(Autonomous Institution Affiliated to VTU, Belagavi) R.V. Vidyaniketan Post, Mysore Road Bengaluru – 560 059

Bachelor of Engineering (B.E.) Scheme and Syllabus of III & IV Semesters

2018 SCHEME

INFORMATION SCIENCE & ENGINEERING

VISION

Leadership in Quality Technical Education, Interdisciplinary Research & Innovation, with a Focus on Sustainable and Inclusive Technology

MISSION

- 1. To deliver outcome based Quality education, emphasizing on experiential learning with the state of the art infrastructure.
- 2. To create a conducive environment for interdisciplinary research and innovation.
- 3. To develop professionals through holistic education focusing on individual growth, discipline, integrity, ethics and social sensitivity.
- 4. To nurture industry-institution collaboration leading to competency enhancement and entrepreneurship.
- 5. To focus on technologies that are sustainable and inclusive, benefiting all sections of the society.

QUALITY POLICY

Achieving Excellence in Technical Education, Research and Consulting through an Outcome Based Curriculum focusing on Continuous Improvement and Innovation by Benchmarking against the global Best Practices.

CORE VALUES

Professionalism, Commitment, Integrity, Team Work, Innovation

RV COLLEGE OF ENGINEERING[®]

(Autonomous Institution Affiliated to VTU, Belagavi) R.V. Vidyaniketan Post, Mysore Road Bengaluru – 560 059

Bachelor of Engineering (B.E.) Scheme and Syllabus of III & IV Semesters

2018 SCHEME

DEPARTMENT OF INFORMATION SCIENCE & ENGINEERING

DEPARTMENT VISION

To be the hub for innovation in Information Science & Engineering through Teaching, Research, Development and Consultancy; thus make the department a well-known resource centre in advanced, sustainable and inclusive technology.

DEPARTMENT MISSION

- **ISE1**: To enable students to become responsible professionals, strong in fundamentals of Information Science and engineering through experiential learning.
- **ISE2**: To bring research and entrepreneurship into class rooms by continuous design of innovative solutions through research publications and dynamic development oriented curriculum.
- **ISE3**: To facilitate continuous interaction with the outside world through student internship, faculty consultancy, workshops, faculty development programmes, industry collaboration and association with the professional societies.
- **ISE4**: To create a new generation of entrepreneurial problem solvers for a sustainable future through green technology with an emphasis on ethical practices, inclusive societal concerns and environment.
- **ISE5**: To promote team work through inter-disciplinary projects, co-curricular and social activities.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

- **PEO1:** To provide adaptive and agile skills in Information Science and Engineering needed for professional excellence / higher studies /Employment, in rapidly changing scenarios.
- **PEO2:** To provide students a strong foundation in basic sciences and its applications to technology.
- **PEO3:** To train students in core areas of Information science and Engineering, enabling them to analyse, design and create products and solutions for the real world problems, in the context of changing technical, financial, managerial and legal issues.
- **PEO4:** To inculcate leadership, professional ethics, effective communication, team spirit, multidisciplinary approach in students and an ability to relate Information Engineering issues to social and environmental context.
- **PEO5:** To motivate students to develop passion for lifelong learning, innovation, career growth and professional achievement.

PROGRAM SPECIFIC OUTCOMES (PSOs)

PSO	Description				
PSO1	Recognize and appreciate the principles of theoretical foundations, data organization, data communication, security and data analytical methods in the evolving technology				
PSO2	Learn the applicability of various system software for the development of quality products in solving real-world problems with a focus on performance optimization				
PSO3	Demonstrate the ability of team work, professional ethics, communication and documentation skills in designing and implementation of software products using the SDLC principles				

Lead Society:

Program Criteria

All programs seeking accreditation from the Computing Accreditation Commission of ABET must demonstrate that they satisfy all of the specific Program Criteria implied by the program title.

PROGRAM CRITERIA FOR COMPUTER SCIENCE AND SIMILARLY NAMED COMPUTING PROGRAMS

Lead Society: CSAB

	1. Coverage of fundamentals of algorithms, data structures, software design, concepts of programming languages and computer organization and architecture.[CS]			
Computer	2. An exposure to a variety of programming languages and systems.[CS]			
Science	3. Proficiency in at least one higher-level language. [CS]			
	4. Advanced course work that builds on the fundamental course work to provide depth. [CS]			
1. The core information technologies of human computer interaction, informanagement, programming, networking, web systems and technologies.				
Information	2. information assurance and security.[IT]			
Technology	3. System administration and maintenance[IT].			
	4. system integration and architecture. [IT]

There are two text books prescribed by VTU for the Kannada Course:

1. Samskruthika Kannada (AADALITHA KANNADA);

2. Balake Kannada (VYAVAHARIKA KANNADA);

The first text book is prescribed for the students who know Kannada to speak, read and write (KARNATAKA STUDENTS). The second text book is for students who do not understand the Kannada language (NON-KARNATAKA STUDENTS)

Course	e Outcomes: After completing the course, the students will be able to
CO1:	Understand the fundamental concepts of linear algebra, Laplace and inverse Laplace
	transforms, number theory and enumeration.
CO2:	Solve the problems of vector spaces, linear transformations, Laplace transform, gcd and
	generating functions.
CO3:	Apply the acquired knowledge to solve the problems of factorization, transform of special

	functions and exponential generating functions.
CO4:	Evaluate solution of differential equations using Laplace transform, decomposition of a
	matrix, public key encryption.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and experiential learning (EL). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for experiential learning is 20. **Total CIE is 30(Q) + 50(T) + 20(EL) = 100 Marks.**

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Course	e Outcomes: After completing the course, the students will be able to
CO1:	Identify the components of environment and exemplify the detrimental impact of
	anthropogenic activities on the environment.
CO2:	Differentiate the various types of wastes and suggest appropriate safe technological methods
	to manage the waste.
CO3:	Aware of different renewable energy resources and can analyse the nature of waste and
	propose methods to extract clean energy.
CO4:	Adopt the appropriate recovering methods to recover the essential resources from the wastes

for reuse or recycling.

Laboratory Component PART-A

1	Use Stack operations to do the following:
	i) Assign to a variable name Y the value of the third element from the top of the stack
	and keep the stack undisturbed.
	ii) Given an arbitrary integer n pop out the top n elements. A message should be
	displayed if an unusual condition is encountered.
	iii) Assign to a variable name Y the value of the third element from the bottom of the
	stack and keep the stack undisturbed.
	(Hint: you may use a temporary stack)
2	Write a C program that parses Infix arithmetic expressions to Postfix arithmetic expressions
	using a Stack.
3	Write a C program to simulate the working of Messaging System in which a message is placed
	in a circular Queue by a Message Sender, a message is removed from the circular queue by a
	Message Receiver, which can also display the contents of the Queue.
4	Implement a program to multiply two polynomials using single linked list.
5	Write a C program to implement addition of long positive integers using circular single linked
	list with header node.
6	Design a doubly linked list to represent sparse matrix. Each node in the list can have the row
	and column index of the matrix element and the value of the element. Print the complete
	matrix as the output.
7	Write a C program to create Binary Tree and provide insertion and deletion operations and to
0	traverse the tree using in-order, Preorder and Post order (recursively)
8	Given a String representing a parentheses-free infix arithmetic expression, implement a
	program to place it in a tree in the infix form. Assume that a variable name is a single letter.
0	Write a C program to implement Hashing using Linear prohing. Implement insertion deletion
9	write a C program to implement Hasning using Linear probing. Implement insertion, deletion,
10	Write a C program to implement priority queue to insert delete and display the elements
10	PART B
Student	$\mathbf{I} \mathbf{A} \mathbf{K} \mathbf{I} - \mathbf{D}$
avampla	applications are listed below:
	uppleations are instead below.
•	
•	Dictionary implementation for Indian Languages
•	Stemmer implementation for Indian language

- Word frequency finder.
- Bitmap Image Compression.
- Binary Tree (Graphical Implementation)
- To store a set of programs which are to be given access to a hard disk according to their priority
- For representing a city region telephone network.
- To store a set of fixed key words which are referenced very frequently.
- To represent an image in the form of a bitmap.
- To implement back functionality in the internet browser.
- To store dynamically growing data which is accessed very frequently, based upon a key value.
- To implement printer spooler so that jobs can be printed in the order of their arrival.
- To record the sequence of all the pages browsed in one session.
- To implement the undo function.
- To store information about the directories and files in a system.

Course	Course Outcomes: After completing the course, the students will be able to						
CO1:	Understand and explore the fundamental concepts of various data structures.						
CO2:	Analyze and represent various data structures and its operations.						
CO3:	Design algorithms using different data structures like Stack, Queue, List, Tree and hashing.						
CO4:	Implement programs with suitable data structure based on the requirements of the						
	real-time application.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and experiential learning (EL). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for experiential learning is 20.

Total CIE is 30(Q) +50(T) +20(EL) =100 Marks.

Scheme of Continuous Internal Evaluation (CIE); Practical Test for 50 Marks

The Laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average marks (AM) over number of weeks is considered for 30 marks. At the end of the semester a test (T) is conducted for 10 marks. The students are encouraged to implement additional innovative experiments (IE) in the lab and are rewarded for 10 marks. Total marks for the laboratory is 50.

Total CIE is 30(AM) +10 (T) +10 (IE) =50 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part A and Part B. Part A consists of objective type questions for 20 marks covering the complete syllabus. Part B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Scheme of Semester End Examination (SEE); Practical Exam for 50 Marks

SEE for the practical courses will be based on experiment conduction with proper results, is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

Semester End Evaluation (SEE): Theory (100 Marks) + Practical (50 Marks) = Total 150 Marks

Total Hours		:	39L		SEE Duration	:	3.00+3:00 Hours
Cou	rse Learning	Obj	ectives:				
1	Study the ba	sic c	concepts of operating s	systems and unde	erstand the structur	re a	nd functions of OS.
2	2 Learn about Processes, Threads, Scheduling algorithms and the principles of concurrency and						
Deadlocks.							
3	3 Learn various memory management schemes and study I/O management and File systems.						
4	4 Learn the basics of Linux system and perform administrative tasks on Linux Servers.						

Unit-I	08 Hrs					
Operating Systems Overview: What Operating Systems do ,Computer-System Organ	ization,					
Computer- System Architecture ,Operating System Structure, Operating System Operations, Process						
Management, Memory Management ,Storage Management , Protection and Security, Co	omputing					
Environments.						
System Structures – Operating System Services, User Operating System Interface, System C	Calls ,					
Types of System Calls ,System Programs, Operating System Design and Implementation, O	perating-					
System Structure, Operating System Debugging, Operating System Generation, System Boo	t					
Unit – II	08 Hrs					
Process Concept, Process Scheduling, Operations on Processes, Interprocess Communication	,					
Examples of IPC Systems, Communication in Client Server Systems						
Multithreaded programming: Overview, Multithreading Models.						
Process Scheduling: Basic Concepts, Scheduling Criteria - Scheduling Algorithms - Thre	ad					
Scheduling						
Synchronization: Background, The Critical-Section Problem, Mutex locks, Semaphores C	lassic					
Problems of Synchronization						
Unit –III 08 Hr						
Deadlocks: System Model ,Deadlock Characterization, Methods for Handling Deadlocks, Deadlock						
Prevention, Deadlock Avoidance, Deadlock detection, Recovery from deadlock						
Memory-Management Strategies : Background, Swapping, Contiguous Memory Allocation,						
Segmentation, Paging, Structure of the Page Table						
Virtual-Memory Management : Background , Demand Paging ,Copy-on-Write	, Page					
Replacement, Allocation of Frames, Thrashing, Operating System Examples						
Unit –IV	08 Hrs					
File System : File Concept ,Access Methods , Directory and Disk Structure, File-System Mo	unting,					
File Sharing						
Implementing File Systems : File, System Structure, File-System Implementation,	Directory					
Implementation, Allocation Methods, Free space Management, Mass Storage Structure: Or	verview,					
Disk Structure , Disk Attachment, Disk Scheduling						
Unit –V	07 Hrs					
System Protection: Goals of Protection, Principles of Protection, Domain of Protection, Acc	cess					
Matrix, Implementation of Access Matrix, Access Control.						
CASE STUDY: THE LINUX SYSTEM History, Design principles, Kernel Modules, Input a	ind					
Output, Security.						

Course	Course Outcomes: After completing the course, the students will be able to						
CO1:	Analyse the basic working, functions, and design issues related to different operating						
	systems						
CO2:	Conceptualize and evaluate the different techniques and algorithms used in management of						
	processes, memory and files.						
CO3:	Demonstrate and analyse the internal working and implementation of the different modules						
	and its interaction in the OS.						
CO4:	Perform administrative and security tasks on operating systems.

Laboratory Component

The Lab component consists of two parts as: PART A for Logic Design experiments and PART B for Computer Organization and Architecture (COA) experiments. The experiments are designed and realized using VLAB software application.

List of experiments for Logic Design: PART A

- 1. Analysis and Synthesis of Boolean Expressions using Basic Logic Gates
- 2. Realization of Adder and Subtractor circuits using Logic gates
- 3. Realization of Comparator circuit using IC 7485, Encoder and decoder circuits using logic gates
- 4. Synthesis of Flip flop circuits: Pulse and Edge triggered flip flops
- 5. Realization of Register circuits
- 6. To design a LED display using decoder chip and study of priority encoder.

List of experiments for COA : PART B

- 1. Synthesis of Combinational Multipliers
- 2. Design Booth's Multiplier
- 3. Design and realization of ALU (Arithmetic Logic Unit)
- 4. Memory Design :Associative cache Design
- 5. Memory Design : Direct Mapped cache
- 6. Design of CPU

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and experiential learning (EL). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for experiential learning is 20.

Total CIE is 30(Q) +50(T) +20(EL) =100 Marks.

Scheme of Continuous Internal Evaluation (CIE); Practical Test for 50 Marks

The Laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average marks (AM) over number of weeks is considered for 30 marks. At the end of the semester a test (T) is conducted for 10 marks. The students are encouraged to implement additional innovative experiments (IE) in the lab and are rewarded for 10 marks. Total marks for the laboratory is 50.

Total CIE is 30(AM) +10 (T) +10 (IE) =50 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part A and Part B. Part A consists of objective type questions for 20 marks covering the complete syllabus. Part B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Scheme of Semester End Examination (SEE); Practical Exam for 50 Marks

SEE for the practical courses will be based on experiment conduction with proper results, is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

Semester End Evaluation (SEE): Theory (100 Marks) + Practical (50 Marks) = Total 150 Marks

Course	Course Outcomes: After completing the course, the students will be able to				
CO1:	Understand and explore the fundamental concepts of discrete mathematical structure.				
CO2:	Apply the concepts of discrete mathematical structures for effective computation and				
	Relating problems in computer science domain.				
CO3:	Analyse the concepts of discrete mathematics to various fields of computer science.				
CO4:	Design solutions for complex problem using different concepts of discrete mathematical				
	Structure as a logical predictable system.

	V
	Unit – III

Programming Constructs Decision Making and Branching

Decision making with 'if' statement, Simple 'if' statement, the 'if...else' statement, nesting of 'if...else' statements, The 'else if' ladder, The 'switch' statement, The '?:' operator, The 'goto' statement.

Decision making and looping The while statement, The do while statement, The 'for' statement, Jumps in loops.

Unit – IV	06 Hrs

Arrays

One dimensional arrays, Declaration of one dimensional arrays. Initialization of one dimensional arrays, Two dimensional arrays, Initializing two dimensional arrays.

Character Arrays and Strings

Declaring and Initializing String Variables, Reading Strings from Terminal, Writing strings to screen, String handling functions.

06 Hrs

Unit – V	08 Hrs
User-defined functions	

Need for User Defined Functions, Definition of functions, Return values and their types, Function calls, Function declaration. Examples.

Introduction to Pointers: Introduction, Declaration and initialization of pointers. Examples **Structures and Unions:** Introduction, Structure and union definition, Declaring structure and union variables, Accessing structure members. Example programs.

	PRACTICE PROGRAMS					
1.	Familiarization with programming environment, concept of naming the program files, storing, compilation, execution and debugging. Taking any simple C- code.(Example programs having the delimeters, format specifiers in printf and scanf)					
2.	Debug the errors and understand the working of input statements in a program by compiling the C-code.					
3.	Implement C Program to demonstrate the working of operators and analyze the output.					
4.	 Simple computational problems using arithmetic expressions and use of each operator (+,-,/,%) leading to implementation of a Commercial calculator with appropriate message: a)Read the values from the keyboard b) Perform all the arithmetic operations. c) Handle the errors and print appropriate message. 					
5.	Write a C program to find and output all the roots if a given quadratic equation, for non-zero coefficients. (Using if <i>else</i> statement).					
6a.	Write a C program to print out a multiplication table for a given NxN and also to print the sum table using skip count 'n' values for a given upper bound.					
6b.	Write a C program to generate the patterns using for loops. Example: (to print * if it is even number) 1 ** 333 **** 55555					
7a.	Write a C program to find the Greatest common divisor(GCD)and Least common multiplier(
71	LCM) Write a C program to input a number and sheak whether the number is polindrome or not					
70. 8	Develop a C program for one dimensional demonstrate a C program that reads N integer					
0.	numbers and arrange them in ascending or descending order using bubble sort technique.					
9.	 Develop and demonstrate a C program for Matrix multiplication: a) Read the sizes of two matrices and check the compatibility for multiplication. b) Print the appropriate message if the condition is not satisfied and ask user to re-enter the size of matrix. c) Read the input matrix d) Perform matrix multiplication and print the result along with the input matrix. 					
10.	Using functions develop a C program to perform the following tasks by parameter passing concept: a) To read a string from the user Print appropriate message for palindrome or not palindrome					

11a.	Write a C program to find the length of the string without using library function.
11b.	Write a program to enter a sentence and print total number of vowels.
12.	Design a structure 'Complex' and write a C program to perform the following operations:
	i. Reading a complex number.
	ii. Addition of two complex numbers.
	iii. Print the result
13.	Create a structure called student with the following members student name, rollno, and a
	structure with marks details in three tests. Write a C program to create N records and
	a) Search on roll no and display all the records.
	b) Average marks in each test.
	c) Highest marks in each test
13.	 a) Search on roll no and display all the records. b) Average marks in each test. c) Highest marks in each test

Course Outcomes: After Completing the course, the students will be able to

CO1	Understand and explore the fundamental computer concepts and basic programming principles like data types, input/output functions, operators, programming constructs and user defined functions.
CO2	Analyze and Develop algorithmic solutions to problems.
CO3	Implement and Demonstrate capabilities of writing 'C' programs in optimized, robust and reusable code.
CO4	Apply appropriate concepts of data structures like arrays, structures implement programs for various applications

Continuous Internal Evaluation (CIE); Theory (50 Marks)

CIE is executed by way of quizzes (Q), tests (T) and lab practice (P). A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks the sum of the marks scored from quizzes would be reduced to 10 marks. The two tests are conducted for 30 marks each and the sum of the marks scored from two tests is reduced to 30. The programs practiced would be assessed for 10 marks (Execution and Documentation).

Total CIE is 10(Q) + 30(T) + 10(P) = 50 Marks.

Semester End Evaluation (SEE); Theory (50 Marks)

SEE for 50 marks is executed by means of an examination. The Question paper for the course consists of five main questions, one from each unit for 10 marks adding up to 50 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Continuous Internal Evaluation (CIE); (50 Marks)

CIE is executed by way of quizzes (Q), tests (T) and Activity. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks and the sum of the marks scored from two quizzes is reduced to 10. The two tests are conducted for 50 marks each and the sum of the marks scored from two tests is reduced to 30. The marks component for Activity is 10. Total CIE is 10(Q) + 30(T) + 10(A) = 50 Marks.

Semester End Evaluation (SEE); Theory (50 Marks)

SEE for 50 marks executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 25 marks covering the complete syllabus. Part – B consists of essay type questions, one from each unit for 5 marks adding up to 25 marks.

Course	Outcomes: After completing the course, the students will be able to
CO1:	Understand the fundamental concepts of properties and representation of graphs, different measures of statistical distribution using central moments.
CO2:	Solve the problems involving characterization and operations on graphs, fitting of a curve for the given data and functions of random variables.
CO3:	Apply the acquired knowledge to solve the problems on different types of graphs, correlation, regression and measures of probability distributions.
CO4:	Evaluate the solutions of application problems in graph theory and probability distributions.

#### Continuous Internal Evaluation (CIE); Theory (100 Marks)

**CIE** is executed by way of quizzes (Q), tests (T) and experiential learning (EL). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for experiential learning is 20. **Total CIE is 30(Q) + 50(T) + 20(EL) = 100 Marks.** 

#### Semester End Evaluation (SEE); Theory (100 Marks)

**SEE** for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

#### Laboratory Component PART – A

Note: The following programs can be executed on C/C++/Python any equivalent tool/language

- 1. Write a program to sort a given set of elements using Merge sort method and find the timerequired to sort the elements.
- 2. Write a program to sort a given set of elements using Quick sort method and find the timerequired to sort the elements
- 3. Write a program to print all the nodes reachable from a given starting node in a graphusing Depth First Search method and Breadth First method. Also check connectivity of the graph. If the graph is not connected, display the number of components in the graph.
- 4. Write a program to obtain the Topological ordering of vertices in a given digraph using

- a) Vertices deletion method b)DFS method
- 5. Write a program to sort a given set of elements using Heap sort method. Find the time complexity.
- 6. Write a program to implement Horspool's algorithm for String Matching.
- 7. Write a program to implement 0/1 Knapsack problem using dynamic programming
- 8. Write a program to find Minimum cost spanning tree of a given undirected graph usingPrim's algorithm.
- 9. Write a program to find the shortest path using Dijkstra's algorithm for a weighted connected graph.
- 10. Write a program to find a subset of a given set  $S = \{S_1, S_2, ..., S_n\}$  of npositive integers whose sum is equal to a given positive integer d. For example, if  $S = \{1, 2, 5, 6, 8\}$  and d = 9, there are two solutions  $\{1,2,6\}$  and  $\{1,8\}$ . Display a suitable message, if the given problem instance doesn't have a solution.
- 11. Write a program to implement N -queens problem using backtracking
- 12. Write a program to solve TSP problem using branch and bound.

#### PART – B

Students have to solve a given problem using different design technique. The analysis with the comparison of the implemented algorithm has to be demonstrated. The problem types will be one among the following: (Any other problem can be included)

- 1. Sorting
- 2. String matching
- 3. Travelling salesman problem
- 4. Shortest Path
- 5. Knapsack Problem

Course	Outcomes: After completing the course, the students will be able to
CO1:	Understand and explore the asymptotic runtime complexity of algorithms by using
	mathematical relations.
CO2:	Select and apply appropriate design techniques to solve real world problems.
CO3:	Estimate the computational complexity of different algorithms.
<b>CO</b> 4:	Apply the efficient algorithm design approaches in a problem specific manner.

#### **Continuous Internal Evaluation (CIE); Theory (100 Marks)**

**CIE** is executed by way of quizzes (Q), tests (T) and experiential learning (EL). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for experiential learning is 20.

Total CIE is 30(Q) +50(T) +20(EL) =100 Marks.

#### Scheme of Continuous Internal Evaluation (CIE); Practical Test for 50 Marks

The Laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average marks (AM) over number of weeks is considered for 30 marks. At the end of the semester a test (T) is conducted for 10 marks. The students are encouraged to implement additional innovative experiments (IE) in the lab and are rewarded for 10 marks. Total marks for the laboratory is 50.

#### Total CIE is 30(AM) +10 (T) +10 (IE) =50 Marks.

#### Semester End Evaluation (SEE); Theory (100 Marks)

**SEE** for 100 marksis executed by means of an examination. The Question paper for the course contains two parts, Part A and Part B. Part A consists of objective type questions for 20 marks covering the complete syllabus. Part B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

#### Scheme of Semester End Examination (SEE); Practical Exam for 50 Marks

SEE for the practical courses will be based on experiment conduction with proper results, is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

#### Semester End Evaluation (SEE): Theory (100 Marks) + Practical (50 Marks) = Total 150 Marks

Daemon Processes:	

Introduction, Daemon Characteristics, Coding Rules, Error Logging, Client-Server Model Inter-process Communication: Overview of IPC Methods, Pipes, popen, pclose Functions, Coprocesses, FIFOs, System V IPC,

Message Queues, Semaphores, Shared Memory, Client-Server Properties.

Course	Outcomes: After completing the course, the students will be able to
CO1:	Efficiently use UNIX commands to interact with system.
CO2:	Select and make use of the OS kernel functions and their APIs, standard programming
	languages, and utility tools to meet real time requirements.
CO3:	Handle signals and exceptions within a process and to control processes.
CO4:	Apply the knowledge and techniques learnt to improve the features of UNIX Shell.

#### Laboratory Component

Program No.	Program
1	Write a shell script that accepts valid file names as command line arguments and for each of the arguments, prints the type of the file. (Regular file, Directory file, Character device file, Block device file, Symbolic link file)
2	<ul><li>a) Write a shell script simply counts the number of lines in an input file.</li><li>b) Write a shell script to extract a substring from a given string</li></ul>
3	Write a shell script to recursively traverse a folder to retrieve all files having permissions as accepted from the user.
4	Write a C program to display the name of user defined function after returning from the user defined function to <i>main</i> function using <i>'setjmp'</i> and <i>'longjmp'</i> functions.
5	Write a C program to do the following: using fork () create a child process. The child process prints its own process-id and id of its parent, The child process should read commands from the standard input and execute them (a minimal implementation of a shell – like program).and then exits. The parent process waits for its child to finish (by executing the wait ()) and prints its own process-id and the id of its child process and then exists.
6	Write a C program to generate the signals SIGINT, SIGFPE, SIGSEGV, SIGCHLD & SIGILL and provide signal handlers for the signals generated.
7	Write a C program to create a daemon which prompts for authentication (username and password) whenever user tries to display the contents of a file owned by the user.
8	<ul><li>a) Write a C program to demonstrate two way Inter Process Communications between two processes using pipes. Use SELECT system call to monitor the read-ends of the pipes.</li><li>b) Write a C program to demonstrate two way Inter Process Communications between</li></ul>

	two processes using FIFO.
9	Implement message transfer using Message Queue form of IPC. The client process request for a message that is sent by the Server process. Server returns a suitable message if the message is not available.
10	Write a program to demonstrate Use semaphores to avoid race conditions. (Hint: Create an integer variable in Shared Memory that is incremented by multiple processes causing race condition).

#### **Continuous Internal Evaluation (CIE); Theory (100 Marks)**

**CIE** is executed by way of quizzes (Q), tests (T) and experiential learning (EL). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for experiential learning is 20.

Total CIE is 30(Q) +50(T) +20(EL) =100 Marks.

#### Scheme of Continuous Internal Evaluation (CIE); Practical Test for 50 Marks

The Laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average marks (AM) over number of weeks is considered for 30 marks. At the end of the semester a test (T) is conducted for 10 marks. The students are encouraged to implement additional innovative experiments (IE) in the lab and are rewarded for 10 marks. Total marks for the laboratory is 50.

#### Total CIE is 30(AM) +10 (T) +10 (IE) =50 Marks.

#### Semester End Evaluation (SEE); Theory (100 Marks)

**SEE** for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part A and Part B. Part A consists of objective type questions for 20 marks covering the complete syllabus. Part B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

#### Scheme of Semester End Examination (SEE); Practical Exam for 50 Marks

SEE for the practical courses will be based on experiment conduction with proper results, is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

Semester End Evaluation (SEE): Theory (100 Marks) + Practical (50 Marks) = Total 150 Marks

**JavaFX GUI Programming**: Basic Concepts, Application Skeleton, Application Thread, JavaF Controls : Using Buttons and Events, Using Image and ImageView, Radio Buttons, Check Box, TextField, ScrollPane, MenuBasics, Menu Bar ,Menu and MenuItem.

Laboratory	Component
------------	-----------

**Familiarization with IDE** - compilation, debugging and execution considering simple Java programs.

**Implement programs on Fundamentals of Java Programming**: Data Types, Variables and Arrays, Operators, Control Statements:

- i) Write a Java program to convert time in seconds to hours, minutes and seconds, and display the output in format HH:MM:SS
- ii) Write a Java program which reads an integer n and find the number of combinations of a,b,c and d  $(0 \le a,b,c,d \le 9)$  where (a + b + c + d) will be equal to n.
- iii) Write a Java program to form a staircase shape of n coins where every k-th row must have exactly k coins.

Example 1: n = 3 The coins can form the following rows: \$ \$ We will return 2 rows. Example 2: n = 4 The coins can form the following rows: \$ \$ \$ \$ \$ \$ \$ \$ \$

- iv) Write a Java program to rearrange all the elements of an given array of integers so that all the odd numbers come before all the even numbers.
- v) Write a Java program that accepts three integers from the user and return true if two or more of them (integers ) have the same rightmost digit. The integers are non-negative.
- vi) Given is a 2-dimensional integer array [0..m-1, 0..n-1], each row and column of which is in ascending order (see example), write a Java program to find the row, column position of a specified number (row, column position) in a given 2-dimensional array.

#### PART-A

#### Classes and objects.

I

- Create a Java class called Complex with the following details as member variables within it.
   (i) Real (ii) Imaginary
  - Develop a Java program to perform addition and subtraction of two complex numbers by using the method add() and subtract() respectively, by passing object as parameter and display result using method display(). Initialize the real and imaginary values of the complex number using parameterized constructor. Also demonstrate overloading constructors and methods.
- Design an Address class with member variables Street num, city, state and country and appropriate constructor. Design a Student class with constructor (Student (String USN,
- . String Name, Address addr)), College class with constructor (College (String Name, Address addr)) and Employee class with constructor (Employee (String EmpID, String Name, Address addr)). Write a Java program to create 'n' Student objects, College Objects and Employee objects and print the student, college and employee addresses respectively and demonstrate passing of object as a parameter to the constructor.

#### Inheritance and Polymorphism.

3 Design a base class Circle with member variables (radius and color) of type double, methods (getRadius(), getArea()) and constructors (Circle(radius), Circle(radius, color)). Derive subclass called Cylinder from the superclass Circle with member variable (height) of type public (getHeight(), getVolume(), double, methods getArea()) and its constructors(Cylinder(height, radius), Cylinder(height, radius,color)). Create the two instances of cylinder and print similar cylinders if the area, volume and color of cylinders are same. Demonstrate the code reuse and polymorphism properties of Object oriented programming by inheriting the constructors and methods of the base class.

#### Package and Interfaces

4 Create a class Thirdsem. Put this class into a package called CSE. Define a method
. Welcomemsg which prints a line "Welcome to CSE dept- 3rd sem young budding Engineers".

Create a class Csedept. Put this class into a package called RVCE.

Inherit the class Thirdsem in CSE package to Csedept class in RVCE package and call Welcomemsg method to display welcome message and also verify Public method Overriding, Private method overriding and default method overriding from different packages in java with the same program

5 Create two classes called Lion and Snake that implements all the methods defined in an . interface Animal. Declare eat() method in Animal interface and display eating habits of that particular animal .Create an interface called Tired Animal. In Tired Animal interface add method definition to an existing interface by extending Animal interface to verify Extending Interface concept in java.

Note: Lion and Snake implement the required eat() method and has some of its own methods and instance variables

#### **Exception handling**

6

Design and implement a Java program for the following requirements:

- a) An Exception class called **Demonetization Exception** which returns the statement that says "Deposit of Old currency of (Rs ) crosses Rs. <u>5,000</u> and cannot be Deposited".
- b) A class called 'Account' that creates account with 500 Rs minimum balance with following methods.
  - i. deposit(amount, currencyType) method to deposit amount. This class should handle "Demonetization Exception" and print the message defined in this Exception class. If a currency type is "OLD" and the amount is greater than 5,000 then throw the Demonetization Exception, otherwise update the balance.
  - ii. currBalance() method that displays balance amount in the account.
- iii. withdraw(amount) method to withdraw amount and update the balance. Use proper control structure to check Balance should not go less than 500.
- c) A 'Customer' class that creates Account object and call the methods deposit(), withdraw() and currBalance() based on the user choice.

#### Multithreading

Design and develop a Java program for the fruit market problem. The farmer will be able to produce different types of fruits (apple, orange, grape, and watermelon), and put them in the market to sell. The market has limited capacity and farmers have to stand in a queue if the capacity is exceeded to sell their fruits. Consumers can come to the market any time and purchase their desired fruits; and if the fruits they want to buy runs out, they are willing to wait until the supply of that kind is ready. Examine and formulate an approach to address this problem and implement the same using Java constructs for programming.

#### Lambda Expressions

8 Write the following methods that return a lambda expression performing a specified action:

(i) PerformOperation isOdd(): The lambda expression must return true if a number is odd or false if it is even.

(ii) PerformOperation isPrime(): The lambda expression must return true if a number is prime or false if it is composite.

(iii) PerformOperation isPalindrome(): The lambda expression must return true if a number is a palindrome or false if it is not.

Write a JAVA program using above lambda expressions to take 2 integers as input where the first integer specifies the condition to check for (case 1 for Odd/Even, case 2 for Prime/Composite, or case 3 for Palindrome). The second integer denotes the number to be checked.

#### 9 Collections

.

- Write a Java program to create a new array list, add some colors (string) and perform the following operations:
  - (i) Add elements of List to ArrayList
  - (ii) Copy ArrayList to Array
  - (iii) Reverse ArrayList content
  - (iv) Get Sub list from an ArrayList.
  - (v) To sort a given ArrayList
  - (vi) Clone an ArrayList to another ArrayList

#### 10. String Handling

- i) Write a Java program to find the penultimate (next to last) word of a sentence.
- ii) Write program to replace a string "python" with "java" and "java" with "python" in a given string.
- iii) Write a program that splits a string into a number of substrings with the help of string split() method and then prints the substrings.

#### PART – B

Student will design, develop and implement an application using the appropriate OOP concepts using Java:

**Develop standalone Java application** with neat UI using JavaFX framework to demonstrate the important features of Object Oriented approach (Abstraction/Encapsulation/Data Hiding, Inheritance and Polymorphism) and also the important features of Java such as Interfaces, Packages, Inheritance, Exception Handling, Multithreaded Programming, Collection Framework, Lambda Expressions, Regular Expressions

Course	Outcomes: After completing the course, the students will be able to										
CO1:	Explore the fundamentals of Object-oriented concepts and apply features of object-oriented										
	programming of Java to solve real world problems.										
CO2:	Design Classes and establish relationship among Classes for various applications from problem definition.										
CO3:	Analyze and implement reliable object-oriented applications using Java features such as										
	Exception Handling, Multithreaded Programming, Lambda Expressions, Collection										
	framework, Strings, JavaFX GUI Programming.										
CO4:	Design and develop real world applications using Object Oriented concepts and Java										
	programming

Part A consists of objective type questions for 20 marks covering the complete syllabus. Part B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

	Design Thinking Lab							
Cour	rse Code	:	18IS47		CIE	:	50 Marks	
Cred	lits: L:T:P	:	0:0:2		SEE	:	50 Marks	
Hou	rs	:	26P		SEE Duration	:	02 Hours	
Cour	rse Learning O	bje	ctives: To enal	ble the students to:				
	Knowledge	4pj	olication: Ac	quire the ability to mak	e links across	dif	ferent areas of	
1	knowledge a	nd	to generate, o	levelop and evaluate idea	as and informati	on	so as to apply	
	these skills to	) pi	ovide solution	ns of societal concern				
2	Communication: Acquire the skills to communicate effectively and to present ideas							
4	clearly and c	ohe	rently to a spe	ecific audience in both the	e written and ora	l fo	orms.	
2	Collaboration: Acquire collaborative skills through working in a team to achieve							
3	common goa	ls.						
4	Independent	L	earning: Lea	arn on their own, refle	ect on their le	eari	ning and take	
4	appropriate a	cti	on to improve	it			-	

#### **Guidelines for Design Thinking Lab:**

- 1. The Design Thinking Lab (DTL) is to be carried out by a team of two-three students.
- 2. Each student in a team must contribute equally in the tasks mentioned below.
- 3. Each group has to select a theme that will provide solutions to the challenges of societal concern. Normally three to four themes would be identified by the by the department
- 4. Each group should follow the stages of Empathy, Design, Ideate, prototype and Test for completion of DTL.
- 5. After every stage of DTL, the committee constituted by the department along with the coordinators would evaluate for CIE. The committee shall consist of respective coordinator & two senior faculty members as examiners. The evaluation will be done for each student separately.
- 6. The team should prepare a Digital Poster and a report should be submitted after incorporation of any modifications suggested by the evaluation committee.

#### The Design Thinking lab tasks would involve:

- 1. Carry out the detailed questionnaire to arrive at the problem of the selected theme. The empathy report shall be prepared based on the response of the stake holders.
- 2. For the problem identified, the team needs to give solution through thinking out of the box innovatively to complete the ideation stage of DTL
- 3. Once the idea of the solution is ready, detailed design has to be formulated in the Design stage considering the practical feasibility.
- 4. If the Design of the problem is approved, the team should implement the design and come out with prototype of the system.
- 5. Conduct thorough testing of all the modules in the prototype developed and carry out integrated testing.
- 6. Demonstrate the functioning of the prototype along with presentations of the same.
- 7. Prepare a Digital poster indicating all the stages of DTL separately. A Detailed project report also should be submitted covering the difficulties and challenges faced in each stage of DTL.
- 8. Methods of testing and validation should be clearly defined both in the Digital poster as well as the report.

The students are required to submit the Poster and the report in the prescribed format provided by the department.

Course	Course Outcomes: After completing the course, the students will be able to							
CO 1:	Interpreting and implementing the empathy, ideate and design should be implemented by							
	applying the concepts learnt.							
CO 2:	The course will facilitate effective participation by the student in team work and							
	development of communication and presentation skills essential for being part of any of							
	the domains in his / her future career.							
CO 3:	Appling project life cycle effectively to develop an efficient prototype.							
CO 4:	Produce students who would be equipped to pursue higher studies in a specialized area							
	or carry out research work in an industrial environment.							

#### Scheme of Evaluation for CIE Marks:

### **Evaluation will be carried out in three phases:**

Phase	Activity	Weightage
Ι	Empathy, Ideate evaluation	10M
II	Design evaluation	15M
III	Prototype evaluation, Digital Poster presentation and report submission	25M
	Total	<b>50M</b>

#### Scheme of Evaluation for SEE Marks:

Sl. No.	Evaluation Component						
1.	Written presentation of synopsis: Write up	5M					
2.	Presentation/Demonstration of the project	15M					
3.	Demonstration of the project	20M					
4.	Viva	05M					
5.	Report	05M					
	Total	50M

	ple Integrals:				and an affin and a				
	Evaluation of double integrals, change of order of integration. Evaluation of triple integrals.								
Appli	Applications – Area, volume and mass – simple problems.								

Course	Outcomes: After completing the course, the students will be able to
CO1:	Understand the concept of partial differentiation, double integrals, vector differentiation,
CO2:	Solve problems on total derivatives of implicit functions, Jacobians, homogeneous linear differential equations, velocity and acceleration vectors.
CO3:	Apply acquired knowledge to find infinite series expansion of functions, solution of non- homogeneous linear differential equations and numerical solution of equations.
CO4:	Evaluate triple integrals, area, volume and mass, different operations using del operator on scalar and vector point functions, numerical solution of differential equations and numerical integration.

#### Continuous Internal Evaluation (CIE); Theory (50 Marks)

**CIE** is executed by way of quizzes (Q) and tests (T). A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. The two tests are conducted for 30 marks each and the sum of the marks scored from two tests is reduced to 30. Total CIE is 20(Q) + 30(T) = 50 Marks.

#### Semester End Evaluation (SEE); Theory (50 Marks)

**SEE** for 50 marks is executed by means of an examination. The Question paper for the course consists of five main questions, one from each unit for 10 marks adding up to 50 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

#### Scheme of Continuous Internal Examination and Semester End Examination

Phase	Activity	Weightage
Phase I	CIE will be conducted during the 3 rd semester and evaluated for 50 marks.	50%
III Sem	The test will have two components. The Quiz is evaluated for 15 marks and	
	second component consisting of questions requiring descriptive answers is	
	evaluated for 35 marks. The test & quiz will assess the skills acquired through	
	the training module.	
	SEE is based on the test conducted at the end of the 3 rd semester The test will	
	have two components a Quiz evaluated for 15 marks and second	
	component consisting of questions requiring descriptive answers is evaluated	
	for 35 marks.	
Phase II	During the 4 th semester a test will be conducted and evaluated for 50 marks.	50%
IV Sem	The test will have two components a Short Quiz and Questions requiring	
	descriptive answers. The test & quiz will assess the skills acquired through	
	the training module.	
	SEE is based on the test conducted at the end of the 4 th semester The test will	
	have two components. The Quiz evaluated for 15 marks and second	
	component consisting of questions requiring descriptive answers is	
	evaluated for 35 marks	
Phase III	At the end of the IV Sem Marks of CIE (3 rd Sem and 4 th Sem) is consolidated for	or 50 marks
At the end	(Average of Test1 and Test 2 (CIE 1+CIE2)/2.	
of IV	At the end of the IV Sem Marks of SEE (3 rd Sem and 4 th Sem) is consolidated for	or 50 marks
Sem	(Average of CIE 1 and CIE 2 (CIE 1+CIE2)/2.	

### **Curriculum Design Process**

### **Academic Planning And Implementation**

**Process For Course Outcome Attainment** 

### **Final CO Attainment Process**

# **Program Outcome Attainment Process**

# PROGRAM OUTCOMES (POs)

1. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation for the solution of complex engineering problems.

2. **Problem analysis:** Identify, formulate, research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety, and cultural, societal, and environmental considerations.

4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modelling to complex engineering activities, with an understanding of the limitations.

6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with the society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. Life-long learning: Recognise the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
