines & Antenna: Oscillating dipole: Electromagnetic radiation, retarding	potential,						
Antenna parameters: directivity, beam width, gain, radiation, thin linear antenna, loop anter	enna, long						
wire antenna, rhombic antenna. Antenna array: broadside and fire array, pattern mult	iplication,						
Ground proximity effect, Two and Three-dimensional arrays. Array pattern synthesis:	Binomial						
array, Techebyshev array. Broadband antenna: Yagi-Uda array, log periodic array, disc	c one and						
helical antenna turn style antenna. Aperture antenna, abinet's principle.							

Unit -IV							
Analog and Digital Communication Systems: Random signals, noise, probabilit	y theory,						
information theory; Analog versus digital communication & applications: Systems-	AM, FM,						

transmitters/receivers, theory/practice/ standards, SNR comparison. **Digital Communication Basics**: Sampling, quantizing, coding, PCM, DPCM, multiplexingaudio/video; Digital modulation: ASK, FSK, PSK; Multiple access: TDMA, FDMA, CDMA. **Digital Signal Processing**: Discrete time signals/systems, uses; Digital filters: FIR/IIR types, design, speech/audio/radar signal processing uses. **Embedded systems**.- Introduction & Concepts

Unit -V	6 Hrs						
Components of Microwave Communication: Wave Guides: Rectangular and circular type, TE and							
TM waves in wave guides, their transmission properties and attenuation. Transmission line of wave							
guide, Wave guide resonator, loaded and unloaded, Q. Dielectric slab wave guide.							
Microwave generation and amplification: Two-cavity klystron, Magnetron, TWT ampl	lifier, solid						
state parametric amplifier, Tunnel diode amplifier and oscillator, Gno oscillator,	IMPATT,						
TRAPATT AND Baritt, oscillator, Maser.							
Microwave components: Adaptor, Attenuator, Directional coupler, Tee, Wave meter,	Circulator,						
filter, TR and ATR cells.							
Microwave Antenna: Open wave-guide, Horn, Parabolic Reflector and its feed, Cassegrain antenna,							
wave-guide, slot array, lens antenna. Receiving antenna: reciprocity theorem, effective ape	rture. Friss						
transmission formula, antenna noise temperature. noise temperature.							

Course Outcomes:

At the end of this course the student will be able to :

CO 1:	Summarize importance of electronic devices and their applications in communication
	systems.
CO 2:	Explain the process of E M Wave propagation and its application in Radar &
	Communication.
CO 3:	Understand the processes of manufacturing electronics & microwave devices.
CO 4:	Develop understanding for different types of communicational techniques.

AEROSPACE MANUFACTURING TECHNOLOGY									
			(Theory & Practic	e)					
Course Code	:	18AS46		CIE	:	100+50 Marks			
Credits: L:T:P	:	3:0:1		SEE	:	100 +50 Marks			
Hours	:	39L+32.5P		SEE Duration	:	3.00+3.00 Hours			

Cou	rse Learning Objectives: To enable the students to:

- 1 Acquire knowledge of limits, fits and tolerances
- 2 Understand the processes of casting, forging and extrusion
- **3** Familiarise with numerous machining and Finishing operations employed in the manufacturing industries.
- 4 Outline the different types of sheet metal processes
- 5 Identify and utilize suitable fabrication technique for a given application

	-
Unit-I	08 Hrs
Limits, Fits and Tolerances: Introduction, Concept of interchangeability, Selective	assembly,
System Assembly, System Terminologies, Limits and Tolerances, Systems of Fit, G	eometrical
Tolerances, Types of Gauges	
Casting Processes: Types of Pattern, Moulding Material and Properties, Sand moulding, C	Centrifugal
casting, Pressure casting, Continuous casting; Advantages, Die Casting, Investment	t Casting,
Evaporative Pattern Casting, Application in aerospace	-
Unit – II	08 Hrs
Metal Cutting: Orthogonal and Oblique Cutting, Mechanics of Chip Formation, Types	of Chips,
Merchants theory, Thermodynamics in Metal Cutting, Cutting Parameters- Materials &	
and Tool Life, Machining of Various Metals Used in aerospace materials-Aluminium,	Titanium,
Steel-composite.	
Unit -III	08 Hrs
Sheet Metal Working: Shearing mechanism, Processes like blanking, piercing, punching,	trimming.
Forming processes like bending, cup drawing, coining, embossing. Presses for sheet meta	l working;
Part feeding systems; Elements of die; punch and die clearances; Progressive, com	•
combination dies. High energy rate forming processes. Applications of sheet formed p	
Aerospace	
Powder Metallurgy: Introduction. Production of metal powders. Compaction and	sintering
processes. Secondary and finishing operations. Economics, advantages, and applications	-
metallurgy in Aerospace Parts.	1
Unit -IV	07 Hrs
Processing of Composite: Role of Composites in Major Aircraft Components, Hand Layu	p Machine
Layup, Filament Winding, Tape Lamination, Fiber Placement, Drape Forming, Liquid	Composite
Molding -Resin Transfer Molding, Vacuum-Assisted RTM, Resin Film Infusion, Pultrusior	
Unit -V	08 Hrs
Welding & Joining Technologies: Types of Electrodes, specification of electrodes	, Friction
Welding (Rotary, Linear, Friction-Stir Welding) Types of Welding -Laser, Electron B	
MIG, Welding Defects.	
Surface Technology: Surface Smoothing, Surface Cleaning, Surface Protection, Roll Burn	ishing and
Bollizing Doburring	C

Ballizing, Deburring. Advanced Manufacturing Processes: Rapid Prototyping, Direct Metal Deposition, Fine blanking, Immersive Virtual Reality.

LABORATORY EXPERIMENTS PART-I SAND TESTING, FOUNDRY & FORGING

- Preparation of Green Sand Mould specimen and determination of Mechanical Properties using Universal Sand Testing Machine
- 2. Determination of Permeability of Green Sand.
- 3. Forging and Microstructural analysis of mild steel
- 4. Composite Preparation using Hand Lay-up Process
- 5. Preparation of moulds using two moulding boxes With Patterns

Without Patterns

PART -- II MACHINING PROCESS

- Preparation of Model Involving different lathe operation Thread Cutting Knurling
- 7. Measurement of Cutting Forces using Lathe Tool Dynamometer
- 8. Surface Milling & Step Milling in Vertical Milling Machine

PART-III METROLOGY

- 9. Measurement of Angle using Sine Bar, Sine Centre and Bevel Protractor
- 10. Measurement of Gear Tooth Profile using Profile Projector
- 11. Calibration of LVDT and Thermocouple
- 12. Calibration of Load Cell and Pressure Gauge

DEMONSTRATION EXERCISES

- 13. Electric Discharge Machining & Rapid Prototyping Process
- 14. Tungsten Inert-Gas Welding
- Preparation of Casting. (Aluminum or Cast iron)

Course Outcomes:

At the end of this course the student will be able to :

CO 1:	Comprehend the concept of Limits, Fits and tolerances and their influence in manufacturing											
	processes.											
CO 2:	Design and examine the influence of stresses developed during the metal cutting and Heat											
	Treatment.											
CO 3:	Classify and categorize Composite Manufacturing with respect to different processes.											
CO 4:	Analysing various Welding technologies and Advanced Manufacturing Process											
	implemented in the Aerospace industries

Guidelines for Design Thinking Lab:

- 1. The Design Thinking Lab (DTL) is to be carried out by a team of two-three students.
- 2. Each student in a team must contribute equally in the tasks mentioned below.
- 3. Each group has to select a theme that will provide solutions to the challenges of societal concern. Normally three to four themes would be identified by the by the department
- 4. Each group should follow the stages of Empathy, Design, Ideate, prototype and Test for completion of DTL.
- 5. After every stage of DTL, the committee constituted by the department along with the coordinators would evaluate for CIE. The committee shall consist of respective coordinator & two senior faculty members as examiners. The evaluation will be done for each student separately.
- 6. The team should prepare a Digital Poster and a report should be submitted after incorporation of any modifications suggested by the evaluation committee.

The Design Thinking lab tasks would involve:

- 1. Carry out the detailed questionnaire to arrive at the problem of the selected theme. The empathy report shall be prepared based on the response of the stake holders.
- 2. For the problem identified, the team needs to give solution through thinking out of the box innovatively to complete the ideation stage of DTL
- 3. Once the idea of the solution is ready, detailed design has to be formulated in the Design stage considering the practical feasibility.
- 4. If the Design of the problem is approved, the team should implement the design and come out with prototype of the system.
- 5. Conduct thorough testing of all the modules in the prototype developed and carry out integrated testing.
- 6. Demonstrate the functioning of the prototype along with presentations of the same.
- 7. Prepare a Digital poster indicating all the stages of DTL separately. A Detailed project report also should be submitted covering the difficulties and challenges faced in each stage of DTL.
- 8. Methods of testing and validation should be clearly defined both in the Digital poster as well as the report.

The students are required to submit the Poster and the report in the prescribed format provided by the department.

Course	Course Outcomes: After completing the course, the students will be able to						
CO 1:	Interpreting and implementing the empathy, ideate and design should be implemented by						
	applying the concepts learnt.						
CO 2:	The course will facilitate effective participation by the student in team work and						
	development of communication and presentation skills essential for being part of any of						
	the domains in his / her future career.						
CO 3:	Appling project life cycle effectively to develop an efficient prototype.						
CO 4:	Produce students who would be equipped to pursue higher studies in a specialized area						
	or carry out research work in an industrial environment.						

Scheme of Evaluation for CIE Marks:

Evaluation will be carried out in three phases:

Phase	Activity	Weightage
Ι	Empathy, Ideate evaluation	10M
II	Design evaluation	15M
III	Prototype evaluation, Digital Poster presentation and report submission	25M
	Total	50M

Scheme of Evaluation for SEE Marks:

Sl. No.	Evaluation Component						
1.	Written presentation of synopsis: Write up	5M					
2.	Presentation/Demonstration of the project	15M					
3.	Demonstration of the project	20M					
4.	Viva	05M					
5.	Report	05M					
	Total	50M

Programming Constructs

Decision Making and Branching

Decision making with 'if' statement, Simple 'if' statement, the 'if...else' statement, nesting of 'if...else' statements, The 'else if' ladder, The 'switch' statement, The '?:' operator, The 'goto' statement.

Decision making and looping The while statement, The do while statement, The 'for' statement, Jumps in loops.

Unit – IV 6	Hrs
-------------	-----

Arrays

One dimensional arrays, Declaration of one dimensional arrays. Initialization of one dimensional arrays, Two dimensional arrays, Initializing two dimensional arrays.

Character Arrays and Strings

Declaring and Initializing String Variables, Reading Strings from Terminal, Writing strings to screen, String handling functions.

Unit – V	8 Hrs
User-defined functions	

Need for User Defined Functions, Definition of functions, Return values and their types, Function calls, Function declaration. Examples.

Introduction to Pointers: Introduction, Declaration and initialization of pointers. Examples **Structures and Unions:** Introduction, Structure and union definition, Declaring structure and union variables, Accessing structure members. Example programs.

	PRACTICE PROGRAMS
1.	Familiarization with programming environment, concept of naming the program files,
	storing, compilation, execution and debugging. Taking any simple C- code.(Example
	programs having the delimeters, format specifiers in printf and scanf)
2.	Debug the errors and understand the working of input statements in a program by compiling
	the C-code.
3.	Implement C Program to demonstrate the working of operators and analyze the output.
4.	Simple computational problems using arithmetic expressions and use of each
	operator (+,-,/,%) leading to implementation of a Commercial calculator with
	appropriate message:
	a)Read the values from the keyboard
	b) Perform all the arithmetic operations.
	c) Handle the errors and print appropriate message.
5.	Write a C program to find and output all the roots if a given quadratic equation, for
	non-zero coefficients. (Using if <i>else</i> statement).
6a.	Write a C program to print out a multiplication table for a given NxN and also to print the
	sum table using skip count 'n' values for a given upper bound.
6b.	Write a C program to generate the patterns using for loops.
	Example: (to print * if it is even number)
	1 **
	333

	55555
7a.	Write a C program to find the Greatest common divisor(GCD)and Least common multiplier(
	LCM)
7b.	Write a C program to input a number and check whether the number is palindrome or not.
8.	Develop a C program for one dimensional, demonstrate a C program that reads N integer
	numbers and arrange them in ascending or descending order using bubble sort technique.
9.	Develop and demonstrate a C program for Matrix multiplication:
	a) Read the sizes of two matrices and check the compatibility for multiplication.
	b) Print the appropriate message if the condition is not satisfied and ask user to re-enter the size of matrix.
	c) Read the input matrix
	d) Perform matrix multiplication and print the result along with the input matrix.
10.	Using functions develop a C program to perform the following tasks by parameter passing
	concept:
	a) To read a string from the user
	Print appropriate message for palindrome or not palindrome

11a.1	Write a	C program to find the length of the string without using library function.				
1b.	Write a program to enter a sentence and print total number of vowels.					
12.	Design	a structure 'Complex' and write a C program to perform the following operations:				
	i.	Reading a complex number.				
	ii.	Addition of two complex numbers.				
	iii.	Print the result				
13.	Create	a structure called student with the following members student name, rollno, and a				
	structu	re with marks details in three tests. Write a C program to create N records and				
	a)	Search on roll no and display all the records.				
	b)	Average marks in each test.				
	c)	Highest marks in each test				

Course Outcomes: After Completing the course, the students will be able to

CO 1:	Understand and explore the fundamental computer concepts and basic programming
	principles like data types, input/output functions, operators, programming constructs and
	user defined functions.
CO 2:	Analyze and Develop algorithmic solutions to problems.
CO 3:	Implement and Demonstrate capabilities of writing 'C' programs in optimized, robust
	and reusable code.
CO 4:	Apply appropriate concepts of data structures like arrays, structures implement programs
	for various applications

Continuous Internal Evaluation (CIE); Theory (50 Marks)

CIE is executed by way of quizzes (Q), tests (T) and lab practice (P). A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks the sum of the marks scored from quizzes would be reduced to 10 marks. The two tests are conducted for 30 marks each and the sum of the marks scored from two tests is reduced to 30. The programs practiced would be assessed for 10 marks (Execution and Documentation).

Total CIE is 10(Q) + 30(T) + 10(P) = 50 Marks.

Semester End Evaluation (SEE); Theory (50 Marks)

SEE for 50 marks is executed by means of an examination. The Question paper for the course consists of five main questions, one from each unit for 10 marks adding up to 50 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units

INNER BACK COVER PAGE

PROGRAM OUTCOMES (POs)

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation for the solution of complex engineering problems.

2. **Problem analysis:** Identify, formulate, research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety, and cultural, societal, and environmental considerations.

4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modelling to complex engineering activities, with an understanding of the limitations.

6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with the society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. Life-long learning: Recognise the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
