I Semester					
	APPLIED MATHEMATICS				
(Common to MPD, M	(Common to MPD, MMD, MCM, MPE, MBT, MBI, MCH, MST, MHT)				
Course Code: 18MAT11A		CIE Marks: 100			
Credits: L:T:P:: 4:0:0		SEE Marks: 100			
Hours: 47		SEE Duration: 3Hrs			

Course Learning Objectives (CLO):

Students are able to:

- 1. Adequate exposure to learn statistical techniques, random phenomena for analyzing data to find the suitable mathematical/probability models for solving practical situation in engineering applications.
- 2. To learn fundamentals of linear algebra, solution of system of linear equations and eigen value problems used in various fields of engineering and science.
- 3. Explore the possibility of finding approximate solutions using numerical methods in the absence of analytical solutions of various systems.
- 4. Apply the concepts of optimization to solve engineering applications of optimization which have great importance in the field of engineering.

Unit-I	09 Hrs
Statistics:	
Method of least squares, fitting of straight line, linearization of nonlinear laws, curve t	fitting by
polynomials, correlation, coefficient of correlation, lines of regression, Spearman rank correl	•••
Unit-II	09 Hrs
Probability distributions:	•
Introduction to probability, Random variables-discrete and continuous random variables,	important
measures and moment generating functions, Standard distributions-Binomial, Exponential	, Ñormal
and Gamma distributions.	
Unit -III	09 Hrs
System of linear equations and eigen value problems:	
System of linear equations-LU decomposition and Gauss-Jordan method, Eigen value p	roblems-
bounds on eigen values, Power method and Inverse Power method, Eigen values and eigen v	vectors of
real symmetric matrices-Jacobi method.	
Unit -IV	10 Hrs
Numerical solution of differential equations:	
Boundary value problems (IVP & BVP)-finite difference method for linear and nonlinear	problems,
Shooting method and Galerkin method. Finite difference methods for parabolic, ell	iptic and
hyperbolic partial differential equations, Finite element method and simple problems.	
Unit -V	10 Hrs
Engineering optimization:	
Engineering applications of optimization, statement of an optimization problem-design vector	or, design
constraints, constraint surface, objective function and objective function surface. Mul	
optimization with inequality constraints-Kuhn-Tucker conditions, Constraint qualification	, Genetic
operators, Neural-Network-based Optimization. Optimization of Fuzzy systems.	

Course outcomes (CO):

On completion of the course, the student should have acquired the ability to

CO1: Identify and interpret the fundamental concepts of statistics, distributions, linear algebra, differential equations and optimization arising in various fields engineering.

CO2: Apply the knowledge and skills of statistical/numerical/optimization techniques to solve problems of least squares, probability distributions, linear equations, eigen value problems and differential equations.

CO3: Analyze the physical problem to establish statistical/mathematical model and use appropriate method to solve and optimize the solution.

CO4: Distinguish the overall mathematical knowledge gained to demonstrate the problems of least squares, probability distributions, linear equations, eigen value problems, differential equations and optimization arising in practical situations.

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks):

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) Solving innovative problems 2) Seminar/new developments in the related course 3) Laboratory/ field work 4) mini project. **Total CIE is 20+50+30 = 100 marks**.

Scheme of Semester End Examination (SEE) for 100 marks:

Scheme of Continuous Internal Evaluation (CIE): Theory for 100 Marks

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) solving innovative problems 2) seminar/new developments in the related course 3) Laboratory/field work 4) mini project. **Total CIE is 20+50+30=100 Marks.**

Scheme of Continuous Internal Evaluation (CIE): Practical Test for 50 Marks

The Laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average of marks over number of weeks is considered for 30 marks. At the end of the semester a test is conducted for 10 marks. The students are encouraged to implement additional innovative experiments in the lab and are rewarded for 10 marks. Total marks for the laboratory is 50.

Scheme of Semester End Examination (SEE): Theory for 100 marks

The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Scheme of Semester End Examination (SEE); Practical Exam for 50 Marks

SEE for the practical courses will be based on experiment conduction with proper results, is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

Semester End Evaluation (SEE): Theory (100 Marks) + Practical (50 Marks) = Total 150 Marks

CIE is executed by way of tests and assignments. Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 75. Five assignments are given for 10 marks each and the sum of the marks scored from five assignments is reduced to 25.

Total CIE is 75+25=100 Marks

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The question paper consists of two questions carrying 100 marks for the design and detailed sketch of equipment. Student is required to answer any one. There shall not be split of equipments among the questions.

Scheme of Continuous Internal Examination (CIE) Evaluation of CIE will be carried out in TWO Phases.

Phase	ase Activity		
Ι	After 9 hours of training program, students are required to undergo a test set for a total of 50 marks. The structure of the test will have two parts. Part A will be quiz based evaluated for 15 marks and Part B will be of descriptive type, set for 50 Marks and reduced to 35 marks. The total marks for this phase will be 50 ($15 + 35$).		
II	Similarly students will have to take up another test after the completion 18 hours of training. The structure of the test will have two parts. Part A will be quiz based evaluated for 15 marks and Part B will be of descriptive type, set for 50 Marks and reduced to 35 marks. The total marks for this phase will be $50 (15 + 35)$.		
	FINAL CIE COMPUTATION		
the two	Continuous Internal Evaluation for this course will be based on the average of the score attained through the two tests. The CIE score in this course, which is a mandatory requirement for the award of degree, must be greater than 50%. Needless to say the attendance requirement will be the same as in any other

Scheme of Continuous Internal Evaluation (CIE): Theory for 100 Marks

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) solving innovative problems 2) seminar/new developments in the related course 3) Laboratory/field work 4) mini project. **Total CIE is 20+50+30=100 Marks.**

Course outcomes:

After completion of the course student will be able to: CO1: Recall the fundamentals of fluid flow, heat transfer, insulation and corrosion. CO2: Calculate pressure losses in pipes and describe the different methods for determining the pipe size. CO3: Apply the concept of fluid flow, heat transfer, insulation and corrosion for design of pipelines. CO4: Compare and distinguish amongst various alloying elements, materials of construction, pipe fittings, supports, expansion devices and materials of insulation.

Scheme of Continuous Internal Evaluation (CIE): Theory for 100 Marks

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) solving innovative problems 2) seminar/new developments in the related course 3) Laboratory/field work 4) mini project.

Total CIE is 20+50+30=100 Marks.

Scheme of Continuous Internal Evaluation (CIE): Practical Test for 50 Marks

The Laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average of marks over number of weeks is considered for 30 marks. At the end of the semester a test is conducted for 10 marks. The students are encouraged to implement additional innovative experiments in the lab and are rewarded for 10 marks. Total marks for the laboratory is 50.

Scheme of Semester End Examination (SEE): Theory for 100 marks

The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Scheme of Semester End Examination (SEE); Practical Exam for 50 Marks

SEE for the practical courses will be based on experiment conduction with proper results, is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

Semester End Evaluation (SEE): Theory (100 Marks) + Practical (50 Marks) = Total 150 Marks

Credits	:	02	SEE Duration	:	3 hrs		

GUIDELINES

- 1. Each project group will consist of maximum of two students.
- 2. Each student / group has to select a contemporary topic that will use the technical knowledge of their program of study after intensive literature survey.
- 3. Allocation of the guides preferably in accordance with the expertise of the faculty.
- 4. The number of projects that a faculty can guide would be limited to four.
- 5. The minor project would be performed in-house.
- 6. The implementation of the project must be preferably carried out using the resources available in the department/college.

	Course Outcomes: After completing the course, the students will be able to				
CO1	Conceptualize, design and implement solutions for specific problems.				
CO2	Communicate the solutions through presentations and technical reports.				
CO3	Apply resource managements skills for projects.				
CO4	Synthesize self-learning, team work and ethics.				

Scheme of Continuous Internal Examination

Evaluation will be carried out in 3 phases. The evaluation committee will comprise of 4 members: Guide, Two Senior Faculty Members and Head of the Department.

Activity	Weightage		
Synopsys submission, Preliminary seminar for the approval of selected topic and			
objectives formulation			
Mid term seminar to review the progress of the work and documentation	40%		
Oral presentation, demonstration and submission of project report	40%		
-	Synopsys submission, Preliminary seminar for the approval of selected topic and objectives formulation Mid term seminar to review the progress of the work and documentation		

** Phase wise rubrics to be prepared by the respective departments

CIE Evaluation shall be done with weightage / distribution as follows:

٠	Selection of the topic & formulation of objectives	10%
٠	Design and simulation/ algorithm development/ experimental setup	25%
٠	Conducting experiments/ implementation / testing	25%
٠	Demonstration & Presentation	15%
٠	Report writing	25%

Scheme of Semester End Examination (SEE):

The evaluation will be done by ONE senior faculty from the department and ONE external faculty member from Academia / Industry / Research Organization. The following weightages would be given for the examination. Evaluation will be done in batches, not exceeding 6 students.

• 1	Brief write up about the project	05%
• F	Presentation / Demonstration of the Project	20%
• 1	Methodology and Experimental results & Discussion	25%
• F	Report	20%
• \	Viva Voce	30%

coalescesers. Skimmer tanks, skimmer sizing equations and produced water treating system. Istabilization unit. Environmental problems during separation (ETP) and solutions. Storage of cruc Types of tanks, Evaporation loss, safety systems. Safety during processing of oil and gas at onshoffshore. Unit – IV 9Hou Gas liquid separations, dehydration processes, absorption and adsorption by gas permeation. Desulfuriz processes, solid bed sweetening process, physical and chemical absorption processes, Acid gas removal Integrating natural gas processing Introduction, types of compressors. Selection, Thermodynamics of compressors Unit-V 10Hou Corrosion mechanism and influencing factors, corrosion preventive methods, chemical inhibitors, Cathprotection, protective coating s and plastics, removal of corrosion gases and selection of appropriate materials for preventing corrosion. Course Outcomes: At the end of the course, the student will be able to: CO1. Understand working principle for design of separators CO2. Apply various techniques for the separation of oil-water emulsion. CO3. Analyze performance of oil pipeline corrosion preventive methods, chemical inhibiting Co. Pvt. 1 Fifth Edition, 2008, ISBN: 9788120417151, 8120417151. Carroy and Economics', Marcel Dekke Inc., Fifth Edition, 2007, ISBN 9780849370380. Reference Books: 1					10Hours

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt

innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) solving innovative problems 2) seminar/new developments in the related course 3) Laboratory/field work 4) mini project. The marks component for each assignment is 15 marks. **Total CIE is 20+50+30=100 Marks**.

Scheme of Semester End Examination (SEE) for 100 marks:

(Elective C: Core	NGINEERING e Elective)			
Course Code :18MCH2C3	CIE Marks	:	100	
Credits : L: T: P: 4:0:0	SEE Duration	:	: 3 Hours	
Hrs:48	SEE Marks	:	100	
Unit – I			08Hours	
Microbiology : Scope, Classification of microorganisms, V structure, Classification and reproduction in bacteria. Euk reproduction in Fungi, Yeasts, molds. Biochemistry: Cell o Carbohydrates: Mono and polysaccharides, Nucleic acids, nutrients	aryotic cells: structure, Classi construction, Amino acids and	ficat 1 pro	ion and teins,	
Unit – II			9Hours	
Enzyme Catalyzed Reactions: Introduction, Enzyme kiparameters. Enzyme Inhibitors: Types of inhibitors, Effects of temp of immobilization.				
Unit – III			10Hours	
degrees of reduction; yield coefficients of biomass and pro Growth media: Medium formulation, Oxygen consumption				
	_

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks

each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) solving innovative problems 2) seminar/new developments in the related course 3) Laboratory/field work 4) mini project. The marks component for each assignment is 15 marks. **Total CIE is 20+50+30=100 Marks**.

Scheme of Semester End Examination (SEE) for 100 marks:

	POLYMER COMPOSITES ve D: Core Elective)

Scheme of Semester End Examination (SEE) for 100 marks:

	CHEMICAL PROCESS INTEGRATION		
	(Elective D: Core Elective)		
Cou	rse Code: 18MCH2D2		CIE Marks: 100
Crec	Credits: L:T:P: 4:0:0 SEE Marks: 100		SEE Marks: 100
Hou	Hours: 48 SEE Duration: 3Hrs		SEE Duration: 3Hrs
Cou	Course Learning Objectives:		
1	1 Identify the possibilities of mass and energy integration		
2	2 Target a specific task by quantification		
3	3 Synthesize alternative routes for integration		
4	Analyze the alternatives and generate optimal solution		

Unit-I	
Introduction to Process Integration: Process synthesis, process analysis, targeting	10 Hrs
minimum waste and strategies for targets.	
Unit – II	
Graphical Techniques: Sources, sinks, source – sink mapping, pinch diagram for direct-	10 Hrs
recycle and multi component mapping diagram	
Unit -III	
Synthesis of Mass Exchange Networks: Design of individual mass exchangers, mass	10 Hrs
exchange networks and mass exchange pinch diagram.	
Unit –IV	
Algebraic Approach: Algebraic approach to targeting direct recycles and targeting mass	10 Hrs
exchange.	
Heat Integration: Thermal pinch diagram and minimum utility targeting by algebraic	
approach.	
Unit –V	
Combined Heat and Power Integration: Heat engines, heat pumps, placement of heat	08 Hrs
engines and heat pumps in heat exchange networks.	

Course	Course Outcomes: After completing the course, the students will be able to				
CO1:	Understand the fundamentals, strategies and approaches of process integration.				
CO2:	Apply process integration strategies on chemical engineering systems for mass and utility targeting.				
CO3:	Analyze chemical engineering processes to identify limits on process integration.				
CO4:	Evaluate purchase/waste/energy minimization in chemical engineering processes.

BUSINESS ANALYTICS (Group G: Global Elective)						
Course Code	:	18CS2G01	CI	E Marks	:	100
Credits L: T: P	:	3:0:0	SE	EE Marks	:	100
Hours	:	36L	SE	EE Duration	:	3 hrs

Course Learning Objectives:

Graduates shall be able to

- 1. Formulate and solve business problems to support managerial decision making.
- 2. Explore the concepts, processes needed to develop, report, and analyze business data.
- 3. Use data mining techniques concepts to identify specific patterns in the data
- 4. Interpret data appropriately and solve problems from various sectors such as manufacturing, service, retail, software, banking and finance.

Unit – I	
Business analytics: Overview of Business analytics, Scope of Business analytics, Business Analytics Process, Relationship of Business Analytics Process and organization, competitive advantages of Business Analytics. Statistical Tools: Statistical Notation, Descriptive Statistical methods, Review of probability distribution and data modelling.	07 Hrs
Unit – II	
Trendiness and Regression Analysis: Modelling Relationships and Trends in Data, simple Linear Regression. Important Resources, Business Analytics Personnel, Data and models for Business analytics, problem solving, Visualizing and Exploring Data, Business Analytics Technology.	07 Hrs
Unit – III	
Organization Structures of Business analytics, Team management, Management Issues, Designing Information Policy, Outsourcing, Ensuring Data Quality, Measuring contribution of Business analytics, Managing Changes. Descriptive Analytics, Predictive Analytics, Predictive analytics analysis.	07 Hrs
Unit – IV	
Forecasting Techniques: Qualitative and Judgmental Forecasting, Statistical Forecasting Models, Forecasting Models for Stationary Time Series, Forecasting Models for Time Series with a Linear Trend, Forecasting Time Series with Seasonality, Regression Forecasting with Casual Variables, Selecting Appropriate Forecasting Models.	08 Hrs
Unit –V	
Decision Analysis: Formulating Decision Problems, Decision Strategies with and without Outcome, Probabilities, Decision Trees, The Value of Information, Utility and Decision Making.	07 Hrs

Course	Course Outcomes: After going through this course the student will be able to:		
CO1	Explore the concepts, data and models for Business Analytics.		
CO2	Analyze various techniques for modelling and prediction.		
CO3	Design the clear and actionable insights by translating data.		
CO4	Formulate decision problems to solve business applications

Continuous Internal Evaluation (CIE): Total marks: 100 Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks.A minimum of two assignments are given with a combination of two components among 1) solving innovative problems 2) seminar/new developments in the related course 3) Laboratory/field work 4) mini project. **Total CIE is 20+50+30=100 Marks.**

Semester End Evaluation (SEE): Total marks: 100

Scheme of Semester End Examination (SEE) for 100 marks:

Semester: II						
MODELING USING LINEAR PROGRAMMING						
	(Group G: Global Elective)					
Course Code	:	18IM2G03	CIE Marks	:	100	
Credits L: T: P	:	3:0:0	SEE Marks	:	100	
Hours	:	36L	SEE Duration	:	3 hrs	

Unit – I	
Linear Programming: Introduction to Linear Programming problem	07 Hrs
Simplex methods: Variants of Simplex Algorithm – Use of Artificial Variables	
Unit – II	
Advanced Linear Programming :Two Phase simplex techniques, Revised simplex method	07 Hrs
Duality: Primal-Dual relationships, Economic interpretation of duality	
Unit – III	
Sensitivity Analysis: Graphical sensitivity analysis, Algebraic sensitivity analysis - changes in RHS, Changes in objectives, Post optimal analysis - changes affecting feasibility and optimality	07 Hrs
Unit – IV	
Transportation Problem: Formulation of Transportation Model, Basic Feasible Solution using North-West corner, Least Cost, Vogel's Approximation Method, Optimality Methods, Unbalanced Transportation Problem, Degeneracy in Transportation Problems, Variants in Transportation Problems.	08 Hrs
Unit –V	
Assignment Problem: Formulation of the Assignment problem, solution method of assignment problem-Hungarian Method, Variants in assignment problem, Travelling Salesman Problem (TSP).	07 Hrs

Course Outcomes: After going through this course the student will be able to:				
CO1	Explain the various Linear Programming models and their areas of application.			
CO2	Formulate and solve problems using Linear Programming methods.			
CO3	Develop models for real life problems using Linear Programming techniques.			
CO4	Analyze solutions obtained through Linear Programming techniques.

	PROJECT MANAGEMENT					
	(Group G: Global Elective)					
Course Code	:	18IM2G04	CIE Marks	:	100	
Credits L: T: P	:	3:0:0	SEE Marks	:	100	
Hours	:	36L	SEE Duration	:	3 hrs	

Introduction: Project Planning, Need of Project Planning, Project Life Cycle, Roles,	07 Hrs
Responsibility and Team Work, Project Planning Process, Work Breakdown Structure	
(WBS), Introduction to Agile Methodology.	
Unit – II	
Capital Budgeting: Capital Investments: Importance and Difficulties, phases of capital	07 Hrs
budgeting, levels of decision making, facets of project analysis, feasibility study – a	
schematic diagram, objectives of capital budgeting	
Unit – III	
Project Costing: Cost of Project, Means of Finance, Cost of Production, Working Capital	08 Hrs
Requirement and its Financing, Profitability Projections, Projected Cash Flow Statement,	
Projected Balance Sheet, Multi-year Projections, Financial Modeling, Social Cost Benefit	
Analysis	
Unit – IV	
Tools & Techniques of Project Management: Bar (GANTT) chart, bar chart for	07Hrs
combined activities, logic diagrams and networks, Project evaluation and review	
Techniques (PERT) Critical Path Method (CPM), Computerized project management	
Unit-V	1
Project Management and Certification: An introduction to SEI, CMMI and project	07 Hrs
management institute USA – importance of the same for the industry and practitioners.	
PMBOK 6 - Introduction to Agile Methodology, Themes / Epics / Stories, Implementing	
Agile.	
Domain Specific Case Studies on Project Management: Case studies covering project	
planning, scheduling, use of tools & techniques, performance measurement.	

Course Outcomes: After going through this course the student will be able to:				
CO1	Explain project planning activities that accurately forecast project costs, timelines, and quality.			
CO2	Evaluate the budget and cost analysis of project feasibility.			
CO3	Analyze the concepts, tools and techniques for managing projects.			
CO4	Illustrate project management practices to meet the needs of Domain specific stakeholders from multiple sectors of the economy (i.e. consulting, government, arts, media, and charity organizations).

II Semester						
ENERGY MANAGEMENT						
	(Group G: Global Elective)					
Course Code: 18CH2G05	CIE Marks	: 100				
Credits: L:T:P: 3:0:0	SEE Marks	: 100				
Hours: 36L	SEE Hrs: 3					

Course Learning Objectives(CLO):

Students are able to:

- 5. Explain the importance of energy conservation and energy audit.
- 6. Understand basic principles of renewable sources of energy and technologies.
- 7. Outline utilization of renewable energy sources for both domestics and industrial application.
- 8. Analyse the environmental aspects of renewable energy resources.

Unit-I	08 Hrs
Energy conservation:	
Principles of energy conservation, Energy audit and types of energy aud	
approaches, Cogeneration and types of cogeneration, Heat Exchangers and cl	assification.
Unit-II	07 Hrs
Wet Biomass Gasifiers:	
Introduction, Classification of feedstock for biogas generation, Biomass conv	version technologies: Wet
and dry processes, Photosynthesis, Biogas generation, Factors affecting bio	0
of biogas plants, Floating drum plant and fixed dome plant their advantages a	
Unit -III	07 Hrs
Dry Biomass Gasifiers :	
Biomass energy conversion routes, Thermal gasification of biomass, Classifi	cation of gasifiers, Fixed
bed systems: Construction and operation of up draught and down draught gas	
Unit -IV	07 Hrs
Solar Photovoltaic:	
Principle of photovoltaic conversion of solar energy, Types of solar cells and	fabrication.
Wind Energy:	
Classification, Factors influencing wind, WECS & classification.	
Unit -V	07 Hrs
Alternative liquid fuels:	
Introduction, Ethanol production: Raw materials, Pre-treatment, Conversion	
flow sheet. Gasification of wood: Detailed process, Gas purification and	shift conversion, Biofuel
from water hyacinth.	
<u> </u>	
Course outcomes (CO):	
On completion of the course, the student should have acquired the ability to	
CO1: Understand the use alternate fuels for energy conversion	
CO2: Develop a scheme for energy audit	
CO3: Evaluate the factors affecting biomass energy conversion	
CO4: Design a biogas plant for wet and dry feed

Credits L: T: P	:	3:0:0	SEE Marks	:	100
Hours	:	36L	SEE Duration	:	3 hrs

Unit – I	
Introduction: Industrial, Internet, Case studies, Cloud and Fog, M2M Learning and	07 Hrs
Artificial Intelligence, AR, Industrial Internet Architecture Framework (IIAF), Data	
Management.	
Unit – II	
The Concept of the IIoT: Modern Communication Protocols, Wireless Communication	07 Hrs
Technologies, Proximity Network Communication Protocols, TCP/IP, API: A Technical	
Perspective, Middleware Architecture.	
Unit – III	
Data Analytics in Manufacturing: Introduction, Power Consumption in manufacturing,	08 Hrs
Anomaly Detection in Air Conditioning, Smart Remote Machinery Maintenance Systems	
with Komatsu, Quality Prediction in Steel Manufacturing.	
Internet of Things and New Value Proposition, Introduction, Internet of Things Examples,	
IoTs Value Creation Barriers: Standards, Security and Privacy Concerns.	
Advances in Robotics in the Era of Industry 4.0, Introduction, Recent Technological	
Components of Robots, Advanced Sensor Technologies, Artificial Intelligence, Internet of	
Robotic Things, Cloud Robotics.	
Unit – IV	o -
Additive Manufacturing Technologies and Applications: Introduction, Additive	07 Hrs
Manufacturing (AM) Technologies, Stereo lithography, 3DP, Fused Deposition Modeling,	
Selective Laser Sintering, Laminated Object Manufacturing, Laser Engineered Net	
Shaping, Advantages of Additive Manufacturing, Disadvantages of Additive	
Manufacturing.	
Advances in Virtual Factory Research and Applications, The State of Art, The Virtual	
Factory Software , Limitations of the Commercial Software	
Unit –V	07 Hrs
Augmented Reality: The Role of Augmented Reality in the Age of Industry 4.0,	U/ Hrs
Introduction, AR Hardware and Software Technology, Industrial Applications of AR,	
Maintenance, Assembly, Collaborative Operations, Training.	
Smart Factories: Introduction, Smart factories in action, Importance, Real world smart factories, The way forward.	
A Roadmap: Digital Transformation, Transforming Operational Processes, Business	
Models, Increase Operational Efficiency, Develop New Business Models.	
	<u> </u>

Cours	Course Outcomes: After going through this course the student will be able to:			
CO1	Understand the opportunities, challenges brought about by Industry 4.0 for benefits of organizations and individuals			
CO2				
CO3	Apply the Industrial 4.0 concepts in a manufacturing plant to improve productivity and profits			
CO4	Evaluate the effectiveness of Cloud Computing in a networked economy

Course	e Outcomes: After completing the course, the students will be able to			
CO1:	Understand the purpose and the ways to develop new materials upon proper combination of			
	known materials.			
CO2:	Identify the basic constituents of a composite materials and list the choice of materials			
	available			
CO3:	Will be capable of comparing/evaluating the relative merits of using alternatives for important			
	engineering and other applications.			
CO4:	Get insight to the possibility of replacing the existing macro materials with nano-materials.

ADVANCED STATISTICAL METHODS				
(Global Elective)				
Course Code: 18MAT2G10		CIE Marks: 100		
Credits: L:T:P:: 3:0:0		SEE Marks: 100		
Hours: 36		SEE Duration: 3Hrs		

Course Learning Objectives (CLO):

Students are able to:

1. Adequate exposure to learn sampling techniques, random phenomena for analyzing data for solving real world problems.

2. To learn fundamentals of estimation and problems used in various fields of engineering and science.

3. Explore the fundamental principles of statistical inference and tests of hypothesis.

4. Apply the concepts of regression and statistical models to solve the problems of engineering applications.

	Unit-I	07 Hrs	
San	npling Techniques:	•	
Rar	ndom numbers, Concepts of random sampling from finite and infinite populations, Simpl	e random	
sam	pling (with replacement and without replacement). Expectation and standard error of sam	ple mean	
and	proportion.		
	Unit-II	07 Hrs	
Est	imation:		
Poi	nt estimation, Estimator and estimate, Criteria for good estimates - unbiasedness, con	nsistency,	
effi	efficiency and sufficiency, Method of moment's estimation and maximum likelihood estimation,		
Pro	perties of maximum likelihood estimator (no proofs), Confidence intervals-population me	ean (large	
sam	nple), population proportion.		
	Unit -III	07Hrs	
Tes	ts of Hypothesis:		
Prir	nciples of Statistical Inference, Formulation of the problems with examples, Simple and c	composite	
hyp	othesis, Null and alternative hypothesis, Tests - type I and type II error, Testing of 1	mean and	
vari	variance of normal population (one sample and two samples), Chi squared test for goodness of fit.		
	Unit -IV	07 Hrs	
Lin	ear Statistical Models:		
Def	inition of linear model and types, One way ANOVA and two way ANOVA me	odels-one	
obs	observation per cell, multiple but equal number of observation per cell.		
	Unit -V	08 Hrs	
Lin	ear Regression:		
Simple linear regression, Estimation of parameters, Properties of least square estimators, Estimation			
of error variance, Multivariate data, Multiple linear regressions, Multiple and partial correlation,			
Autocorrelation-introduction and plausibility of serial dependence, sources of autocorrelation,			
Dur	bin-Watson test for auto correlated variables.		
	Reference Books:

	Runger, 10 th Edition, 2000, A Modern Approach, S Chand Publications, ISBN 81-7014-791-3.
4	Regression Analysis: Concepts and Applications , F. A. Graybill and H. K. Iyer, Belmont, Calif,
	1994, Duxbury Press, ISBN-13: 978-0534198695.

Course outcomes (CO's):

On completion of the course, the student should have acquired the ability to

CO1: Identify and interpret the fundamental concepts of sampling techniques, estimates and types, hypothesis, linear statistical models and linear regression arising in various fields engineering.

CO2: Apply the knowledge and skills of simple random sampling, estimation, null and alternative hypotheses, errors, one way ANOVA, linear and multiple linear regressions.

CO3: Analyze the physical problem to establish statistical/mathematical model and use appropriate statistical methods to solve and optimize the solution.

CO4: Distinguish the overall mathematical knowledge gained to demonstrate the problems of sampling techniques, estimation, tests of hypothesis, regression and statistical model arising in many practical situations.

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks):

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) Solving innovative problems 2) Seminar/new developments in the related course 3) Laboratory/ field work 4) mini project. **Total CIE is 20+50+30 = 100 marks**.

Scheme of Semester End Examination (SEE) for 100 marks:
