

RV COLLEGE OF ENGINEERING®

(Autonomous Institution Affiliated to VTU, Belagavi) R.V. Vidyaniketan Post, Mysore Road Bengaluru – 560 059

Bachelor of Engineering (B.E.) Scheme and Syllabus of III & IV Semesters

2018 SCHEME

ELECTRONICS & TELECOMMUNICATION ENGINEERING

VISION

Leadership in Quality Technical Education, Interdisciplinary Research & Innovation, with a Focus on Sustainable and Inclusive Technology

MISSION

- 1. To deliver outcome based Quality education, emphasizing on experiential learning with the state of the art infrastructure.
- 2. To create a conducive environment for interdisciplinary research and innovation.
- 3. To develop professionals through holistic education focusing on individual growth, discipline, integrity, ethics and social sensitivity.
- 4. To nurture industry-institution collaboration leading to competency enhancement and entrepreneurship.
- 5. To focus on technologies that are sustainable and inclusive, benefiting all sections of the society.

QUALITY POLICY

Achieving Excellence in Technical Education, Research and Consulting through an Outcome Based Curriculum focusing on Continuous Improvement and Innovation by Benchmarking against the global Best Practices.

CORE VALUES

Professionalism, Commitment, Integrity, Team Work, Innovation

RV COLLEGE OF ENGINEERING®

(Autonomous Institution Affiliated to VTU, Belagavi) R.V. Vidyaniketan Post, Mysore Road Bengaluru – 560 059

Bachelor of Engineering (B.E.) Scheme and Syllabus of III & IV Semesters

2018 SCHEME

DEPARTMENT OF ELECTRONICS & TELECOMMUNICATION ENGINEERING

Department Vision

Imparting quality education in Electronics and Telecommunication Engineering through focus on fundamentals, research and innovation for sustainable development

Department Mission

- Provide comprehensive education that prepares students to contribute effectively to the profession and society in the field of Telecommunication.
- Create state-of-the-art infrastructure to integrate a culture of research with a focus on Telecommunication Engineering Education
- Encourage students to be innovators to meet local and global needs with ethical practice
- Create an environment for faculty to carry out research and contribute in their field of specialization, leading to Centre of Excellence with focus on affordable innovation.
- Establish a strong and wide base linkage with industries, R&D organization and academic Institutions.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

PEO	Description			
PEO1	Acquire appropriate knowledge of the fundamentals of basic sciences, mathematics,			
	engineering sciences, Electronics & Telecommunication engineering so as to adapt to			
	rapidly changing technology.			
PEO2	Think critically to analyze, evaluate, design and solve complex technical and managerial			
	problems through research and innovation.			
PEO3	Function and communicate effectively demonstrating team spirit, ethics, respectful and			
	professional behavior.			
PEO4	To face challenges through lifelong learning for global acceptance.			

PROGRAM SPECIFIC OUTCOMES (PSOs)

PSO	Description
PSO1	Analyze, design and implement emerging Telecommunications systems using devices, sub-
	systems, propagation models, networking of Wireless and Wire line communication systems.
PSO2	Exhibit Technical skills necessary to choose careers in the design, installation, testing,
	management and operation of Telecommunication systems.

Lead Society: Institute of Electrical and Electronics Engineers (IEEE)

There are two text books prescribed by VTU for the Kannada Course:

- 1. Samskruthika Kannada (AADALITHA KANNADA);
- 2. Balake Kannada (VYAVAHARIKA KANNADA);

The first text book is prescribed for the students who know Kannada to speak, read and write (KARNATAKA STUDENTS). The second text book is for students who do not understand the Kannada language (NON-KARNATAKA STUDENTS)

	Semester: III							
	DISCRETE AND INTEGRAL TRANSFORMS							
				(Theory)				
			(Commo	on to EC, EE, EI & I	ET)			
Cou	rse Code	:	18MA31B		CIE	:	100 Marks	
Credits: L:T:P		:	4:1:0		SEE	:	100 Marks	
Total Hours		:	52L+13T		SEE Duration	:	3.00 Hours	
Cou	rse Learning C	bje	ectives: The students	s will be able to				
1	Understand th	e ez	xistence and basic co	oncepts of Laplace, F	ourier and z - transfo	orm	s.	
2	Demonstrate t	he	concepts of Laplace	transform to solve or	dinary differential ed	qua	tions.	
3	Analyze the c	onc	ept of periodic phen	omena and develop F	Fourier series.	•		
4								
5								

Unit-I 10 Hrs

Laplace Transform: Existence and uniqueness of Laplace transform (LT), transform of elementary functions, region of convergence. Properties - linearity, scaling, s - domain shift, differentiation in the s - domain, division by t, differentiation and integration in the time domain. LT of special functions - Periodic functions (square wave, saw-tooth wave, triangular wave, full & half wave rectifier), Heaviside unit step function, unit impulse function, t - shift property. Relevant MATLAB commands to develop additional insight into the concepts.

Unit – II 11 Hrs

Inverse Laplace Transform: Definition, properties, evaluation using different methods. Convolution theorem (without proof), problems. Application to solve ordinary linear differential equations. Relevant MATLAB commands to develop additional insight into the concepts.

Unit –III 11 Hrs

Fourier Series: Introduction, periodic function, even and odd functions. Dirichlet's conditions, Euler's formulae for Fourier series, complex Fourier series, problems on time periodic signals (square wave, half wave rectifier, saw-tooth wave and triangular wave), Fourier sine series, Fourier cosine series. Relevant MATLAB commands to develop Fourier series of functions.

Unit –IV 10 Hrs

Fourier Transform: Fourier integral theorem, complex Fourier transform, Fourier sine transform, Fourier cosine transform, properties - linearity, scaling, time-shift and modulation. Convolution theorem (without proof), problems. Parseval's identity. Relevant MATLAB commands to develop additional insight into the concepts.

Unit –V 10 Hrs

Z-Transform: Introduction, z - transform of standard functions, Region of convergence, properties - linearity, scaling, shifting theorem, initial and final value theorems. Inverse z - transform using power series and partial fraction expansions, convolution theorem (without proof), problems. Application to solve difference equations arising in communication and control systems. Relevant MATLAB commands to develop additional insight into the concepts.

Course	Course Outcomes: After completing the course, the students will be able to						
CO1	Understand the significance of fundamental concepts of transforms, inverse transforms and						
	periodic phenomena.						
CO2	Demonstrate the properties of transforms and inverse transforms, graphical representation of						
	various wave forms.						
CO3	Evaluate transforms of special functions, develop Fourier series of various type of functions.						
CO4	Apply transform techniques to solve differential equations and difference equations occurring						
	in engineering problems.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of Quizzes (Q), Tests (T) and Experiential learning (EL). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for experiential learning is 20.

Total CIE is 30(Q)+50(T)+20(EL) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

	Semester III						
	ENVIRONMENTAL TECHNOLOGY						
				(Theory)			
Cou	rse Code	:	18BT32A		CIE	:	50 Marks
Credits: L:T:P		:	2:0:0		SEE	:	50 Marks
Total Hours		:	26L		SEE Duration	:	02 Hours
Cou	rse learning o	bje	ctives: The student wi	ill be able to			
1	Understand t	he	various components of	of environment and t	he significance of t	he s	sustainability of
	healthy envir	oni	nent.				
2	Recognize th	e ii	nplications of differer	nt types of the wastes	produced by natura	l and	d anthropogenic
activity.							
3 Learn the strategies to recover the energy from the waste.							
4 Design the models that help mitigate or prevent the negative impact of proposed activity on the							
	environment.						

Unit-I 05 Hrs

Introduction: Environment: Components of environment, Ecosystem. Impact of anthropogenic activities on environment (agriculture, mining and transportation), Environmental education, Environmental acts & regulations, role of non-governmental organizations (NGOs), EMS: ISO 14000, Environmental Impact Assessment. Environmental auditing.

Unit – II 06 Hrs

Environmental pollution: Air pollution: point and non point sources of air pollution and their controlling measures (particulate and gaseous contaminants). Noise pollution, Land pollution (sources, impacts and remedial measures).

Water management: Water conservation techniques, water borne diseases & water induced diseases, arsenic & fluoride problems in drinking water and ground water contamination, advanced waste water treatment techniques.

Unit -III 06 Hrs

Waste management: Solid waste management, e waste management & biomedical waste management – sources, characteristics & disposal methods. Concepts of Reduce, Reuse and Recycling of the wastes. Energy: Different types of energy, conventional sources &non conventional sources of energy, solar energy, hydro electric energy, wind energy, Nuclear energy, Biomass & Biogas Fossil Fuels, Hydrogen as an alternative energy.

Unit –IV 05 Hrs

Environmental design: Principles of Environmental design, Green buildings, green materials, Leadership in Energy and Environmental Design (LEED), soilless cultivation (hydroponics), organic farming, use of biofuels, carbon credits, carbon foot prints, Opportunities for green technology markets, carbon sequestration.

Unit –V 04 Hrs

Resource recovery system: Processing techniques, materials recovery systems, biological conversion (composting and anaerobic digestion). Thermal conversion products (combustion, incineration, gasification, pyrolysis, use of Refuse Derived Fuels). Case studies of Biomass conversion, e waste.

Course	e Outcomes: After completing the course, the students will be able to
CO1	Identify the components of environment and exemplify the detrimental impact of anthropogenic
	activities on the environment.
CO2	Differentiate the various types of wastes and suggest appropriate safe technological methods to
	manage the waste.
CO3	Aware of different renewable energy resources and can analyze the nature of waste and propose
	methods to extract clean energy.
CO4	Adopt the appropriate recovering methods to recover the essential resources from the wastes for
	reuse or recycling.

Continuous Internal Evaluation (CIE); Theory (50 Marks)

CIE is executed by way of Quizzes (Q), Tests (T) and Experiential learning (EL). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks which will be reduced to 15marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 25 marks each and the sum of the marks scored from three tests is reduced to 30. The marks component for assignment is 05.

The total CIE for theory is 15(Q)+30(T)+05(EL) = 50 marks

Semester End Evaluation (SEE); Theory (50 Marks)

SEE for 50 marks is executed by means of an examination. The Question paper for each course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 10 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 08marks adding up to 40 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

	ANALOG ELECTRONIC CIRCUITS							
				(Theory and Pra	ctice)			
				(Common EE, EI	& ET)			
Course Code			18EE33		CIE	:	100 + 50 Marks	
Credits: L:T:P		:	4:0:1		SEE	:	100 + 50 Marks	
Total Hours		:	50L+33P		SEE Duration	:	3.00+3.00Hours	
Cou	rse Learning	Obj	ectives:					
1	To study and	d un	derstand the v	rarious biasing metho	ds and ac models:	for tr	ansistors	
2	2 To study different parameters and basic circuits of op-amps							
3	3 To design signal generation circuits, wave shaping circuits and active filters using Op-amps.							
4								

Unit-I 09 Hrs

Transistors Biasing: fixed bias and voltage divider bias. Bias stabilization, stability factor, Thermal runaway.

BJT AC Analysis: Amplification in AC Domain, BJT Modelling- r_e model and Hybrid Equivalent Model for CE and CC configurations.

MOSFET-Structure and characteristics, voltage divider bias for depletion and enhancement type MOSFETs.

Unit – II 11 Hrs

Frequency response of BJT Amplifiers: General frequency considerations, Normalization process, low frequency analysis, high frequency response.

Power Amplifiers: Series fed and Transformer coupled class A, class B and class AB amplifiers, IC TS472 power amplifier, heat sink for power amplifiers.

Feedback Amplifiers: Characteristics of Feedback, Feedback Topologies, Analysis of series-series and series-shunt Feedback Amplifiers.

Unit -III 11 Hrs

Operational amplifier: Internal Structure of Op-Amps, Parameters and Characteristics of Practical Op-Amps.

OP-AMPS Applications: Basic applications, Instrumentation amplifier, AC amplifier, V to I & I to V converters, Opamp circuits using diode, Sample & Hold.

Schmitt trigger - regenerative comparator, Astable& mono - stable multi- vibrators.

Wave form generator: Square wave generator, Triangular wave generator and saw tooth-wave generator.

Unit –IV 10 Hrs

Active Filters: Comparison of Active and Passive filters. Butterworth filters(Butterworth function for n=2 and n=3), First order low and high pass filter, Second order Low and high pass filters, Butterworth second order low pass filters. Band pass filter (wide-band and narrow band), Band reject filters (wide-band and narrow band) and All-pass filter.

Oscillators: Principles of oscillators, Phase shift oscillator, Quadrature Oscillator, Three phase oscillator, Wein Bridge Oscillator.

Unit –V 09 Hrs

Analog IC's And Applications: Voltage controlled oscillators-NE/SE-566, 555 Timer-functional block diagram, monostable and astablemultivibrators and its applications, Digital to analog converters-R-2R ladder, weighted resistor D/A converters, IC D/A converters, Analog to digital converters-successive approximation A/D converter and IC A/D converter.

Voltage Regulators: Discrete Voltage Regulator, IC Voltage Regulators (IC 78XX, 79XX, LM317).

Lab Experiments:

- **1.** Precision Rectifiers
 - a. To analyze the working of half wave rectifier using operational amplifier µA741
 - **b.** To analyze the working of full wave rectifier using operational amplifierµA741
- **2.** Design and Verification of
 - a. To study the working of peak detector using operational amplifier µA741
- $\boldsymbol{b}_{\boldsymbol{\cdot}}$ To design and implement precision clamping circuit for given voltageusing $\mu A741.$
- 3. To design and implement a Schmitt trigger circuit forgiven UTP & LTP using µA741.
- **4.** Peak detector and clamping circuit using OrCadPspice
 - **a.** To design and simulate the Peak detector using operational amplifierusing OrCadPspicesoftware
 - **b.** To design and simulate precision clamping circuit for givenvoltage using OrCadPspicesoftware.
- **5.** Wave FormGenerator
 - a. Design the Square & triangular-wave generator using µA74
- **6.** To design and implement Voltage controlled oscilloscope UsingNE/ES566
- **7.** Non linearapplications
 - **a.** To design an Astablemultivibrator for a given frequency and duty cycleusing NE555timer
 - **b.** To design a Monostablemultivibrator for a given frequency using NE555timer.
- **8.** Simulate the waveform generators using OrCadPspicesimulator
- **9.** To realize 2 bitflash ADC using LM 324opamp.
- **10.** To design and test a 4 bit DAC using R-2R laddernetwork
- **11.** To design and simulate the second order Low pass and high pass activeFilter using OrCadPspice.
- 12. Simulation of OSCILLATOR and AMPLIFIER using ORCADPspice

Course	Course outcomes: On completion of the course, the student should have acquired the ability to						
CO1	Understand and Remember the basic fundamentals of transistor biasing and operational amplifiers						
CO2	Analyse the performance of Op-amp and build simple circuits using op-amps						
CO3	Apply the concepts to design various applications of op-amps						
CO4	Design a complete analog electronic system using various analog IC's for a specific						
	application.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of Quizzes (Q), Tests (T) and Experiential learning (EL). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for experiential learning is 20.

Total CIE is 30(Q)+50(T)+20(EL) = 100 Marks.

Scheme of Continuous Internal Evaluation (CIE); Practical Test for 50 Marks

The Laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average marks (AM) over number of weeks is considered for 30 marks. At the end of the semester a test (T) is conducted for 10 marks. The students are encouraged to implement additional innovative experiments (IE) in the lab and are rewarded for 10 marks. Total marks for the laboratory is 50.

Total CIE is 30(AM) + 10(T) + 10(IE) = 50 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part A and Part B. Part A consists of objective type questions for 20 marks covering the complete syllabus. Part B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Scheme of Semester End Examination (SEE); Practical Exam for 50 Marks

SEE for the practical courses will be based on experiment conduction with proper results, is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

Semester End Evaluation (SEE): Theory (100 Marks) + Practical (50 Marks) = Total 150 Marks

Tota	l Hours	:	52L+33P		SEE Duration	:	03+03 Hours
Cou	rse Learning O	bje	ectives: The students	s will be able to			
1			ous types of logic far		concept logic func	tior	ns, SOP, POS and
	canonical exp	ress	sions, simplification	techniques.			
2	Design and u	se	standard combination	onal circuit buildin	g blocks: multiple	xer	s, demultiplexers,
	binary decode	rs a	and encoders, decode	ers, Arithmetic Circ	cuits, code converte	ers	
3	3 Implement different sequential circuits using various flip flops to realize state machines for						
	given timing behavior.						
4	4 Analyze processor organization and design arithmetic & logic unit by using combinational &						
	sequential circuits.						

Unit-I 10 Hrs

Digital Integrated Circuits: Digital IC Logic Families: Transistor-Transistor Logic (Totem pole TTL), Emitter Coupled Logic (ECL), Complementary MOS (CMOS) Logic.

Characteristics and Performance Parameters of CMOS Inverter: Introduction, Propagation delay, Sourcing, Sinking, Fan-in, Fan-out, V_{IH}, V_{OH}, V_{IL}, V_{OL} and corresponding currents, Noise margin, Power dissipation, power consumption, power-delay product as a figure of merit. **Simplification Techniques:** 5-variable K-Map, Quine-McClusky Minimization, Numerical Examples.

Unit – II 11 Hrs

Combinational Circuits Design and Analysis: Parallel Adder/Subtractor using IC 7483, Decoders, Encoders, Multiplexers and De-Multiplexers, Priority encoder and Magnitude comparator, Arithmetic circuits and code converters using Multiplexers and Decoders, Concepts of ripple carry and carry look ahead adders, BCD adder.

Unit –III 11 Hrs

Sequential Circuits Design and Analysis-I: Introduction, Latches and Flip Flops, Triggering of Flip Flops, Flip Flop Excitation Tables, Flip-Flop conversions, Registers, Shift Registers and Various Operations, Ring counters, Johnson counters, Ripple Counters.

Unit –IV 10 Hrs

Sequential Circuits Design and Analysis II: Introduction, FSM (Melay and Moore), Analysis of Clocked Sequential Circuits, State table and Reduction, Design of synchronous Counters, Programmable counters. Design with State Equations, Sequence generators (PRBS).

Unit –V 10 Hrs

Design of a Processor Unit: Introduction, Processor Organization, Arithmetic Logic Unit, Design of Arithmetic Unit, Design of Logic unit, Design of Arithmetic and Logic unit, Status Register, Design of Shifter, The Complete Processor unit and op-code generation.

Practical's:

Note: a) Out of ten experiments, for seven experiments manual will be provided.

Each of these would also include practice experiments. Last three experiments are case studies and are compulsory.

- b) Practice questions: Students should design the experiment in advance and practice the lab.
 - 1. a) Realization of Binary Adder and Subtractor using universal gates and IC-7483.
 - b) Practice Question: Design a parallel binary subtractor to get actual difference based on the value of Cout(correction circuit).
 - 2. a) Arithmetic circuits- Realize the given Boolean expressions using MUX/DEMUX using IC-74153, IC-74139.
 - b) Practice Question: Realize FA/FS using MUX/DEMUX.
 - 3. a) Code convertors i) Binary to Gray ii) BCD to Excess-3 using Decoder/demux.
- b) Practice Question i) Binary to excess-3 using IC-7483 ii) Gray to Binary using Decoder
 - 4. a) Design a two-bit magnitude comparator using logic gates.
 - b) Drive the LED Display using IC-7447.
 - c) Practice Question: Design an n-bit comparator using IC-7485(make use of cascading facility)
 - 5. a) Design a Master JK-FF using NAND gates. Also design D-FF and T-FF using same. Observe the waveform using CRO.
 - b) Practice Question: Design a Master Slave JK-FF using P-Spice simulation software and observe the waveforms.
 - 6. a) Realization of asynchronous mod-n counter using IC-7490, IC-7493.
 - b) Using IC-7495 perform SISO, SIPO, PISO, PIPO, Shift left operations.
 - c) Design ring and Johnson counter using IC-7495
 - b) Practice Question: Design mod-99 counter using IC-7490.
 - 7. a) Design of synchronous 3-bit up/down counter using IC-7476/IC-74112.
 - b) Design a synchronous counter to count given sequence.
 - c) Using presettable counters IC-74192/193 perform mod-n counts.
 - d) Practice Question: Design a synchronous 4-bit up/down counter using P-Spice simulation software and observe the waveforms.
 - 8. Design a sequence generator using a shift register to obtain a sequence Y=100010011010111
 - 9. Using IC-74192/193, drive the LED display and generate a given sequence
 - 10. Design a 2-bit ALU operation using P-Spice simulation software and observe the waveforms.

Course	e Outcomes: After completing the course, the students will be able to
CO1	Apply the knowledge of digital electronics to construct combinational and sequential sub-
	systems useful for digital system designs.
CO2	Develop a solution to real-life problems based on the knowledge of digital electronics.
CO3	Implement the engineering solutions with the help of modern engineering tools,hardware
	design and practices.
CO4	Analyze and update the knowledge for obtaining sustainable solutions for technological
	enhancements in the field of digital electronics.

Refere	ence Books

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of Quizzes (Q), Tests (T) and Experiential learning (EL). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for experiential learning is 20.

Total CIE is 30(Q)+50(T)+20(EL) = 100 Marks.

Scheme of Continuous Internal Evaluation (CIE); Practical Test for 50 Marks

The Laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average marks (AM) over number of weeks is considered for 30 marks. At the end of the semester a test (T) is conducted for 10 marks. The students are encouraged to implement additional innovative experiments (IE) in the lab and are rewarded for 10 marks. Total marks for the laboratory is 50.

Total CIE is 30(AM) + 10(T) + 10(IE) = 50 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part A and Part B. Part A consists of objective type questions for 20 marks covering the complete syllabus. Part B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Scheme of Semester End Examination (SEE); Practical Exam for 50 Marks

SEE for the practical courses will be based on experiment conduction with proper results, is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

Semester End Evaluation (SEE): Theory (100 Marks) + Practical (50 Marks) = Total 150 Marks

Cou	rse Learning (Obj	ectives: The student	ts will be able to			
1	1 Apply knowledge of mathematics, science, and engineering basics to the analysis and design of						
	electrical systems involving electric and magnetic fields as well as electromagnetic waves.						
2	2 Interpret and apply the concepts which comes in Antenna and RF communication.						
3	Develop and	des	ign mathematical m	odels of communicat	tion channels.		

Unit-I 07 Hrs

Electrostatics 1: Coulomb's law, illustrative examples, Electric Field Intensity, Applications (field due to Line charge distribution, Surface charge distribution- Sheet, Circular ring, disk), Illustrative examples. Flux, Flux density, Gauss's Law, Divergence Theorem(qualitative treatment), Application of Gauss's Law (Field due to Continuous Line Charge, Sheet Charge, Metal Sphere, Spherical shell) Illustrative examples.

Unit – II 09 Hrs

Electrostatics-2: Electric Potential, Relation between E and V, Applications (Field and potential due to Line charge distribution, Surface charge distribution- sheet), Energy Density in an Electric Field, Illustrative examples. Energy Density, Boundary Conditions (dielectric-dielectric, dielectric-conductor), Poisson's and Laplace's Equations, Applications of Laplace's and Poisson's Equations (Different capacitors), Illustrative examples.

Unit –III 09 Hrs

Magneto Static Fields-1: Current, Current density, Biot -Savart Law, Applications (Infinite linear conductor, current carrying in loop, solenoid), Magnetic Flux and Flux Density, Ampere's Circuital Law, Stroke's theorem (qualitative treatment), Applications (Infinite line current, sheet current, coaxial transmission line), Problems.

Unit –IV 08 Hrs

Magneto Static Fields-2: Magnetic potentials, Magnetic energy, Magnetic Boundary Conditions, Force due to magnetic fields(Charged particle, Current element), Lorentz Force equation, Inductors. Maxwell's Equations: Introduction, Faraday's Law, Transformer and Motional EMFs, Displacement Current, Maxwell's Equations in Final Forms, Time-Varying Potentials, Time-Harmonic Fields, Illustrative examples.

Unit –V 07 Hrs

Electromagnetic Waves: Introduction, Waves in General, Wave Propagation in Lossy Dielectrics, Plane Waves in Lossless Dielectrics, Plane Waves in Free Space, Plane Waves in Good Conductors, Power and the Poynting Vector, Numericals, Reflection of a Plane Wave at Normal Incidence. Illustrative examples.

Course	Outcomes: After completing the course, the students will be able to
CO1	Explain fundamental laws governing electromagnetic fields and evaluate the physical quantit
	-ies of electromagnetic fields.
CO2	Determine the electromagnetic fields exerted on charged particles, current elements and other
	devices.
CO3	Design electromagnetic energy storage devices like capacitor, inductor which are frequently
	used in electrical systems.
CO4	Deduce and justify the concepts of electromagnetic waves, means of transporting energy fro
	m two different medium.

Multiple Integrals: Evaluation of double integrals, change of order of integration. Evaluation of triple integrals. Applications – Area, volume and mass – simple problems.

Course	e Outcomes: After completing the course, the students will be able to
CO1	Understand the concept of partial differentiation, double integrals, vector differentiation,
	solutions of higher order linear differential equations and requirement of numerical methods.
CO2	Solve problems on total derivatives of implicit functions, Jacobians, homogeneous linear
	differential equations, velocity and acceleration vectors.
CO3	Apply acquired knowledge to find infinite series expansion of functions, solution of non-
	homogeneous linear differential equations and numerical solution of equations.
CO4	Evaluate triple integrals, area, volume and mass, different operations using del operator on
	scalar and vector point functions, numerical solution of differential equations and numerical
	integration.

ಸ್ಥಳೀಯ ಅಥವಾ ಪ್ರಾದೇಶಿಕ ಭಾಷಾ ಕಲಿಕೆಯ ಅವಶ್ಯಕತೆ, ಭಾಷಾ ಕಲಿಕೆಯ ಸುಲಭ ವಿಧಾನಗಳು, ಸಂಭಾಷಣೆಗಾಗಿ ಸುಲಭ ಸೂಚ್ಯಗಳು ಕನ್ನಡ ಭಾಷೆಯ ಇತಿಹಾಸ.

ಂನ್ನಡ ಭಾಷಯ ಇತಹಾನ.	
ಅಧ್ಯಾಯ $ {f II}$	4Hrs

ಕನ್ನಡ ಅಕ್ಷರಮಾಲೆ ಹಾಗೂ ಉಚ್ಛಾರಣೆ:

ಕನ್ನಡ ಅಕ್ಷರಮಾಲೆ, ಒತ್ಪಕ್ಷರ, ಕಾಗುಣಿತ, ಉಚ್ಚಾರಣೆ, ಸ್ವರಗಳು ಉಚ್ಚಾರಣೆ, ವ್ಯಂಜನಗಳ ಉಚ್ಚಾರಣೆ.

ಅಧ್ಯಾಯ – III	4Hrs
--------------	------

ಸಂಭಾಷಣೆಗಾಗಿ ಕನ್ನಡ ಪದಗಳು:

ಏಕವಚನ, ಬಹುವಚನ, ಲಿಂಗಗಳು (ಸ್ತ್ರೀಲಿಂಗ, ಪುಲ್ಲಿಂಗ) ಪ್ರಶ್ನಾರ್ಥಕ ಪದಗಳು, ವಿರುದ್ಧಾರ್ಥಕ ಪದಗಳು, ಅಸಮಂಜಸ ಉಚ್ಚಾರಣೆ, ಸಂಖ್ಯಾ ವ್ಯವಸ್ಥೆ, ಗಣಿತದ ಚಿಹೈಗಳು, ಭಿನ್ನಾಂಶಗಳು.

ತರಕಾರಿಗಳ ಹೆಸರುಗಳು, ತಿಂಡಿಗಳ ಹೆಸರುಗಳು, ಆಹಾರಕ್ಕೆ ಸಂಬಂಧಿಸಿದ ಪದಗಳು, ಕಾಲ/ಸಮಯಕ್ಕೆ ಸಂಬಂಧಿಸಿದ ಪದಗಳು, ದಿಕ್ಕುಗಳ ಹೆಸರುಗಳು, ಭಾವನೆಗೆ ಸಂಬಂಧಿಸಿದ ಪದಗಳು, ಮಾನವ ಶರೀರದ ಭಾಗಗಳು, ಸಂಬಂಧದ ಪದಗಳು, ಸಾಮಾನ್ಯ ಸಂಭಾಷಣೆಯಲ್ಲಿ ಬಳಸುವಂತಹ ಪದಗಳು.

ಅಧ್ಯಾಯ $ {f IV}$	4Hrs

ಸಂಭಾಷಣೆಯಲ್ಲಿ ಕನ್ನಡ ಬಳಕೆ:

ನಾಮಪದಗಳು, ಸರ್ವನಾಮಗಳು, ನಾಮವಿಶೇಷಣಗಳು, ಕ್ರಿಯಾಪದಗಳು, ಕ್ರಿಯಾವಿಶೇಷಣಗಳು, ಕನ್ನಡದಲ್ಲಿ ಸಂಯೋಜನೆಗಳು, ಉಪಸರ್ಗಗಳು, ಪ್ರಶ್ನಾರ್ಥಕ ಪದಗಳು, ವಿಚಾರಣೆಯ / ವಿಚಾರಿಸುವ / ಬೇಡಿಕೆಯ ವಾಕ್ಯಗಳು. ಕನ್ನಡದಲ್ಲಿ ಚಟುವಟಿಕೆಗಳು, ಶಬ್ದಕೋಶ, ಸಂಭಾಷಣೆ.

	ಕ ಕನ್ನಡದ ಕಲಿಕಾ ಫಲಿತಾಂಶಗಳು :
	ನಿತ್ಯ ಜೀವನದಲ್ಲಿ ಆಡುಭಾಷೆಯ ಬಳಕೆ.
	ಸಂದರ್ಭ, ಸನ್ನಿವೇಶಕ್ಕನುಗುಣವಾಗಿ ಸರಳ ಕನ್ನಡ ವಾಕ್ಯಗಳ ಬಳಕೆ.
	ಗೌರವ ಸಂಬೋಧನೆಯ ಬಳಕೆ.
CO4:	ಇತರರೊಡನೆ ಸುಲಭ ಸಂವಹನ.

ಆಧಾರ	ಪುಸ್ತಕಗಳು :
1	ವ್ಯವಹಾರಿಕ ಕನ್ನಡ ಪಠ್ಯಪುಸ್ತಕ, ಎಲ್.ತಿಮ್ಮೇಶ್ ಮತ್ತು ವಿ.ಕೇಶವಮೂರ್ತಿ, ಪ್ರಸಾರಾಂಗ, ವಿಶ್ವೇಶ್ವರಯ್ಯ ತಾಂತ್ರಿಕ ವಿದ್ಯಾಲಯ, ಬೆಳಗಾಂ.
2	ಕನ್ನಡ ಕಲಿ, ಕೆ.ಎನ್.ಸುಬ್ರಹ್ಮಣ್ಯಂ, ಎನ್.ಎಸ್.ನರಹರಿ, ಎಚ್.ಜಿ.ಶ್ರೀನಿವಾಸ 'ಪ್ರಸಾದ್, ಎಸ್.ರಾಮಮೂರ್ತಿ ಮತ್ತು ಎಸ್.ಸತ್ಯನಾರಾಯಣ, 2ನೇ ಮುದ್ರಣ 2019, ರಾ.ವಿ.ತಾಂತ್ರಿಕ ಮಹಾವಿದ್ಯಾಲಯ, ಬೆಂಗಳೂರು.
3	ಮಾತನಾಡುವ ಕನ್ನಡ, ಕನ್ನಡ ಸಾಹಿತ್ಯ ಪರಿಷತ್, ಬೆಂಗಳೂರು.

Continuous Internal Evaluation (CIE); (50 Marks)

CIE is executed by way of quizzes (Q), tests (T) and Activity. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks and the sum of the marks scored from two quizzes is reduced to 10. The two tests are conducted for 50 marks each and the sum of the marks scored from two tests is reduced to 30. The marks component for Activity is 10. **Total CIE is 10(Q) + 30(T) + 10(A) = 50 Marks.**

Semester End Evaluation (SEE); Theory (50 Marks)

SEE for 50 marksis executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 25 marks covering the complete syllabus. Part – B consists of essay type questions, one from each unit for 5 marks adding up to 25 marks.

Continuous Internal Evaluation (CIE); (50 Marks)

CIE is executed by way of quizzes (Q), tests (T) and Activity. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks and the sum of the marks scored from two quizzes is reduced to 10. The two tests are conducted for 50 marks each and the sum of the marks scored from two tests is reduced to 30. The marks component for Activity is 10. Total CIE is 10(Q) + 30(T) + 10(A) = 50 Marks.

Semester End Evaluation (SEE); Theory (50 Marks)

SEE for 50 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 10 marks covering the complete syllabus. Part – B is for 40 marks. It consists of essay type questions. Student has to answer any 4 questions out of 5 questions, each question carries 10 marks.

	Semester: IV												
	LINEAR ALGEBRA, STATISTICS AND PROBABILITY THEORY												
	(Theory)												
	(Common to EC, EE, EI & ET)												
Cou	Course Code : 18MA41B CIE : 100 Marks												
Cred	dits: L:T:P	:	4:1:0		SEE	:	100 Marks						
Total Hours : 52L+13T SEE Duration : 3.													
Cou	rse Learning C	bje	ectives: The students	s will be able to									
1	Understand th	e b	asics of Linear Alge	bra and Probability th	neory.								
2	Demonstrate t	he	concepts of linear tr	ansformation, orthogo	onality and factorizat	ion	of matrices.						
3	Apply the kr	ow	ledge of the statis	tical analysis and th	neory of probability	in	the study of						
	uncertainties.		-										
4	Use probabili	ty	and sampling theor	ry to solve random	physical phenomena	a aı	nd implement						
	appropriate di	stri	bution models.										
5	Use mathemat	tica	l IT tools to analyze	and visualize the abo	ove concepts.								

Unit-I 10 Hrs

Linear Algebra – I: Vector spaces, subspaces, linear dependence, basis, dimension, four fundamental subspaces. Rank and nullity theorem (without proof). Linear transformations- projection, rotation and reflection matrices, matrix representation, kernel and image of a linear transformation.

Unit – II 11 Hrs

Linear Algebra – II: Orthogonal and orthonormal bases, Gram-Schmidt process, QR- factorization, Eigen values and Eigen vectors (recapitulation). Diagonalization of a matrix (symmetric matrices), singular value decomposition. SVD applied to digital image processing (using MATLAB).

Unit –III 11 Hrs

Statistics: Central moments, mean, variance, coefficients of skewness and kurtosis in terms of moments. Curve fitting by method of least squares, fitting of curves – Polynomial, exponential and power functions. Correlation and linear regression analysis –problems. Simulation using MATLAB.

Unit –IV 10 Hrs

Probability: Basic concepts and Baye's rule. Random variables - Discrete and continuous, probability mass function, probability density function, cumulative density function, mean, variance - problems. Joint probability distribution function - Discrete and continuous, covariance, correlation and problems related to applications. Simulation using MATLAB.

Unit –V 10 Hrs

Probability Distributions: Discrete and continuous distributions - Binomial, Poisson, Exponential and Normal. Sampling theory - Sampling, sampling distributions, standard errors, student's t-distribution, chi-square distribution as a test of goodness of fit, problems. Simulation using MATLAB.

Course	e Outcomes: After completing the course, the students will be able to
CO1	Understand the fundamental concepts of linear algebra, probability and sampling theory.
CO2	Solve the problems of vector spaces, linear transformation, measures of statistical data, curve
	fitting and functions of random variables.
CO3	Apply the acquired knowledge to solve the problems on factorization of a matrix, correlation,
	regression, probability and sampling distributions.
CO4	Evaluate decomposition of a matrix and estimate goodness of fit of problems occurring in
	engineering applications.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of Quizzes (Q), Tests (T) and Experiential learning (EL). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for experiential learning is 20. Total CIE is 30(Q)+50(T)+20(EL) =100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Semester: IV											
ANALOG COMMUNICATION											
			(Theory & Practice))							
Course Code	:	18ET43		CIE	:	100+50 Marks					
Credits: L:T:P	:	3:0:1		SEE	:	100+50 Marks					
Total Hours : 40L+33P SEE : 3.00+3.00Hrs											

Course Learning Objectives: The students will be able to

- 1 Understand the functioning of a Communication system.
- Analyze various analog modulation schemes.
- 3 Classify different types of noise and its effect on communication systems.
- 4 Describe the working of the radio communication systems and Pulse modulation techniques.
- 5 Design and build the analog modulation and demodulation circuits for different applications.

UNIT-I 7Hrs

Introduction: Elements of Communication systems, Transmission of Message signals, Limitations & Resources of Communication systems.

Filtering & Signal Distortion: Linear Distortion & Equalization, Ideal Low-pass filters, Band pass transmission, Phase delay and Group delay, Numerical Problems.

UNIT-II 10Hrs

Amplitude Modulation: Time domain and frequency domain descriptions, AM generation and AM detection. Envelope detector.

DSBSC: Time domain and frequency domain descriptions, generation, coherent detection, Costas loop. Quadrature Carrier multiplexing;

SSBSC: Time domain and frequency domain descriptions, generation – Filtering method, Phase discrimination method. Coherent detection.

VSB: Generation and Detection. Comparison of AM techniques, Numerical Problems.

UNIT-III 10Hrs

Angle Modulation Techniques: Basic concepts, Phase Modulation, Frequency Modulation – Direct and Indirect methods, FM-Demodulation using PLL, Pre emphasis &De emphasis in FM, Numerical Problems.

Applications: Frequency Translation, Frequency Division Multiplexing, AM Radio, FM Radio, FM Stereo Multiplexing.

UNIT-IV 7 Hrs

Noise :Shot noise, Resistor noise, white noise; Spectral characteristics of Random signals and noise, Noise-equivalent Bandwidth; Noise figure, Noise temperature

Noise in Receivers: Noise in AM receivers, Noise in FM reception, Numerical Problems.

UNIT-V 6Hrs

Digital Coding of Analog Waveforms: Sampling, Sampling Theorem, Pulse Modulation, Quantization, Coding and Regeneration, Pulse code Modulation, Differential Pulse Code Modulation, Delta modulation, Adaptive Delta Modulation, Numerical Problems.

LABORATORY EXPERIMENTS

I. The following experiments to be Conducted using hardware.

- 1. Conduct an experiment to demonstrate Amplitude modulation and demodulation.
- 2. Conduct an experiment to demonstrate Frequency modulation and demodulation.
- 3. Conduct an experiment to generate DSBSC waveform using Ring Modulator.
- 4. Conduct an experiment to generate PAM & to demodulate PAM wave.
- 5. Conduct an experiment to demonstrate Pre-emphasis and De-emphasis.
- 6. Conduct an experiment to verify the sampling theorem for following criterions.
 - Under sampling
 - Critical sampling
 - Over Sampling

II. The following experiments to be demonstrated using Virtual Instrumentation (NI Lab view).

- 1. Simulate and analyze AM & DSBSC modulation and demodulation.
- 2. Simulate and analyze SSBSC & VSB modulation and demodulation.

- 3. Simulate and analyze Pulse amplitude modulation and demodulation.
- 4. Simulate and analyze Low pass & High pass filters and plot their frequency responses.
- 5. Simulate and analyze Band pass & Band elimination filters and plot their frequency responses.
- 6. Simulate and analyze Frequency modulation& demodulation.

Cou	Course Outcomes: After completing the course, the students will be able to										
CO	CO1 Explain fundamental concepts of analog communication.										
CO	Compare the performance of various analog modulation techniques.										
CO	B Design various analog modulation & demodulation circuits.										
CO	Evaluate the performance of various analog modulation & demodulation circuits.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of Quizzes (Q), Tests (T) and Experiential learning (EL). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for experiential learning is 20.

Total CIE is 30(Q) + 50(T) + 20(EL) = 100 Marks.

Scheme of Continuous Internal Evaluation (CIE); Practical Test for 50 Marks

The Laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average marks (AM) over number of weeks is considered for 30 marks. At the end of the semester a test (T) is conducted for 10 marks. The students are encouraged to implement additional innovative experiments (IE) in the lab and are rewarded for 10 marks. Total marks for the laboratory is 50.

Total CIE is 30(AM) + 10(T) + 10(IE) = 50 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part A and Part B. Part A consists of objective type questions for 20 marks covering the complete syllabus. Part B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Scheme of Semester End Examination (SEE); Practical Exam for 50 Marks

SEE for the practical courses will be based on experiment conduction with proper results, is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

Semester End Evaluation (SEE): Theory (100 Marks) + Practical (50 Marks) = Total 150 Marks

MICROPROCESSOR & MICROCONTROLLER									
(Theory & Practice)									
(Common to EI, EC, EE & ET)									
Cou	rse Code	:	18EI44	CIE		:	100+50 Marks		
Cred	Credits: L:T:P		3:0:1		SEE		100+50 Marks		
Tota	Total Hours		39L+33P		SEE Duration		03+03 Hours		
Course Learning Objectives: The students will be able to									
1	Specify, design, implement, and debug simple microprocessor-based applications using the								
	Intel 8086 architecture.								
2	Understand & Analyze the architecture of 8051 microcontroller.								
3	Use software development tools to assemble, test and debug the programs by using breakpoints,								
	single-stepping, monitoring the changes in register/memory contents, on a hardware platform or								
	on an emulator.								
4	Apply assembly directives and assembly language to implement flow control (sequential,								
	conditional and iterative).								
5	Design and in	Design and interface the external components of microprocessor and microcontroller.							

Unit-I 07 Hrs

MPU Organization: Instruction set Architectures, Harvard & Von-Neuman Architectures, Micro programmed & Hardwired Control unit, Floating Point & Fixed-Point Processor, Endianness,

Intel's 8086 architecture, Pin groups, Functioning, Segmentation, Address generation, Stack, Interrupts.

Unit – II 09 Hrs

8086 Assembly Language Programming: Addressing Modes of 8086, Instruction Format, Program Development Tools, Assembler Directives, Instruction Set of 8086: Data Transfer Instructions, Arithmetic Instructions, Bit Manipulation Instructions, Branching Instructions, Processor Control Instructions, String Instructions, Macros, Procedures, Assembly Language Programming Examples.

Unit –III 09 Hrs

Hardware of 8051 Microcontrollers: Introduction to Embedded system, Microcontroller, Comparison of Microprocessor and Microcontroller, Intel MCS 51 family, Architecture and Pin Functions of 8051 Microcontroller, CPU Organization, Program Counter, Timing and Machine Cycles, Internal Memory Organization, Registers, Stack, Input/ Output Ports, Counters and Timers, Interrupts, Power Saving modes.

Unit –IV 07 Hrs

8051 Microcontroller Based System Design: I/O Port Programming, Programming timers, Asynchronous Serial Data Communication, Interrupt Service Routines. Programming in C, Inline Assembly, Interfacing DAC, Interfacing Matrix Keyboard and Seven Segment Displays, Interfacing ADC in polled mode & Interrupt Mode, Interfacing LCD.

Unit –V 07 Hrs

Peripheral Based Systems: Clock generator(8284), Memory Devices, Address Decoding, Interfacing Memory, I/O sub System: Busy wait, DMA, Interrupt Driven, Memory Maps, I/O Port address decoding, Introduction to 8255, Interfacing 8255 with 8086, Interrupt Based IO Design.

Practical: Processor & Controller Lab:

Experiments with 8086 Assembly using MASM

- 1. Data Transfer Programs: Block Moves & Exchange (With & Without Overlap) with &without String Instructions.
- 2. Arithmetic Operations: Addition, Multiplication & Division on 32-Bit Data.
- 3. a) Code Conversions: Use XLAT Instruction to Convert Binary to BCD, Input from Keyboard & Display Result on the Console.

- b) ASCII Operations: Addition, Subtraction, Multiplication
- 4. a) Search for a Key in an Array of Elements using Linear Search, Binary Search. Find Efficiency in each case.
 - b) Sort an Array Using Bubble Sort & Selection Sort. Find Efficiency in each case.

Interfacing experiments with 8051 C using Keil software

- 5. Illustrate the interfacing of LCD and LED with variant of 8051 Microcontroller using C language.
- 6. Implement the interfacing of stepper motor and DC Motor with variant of 8051 Microcontroller using C programming language.
- 7. Implement the interfacing of ADC with variant of 8051 Microcontroller using C language.
- 8. Write a C program to interface 4 x 4 keypad with variant of 8051 Microcontroller.
- 9. Write a C program to interface DAC and Elevator with variant of 8051 Microcontroller
- 10. Design 8051 based system to measure the frequency of TTL waveform. Design 8051 based system for automatic controlling of light.

Course	Course Outcomes: After completing the course, the students will be able to						
CO1	Interpret the architecture, instruction set, memory organization and addressing modes of the						
	microprocessors and microcontrollers.						
CO2	Analyze pin functions / ports for implementing peripheral interfaces with microprocessors						
	and microcontrollers.						
CO3	Apply the knowledge of microprocessor and microcontroller for implementing assembly						
	language/C programming.						
CO4	Engage in assignment to understand, formulate, design and analyze problems to be realized						
	on embedded processors.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of Quizzes (Q), Tests (T) and Experiential learning (EL). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for experiential learning is 20.

Total CIE is 30(Q)+50(T)+20(EL) = 100 Marks.

Scheme of Continuous Internal Evaluation (CIE); Practical Test for 50 Marks

The Laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average marks (AM) over number of weeks is considered for 30 marks. At the end of the semester a test (T) is conducted for 10 marks. The students are encouraged to implement additional innovative experiments (IE) in the lab and are rewarded for 10 marks. Total marks for the laboratory is 50.

Total CIE is 30(AM) + 10(T) + 10(IE) = 50 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part A and Part B. Part A consists of objective type questions for 20 marks covering the complete syllabus. Part B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Scheme of Semester End Examination (SEE); Practical Exam for 50 Marks

SEE for the practical courses will be based on experiment conduction with proper results, is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

Semester End Evaluation (SEE): Theory (100 Marks) + Practical (50 Marks) = Total 150 Marks

	time analog	y.	_							
4	Understand	the	computation of	of FFT algorithm in linear filtering & correlat	ions.					

Unit-I 8 Hrs

Introduction to Signals and System: Definition of Signals, Classification of Signals, Basic Operations on Signals: Operations Performed on the Independent and Dependent Variable, Precedence Rule, Elementary Signals. Definition of Systems, System Viewed as Interconnection of Operations, Properties of Systems.

Unit – II 8 Hrs

Time domain representations of Linear Time Invariant Systems: Convolution Sum, Convolution Sum Evaluation Procedure, Convolution Integrals, Convolution Integrals Evaluation Procedure, Interconnections of LTI System, Relations between LTI System Properties and the Impulse Response, step response, Difference Equation Representation of LTI System and Solving Difference Equations.

Unit –III 8 Hrs

Applications of Fourier Representations to Mixed Signal classes: Review of Fourier representation of signals, Introduction to DTFS and DTFT, Introduction, Fourier Transform Representations of periodic signals, Convolution and multiplication with Mixtures of periodic and Non-Periodic signals, Fourier Transform representation of discrete time signals, sampling Concept.

Unit –IV 8 Hrs

The Discrete Fourier transform - Its properties and Applications: Frequency domain Sampling and Reconstruction of Discrete time signals, DFT, DFT as a linear Transformation, Relationship of DFT to other transforms. Properties of DFT: Periodicity, Linearity and Symmetry properties, Multiplication of two DFTs and circular convolution, additional DFT properties. Linear filtering methods based on the DFT: Use of DFT in linear filtering, Filtering of long data sequences.

Unit –V 7 Hrs

Efficient computation of DFT - FFT Algorithms: Direct computation of DFT, Radix-2 FFT Algorithms and Implementation of FFT Algorithms, Applications of FFT algorithms, Efficient computation of DFT of two real sequences, Efficient computation of DFT of a 2N - point real sequence.

Course	Course Outcomes: After completing the course, the students will be able to							
CO1	Analyze the fundamental concepts of the both continuous and discrete signals and systems,							
	Representation of both periodic & aperiodic signals in frequency domain.							
CO2	Apply the properties of signals and analyze both continuous and discrete systems commonly							
	found in communication, signal processing and control systems.							
CO3	Analyze continuous & discrete systems both in time & frequency domain.							
CO4	Apply efficient methods/algorithms for the computation of frequency domain representation							
	& vice-versa.

	Semester: IV									
	OBJECT ORIENTED PROGRAMMING WITH C++									
	(Theory)									
Cou	Course Code : 18ET46 CIE : 100 Marks									
Credits: L:T:P		:	3:0:0		SEE	:	100 Marks			
Tot	al Hours	:	40L		SEE Duration		3.00 Hrs			
Cou	ırse Learnin	g Ol	bjectives: The	students will be able to						
1	To understa	nd l	now C++ impr	oves C with object-oriented fea	atures and to learn s	ynt	ax & semantics of			
	the C++ pro	ogra	mming langua	ge.						
2	To understa	nd t	he concept of	lata abstraction and encapsula	tion.					
3	To design C++ classes for code reuse.									
4	To analyze	the	usage of gener	c classes with C++ templates.						
5	To impleme	nt t	he use of excer	tion handling in C++ program	ns.					

UNIT-I 06Hrs

Principles of object oriented Programming: object oriented programming paradigm, Basic concepts of object-oriented programming, Benefits of OOP, Object oriented languages, Applications of OOP. **Beginning with C++, Tokens, Expressions and Control structures.** C++ Programming exercises and debugging exercises.

UNIT-II 10Hrs

Functions in C++: Function prototyping, call by reference, Return by reference, inline functions, default arguments, const arguments, recursion, function overloading, friend and virtual functions, math library functions.

Classes and Objects: class definitions, defining member functions, C++ programs with class, outside function inline, nesting of member functions, private member functions, Arrays in class, memory allocation, static data members, static member functions, Array of objects, objects as function arguments, Friendly functions, Returning objects, const member functions, Pointers to members, Local classes.

Constructors and Destructors: Constructors, parameterized constructors, Multiple constructors, default arguments, Dynamic initialization of objects, copy constructors, dynamic constructors, Constructing Two-dimensional arrays, Const objects, Destructors. C++ Programming exercises and debugging exercises.

UNIT-III 10 Hrs

Operator overloading and Type conversion: operator function and operator overloading, overloading unary and binary operators, overloading binary operators using friends, manipulation of strings using operators, Rules for operator overloading, Type conversions.

Inheritance: Extending classes: Derived classes, Types of inheritance (single, multilevel, multiple, hierarchical and hybrid), Virtual base classes, Abstract classes, Constructors in derived classes, nesting of classes

Pointers, Virtual functions and polymorphism: pointers, pointers to objects, this pointer, polymorphism, pointer to derived classes, virtual functions, pure virtual functions, virtual constructors and destructors.

C++ Programming exercises and debugging exercises.

UNIT-IV 06Hrs

Templates: class templates, multiple parameters in class templates, function templates, multiple parameters in function templates, overloading template functions, member function templates, Template arguments. **Exception Handling:** Basics of Exception handling, Exception types, Throwing and catching mechanism, rethrowing exceptions, exceptions in constructors and destructors, Exceptions in operator overloaded functions.

UNIT-V 08 Hrs

C++ Searching Algorithms: Linear search and binary search.

C++ Sorting Algorithms: Selection sort, bubble sort, insertion sort, Quick sort, merge sort and Radix sort. **Object oriented systems development:** Procedure oriented paradigms and development tools, object oriented paradigm and notations & graphs, Steps in object oriented analysis and design, Implementation, Prototyping paradigm.

Cours	Course Outcomes: After completing the course, the students will be able to							
CO1	Understand the concepts of Object Oriented programming.							
CO2	Analyze the working of Object Oriented programming.							
CO3	Design the generic method of C++ programming using templates.							
CO4	Apply the concepts of object-oriented programming in design and development of software systems.

Semester: IV										
Design Thinking Lab										
Cou	ourse Code : 18ET47 CIE : 50 Marks									
Cred	lits: L:T:P	:	0:0:2		SEE	:	50 Marks			
Hou	rs	:	26P		SEE Duration	:	02 Hours			
Cou	rse Learning C	bje	ectives: To ena	ble the students to:						
	Knowledge .	Ap_I	plication: Ac	quire the ability to mak	e links across	dif	ferent areas of			
1	knowledge a	nd	to generate, o	develop and evaluate idea	as and informati	ion	so as to apply			
	these skills to	o pi	rovide solution	ns of societal concern						
2	Communica	tior	: Acquire th	e skills to communicate	effectively and	l to	present ideas			
4	clearly and c	ohe	erently to a spe	ecific audience in both the	e written and ora	ıl f	orms.			
3	Collaboratio	Collaboration: Acquire collaborative skills through working in a team to achieve								
3	common goa	common goals.								
4	Independent	L	earning: Le	arn on their own, refle	ect on their le	ear	ning and take			
4	appropriate a	cti	on to improve	it.			-			

Guidelines for Design Thinking Lab:

- 1. The Design Thinking Lab (DTL) is to be carried out by a team of two-three students.
- 2. Each student in a team must contribute equally in the tasks mentioned below.
- 3. Each group has to select a theme that will provide solutions to the challenges of societal concern. Normally three to four themes would be identified by the by the department
- 4. Each group should follow the stages of Empathy, Design, Ideate, prototype and Test for completion of DTL.
- 5. After every stage of DTL, the committee constituted by the department along with the coordinators would evaluate for CIE. The committee shall consist of respective coordinator & two senior faculty members as examiners. The evaluation will be done for each student separately.
- 6. The team should prepare a Digital Poster and a report should be submitted after incorporation of any modifications suggested by the evaluation committee.

The Design Thinking lab tasks would involve:

- 1. Carry out the detailed questionnaire to arrive at the problem of the selected theme. The empathy report shall be prepared based on the response of the stake holders.
- 2. For the problem identified, the team needs to give solution through thinking out of the box innovatively to complete the ideation stage of DTL
- 3. Once the idea of the solution is ready, detailed design has to be formulated in the Design stage considering the practical feasibility.
- 4. If the Design of the problem is approved, the team should implement the design and come out with prototype of the system.
- 5. Conduct thorough testing of all the modules in the prototype developed and carry out integrated testing.
- 6. Demonstrate the functioning of the prototype along with presentations of the same.
- 7. Prepare a Digital poster indicating all the stages of DTL separately. A Detailed project report also should be submitted covering the difficulties and challenges faced in each stage of DTL.
- 8. Methods of testing and validation should be clearly defined both in the Digital poster as well as the report.

The students are required to submit the Poster and the report in the prescribed format provided by the department.

Course	Course Outcomes: After completing the course, the students will be able to							
CO 1:	: Interpreting and implementing the empathy, ideate and design should be implemented by							
	applying the concepts learnt.							
CO 2:	The course will facilitate effective participation by the student in team work and							
	development of communication and presentation skills essential for being part of any of							
	the domains in his / her future career.							
CO 3:	Appling project life cycle effectively to develop an efficient prototype.							
CO 4:	Produce students who would be equipped to pursue higher studies in a specialized area							
	or carry out research work in an industrial environment.							

Scheme of Evaluation for CIE Marks:

Evaluation will be carried out in three phases:

Phase	Activity	Weightage
I	Empathy, Ideate evaluation	10M
II	Design evaluation	15M
III	Prototype evaluation, Digital Poster presentation and report submission	25M
	Total	50M

Scheme of Evaluation for SEE Marks:

Sl. No.	Evaluation Component	Marks					
1.	Written presentation of synopsis: Write up						
2.	Presentation/Demonstration of the project	15M					
3.	Demonstration of the project	20M					
4.	Viva	05M					
5.	Report	05M					
	Total	50M

Cour	se Code	:	18DCS48		CIE Marks	:	50		
Credits: L:T:P		:	2:0:0		SEE Marks	:	50		
	Au	dit Co	urse		SEE Duration	:	2.00 Hours		
Cour	se Learning	g Obje	ctives: The students	s will be able to					
1.	1. Develop arithmetic reasoning and analytical skills to apply knowledge of basic concepts of programming in C.								
2.	Learn basic principles of problem solving through programming.								
3.	Write C programs using appropriate programming constructs adopted in programming.								
4.	Solve con	Solve complex problems using C programming.							

Unit – I 4Hrs

Introduction to Reasoning, Algorithms and Flowcharts: Skill development – Examples related to Arithmetical Reasoning and Analytical Reasoning. Fundamentals of algorithms and flowcharts Introduction to C programming: Basic structure of C program, Features of C language, Character set, C tokens, Keywords and Identifiers, Constants, Variables, Data types.

Unit – II 4Hrs

Handling Input and Output Operations: Formatted input/output functions, Unformatted input/output functions with programming examples using different input/output functions.

Operators and Expressions: Arithmetic operators, Relational operators, Logical Operators, Assignment operators, Increment and decrement operators, Conditional operators, Bit-wise operators, Arithmetic expressions. Evaluation of expressions, Precedence of arithmetic operators, Type conversion in expressions, Operator precedence and associativity.

Unit – III 6Hrs

Programming Constructs

Decision Making and Branching: Decision making with 'if' statement, Simple 'if' statement, the 'if...else' statement, nesting of 'if...else' statements, The 'else if' ladder, The 'switch' statement, The '?:' operator, The 'goto' statement.

Decision making and looping: The while statement, The do while statement, The 'for' statement, Jumps in loops.

Unit – IV 6Hrs

Arrays: One dimensional arrays, Declaration of one dimensional arrays. Initialization of one dimensional arrays, Two dimensional arrays, Initializing two dimensional arrays.

Character Arrays and Strings: Declaring and Initializing String Variables, Reading Strings from Terminal, Writing strings to screen, String handling functions.

Unit – V 8Hrs

User-defined functions: Need for User Defined Functions, Definition of functions, Return values and their types, Function calls, Function declaration. Examples.

Introduction to Pointers: Introduction, Declaration and initialization of pointers. Examples **Structures and Unions:** Introduction, Structure and union definition, Declaring structure and union variables, Accessing structure members. Example programs.

PRACTICE PROGRAMS 1. Familiarization with programming environment, concept of naming the program files, storing, compilation, execution and debugging. Taking any simple C- code.(Example programs having the delimeters, format specifiers in printf and scanf) 2. Debug the errors and understand the working of input statements in a program by compiling the C-code. 3. Implement C Program to demonstrate the working of operators and analyze the output.

4.	Simple computational problems using arithmetic expressions and use of each
	operator (+,-,/,%) leading to implementation of a Commercial calculator with
	appropriate message:
	a)Read the values from the keyboard
	b) Perform all the arithmetic operations.
	c) Handle the errors and print appropriate message.
5.	Write a C program to find and output all the roots if a given quadratic equation, for
5.	
	non-zero coefficients. (Using ifelse statement).
6a.	Write a C program to print out a multiplication table for a given NxN and also to print the
	sum table using skip count 'n' values for a given upper bound.
6b.	Write a C program to generate the patterns using for loops.
00.	Example: (to print * if it is even number)
	1
	**
	333

	55555
7a.	Write a C program to find the Greatest common divisor(GCD)and Least common multiplier
	(LCM).
7b.	Write a C program to input a number and check whether the number is palindrome or not.
8.	Develop a C program for one dimensional, demonstrate a C program that reads N integer
	numbers and arrange them in ascending or descending order using bubble sort technique.
9.	Develop and demonstrate a C program for Matrix multiplication:
	a) Read the sizes of two matrices and check the compatibility for multiplication.
	b) Print the appropriate message if the condition is not satisfied and ask user to re-enter
	the size of matrix.
	c) Read the input matrix
	d) Perform matrix multiplication and print the result along with the input matrix.
10.	Using functions develop a C program to perform the following tasks by parameter passing
10.	concept:
	a) To read a string from the user
	Print appropriate message for palindrome or not palindrome
110	Write a C program to find the length of the string without using library function.
11a. 11b.	
	Write a program to enter a sentence and print total number of vowels. Design a structure 'Complex' and write a C program to perform the following operations:
12.	
	i. Reading a complex number.
	ii. Addition of two complex numbers.
12	iii. Print the result
13.	Create a structure called student with the following members student name, rollno, and a
	structure with marks details in three tests. Write a C program to create N records and
	a) Search on roll no and display all the records.
	b) Average marks in each test.
	c) Highest marks in each test

Course	Course Outcomes: After Completing the course, the students will be able to							
CO 1:	Understand and explore the fundamental computer concepts and basic programming principles like data types, input/output functions, operators, programming constructs and user defined functions.							
CO 2:	Analyze and Develop algorithmic solutions to problems.							
CO 3:	Implement and Demonstrate capabilities of writing 'C' programs in optimized, robust and reusable code.							
CO 4:	Apply appropriate concepts of data structures like arrays, structures implement programs for various applications

Continuous Internal Evaluation (CIE); Theory (50 Marks)

CIE is executed by way of quizzes (Q), Tests (T) and lab practice (P). A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks the sum of the marks scored from quizzes would be reduced to 10 marks. The two tests are conducted for 30 marks each and the sum of the marks scored from two tests is reduced to 30. The programs practiced would be assessed for 10 marks (Execution and Documentation).

Total CIE is 10(Q) + 30(T) + 10(P) = 50 Marks.

Semester End Evaluation (SEE); Theory (50 Marks)

SEE for 50 marksis executed by means of an examination. The Question paper for the course consists of five main questions, one from each unit for 10 marks adding up to 50 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

High-3: Medium-2: Low-1

	Semester: IV								
	PROFESSIONAL PRACTICE – I								
			COMMUN	NICATION SKIL	LS				
			(Common	to all Programm	es)				
Cou	rse Code	:	18HS49		CIE	:	50		
Credits: L:T:P		:	0:0:1		SEE		50		
Tota	l Hours	:	18 hrs /Semester		SEE Duration	:	2 Hours		
Cou	rse Learning O	bje	ectives: The students w	vill be able to					
1	Understand th	eir	own communication s	style, the essentials	of good communic	atio	n and develop		
	their confidence to communicate effectively.								
2	2 Manage stress by applying stress management skills.								
3	3 Ability to give contribution to the planning and coordinate Team work.								
4	4 Ability to make problem solving decisions related to ethics.								

III Semester

6 Hrs

Communication Skills: Basics, Method, Means, Process and Purpose, Basics of Business Communication, Written & Oral Communication, Listening.

Communication with Confidence & Clarity- Interaction with people, the need the uses and the methods, Getting phonetically correct, using politically correct language, Debate & Extempore.

6 Hrs

Assertive Communication- Concept of Assertive communication, Importance and applicability of Assertive communication, Assertive Words, being assertive.

Presentation Skills- Discussing the basic concepts of presentation skills, Articulation Skills, IQ & GK, How to make effective presentations, body language & Dress code in presentation, media of presentation.

6 Hrs

Team Work- Team Work and its important elements Clarifying the advantages and challenges of team work Understanding bargains in team building Defining behaviour to sync with team work Stages of Team Building Features of successful teams.

IV Semester

Body Language & Proxemics - Rapport Building - Gestures, postures, facial expression and body movements in different situations, Importance of Proxemics, Right personal space to maintain with different people.

6Hrs

Motivation and Stress Management: Self-motivation, group motivation, leadership abilities, Stress clauses and stress busters to handle stress and de-stress; Understanding stress - Concept of sound body and mind, Dealing with anxiety, tension, and relaxation techniques. Individual Counseling & Guidance, Career Orientation. Balancing Personal & Professional Life-

6 Hrs

Professional Practice - Professional Dress Code, Time Sense, Respecting People & their Space, Relevant Behaviour at different Hierarchical Levels. Positive Attitude, Self Analysis and Self-Management.

Professional Ethics - values to be practiced, standards and codes to be adopted as professional engineers in the society for various projects. Balancing Personal & Professional Life

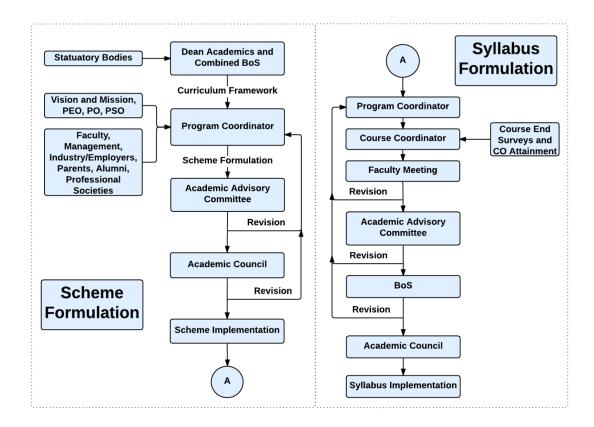

Course	Course Outcomes: After completing the course, the students will be able to							
CO1	Inculcate skills for life, such as problem solving, decision making, stress management.							
CO2	Develop leadership and interpersonal working skills and professional ethics.							
CO3	Apply verbal communication skills with appropriate body language.							
CO4	Develop their potential and become self-confident to acquire a high degree.							

Refe	erence Books
1.	The 7 Habits of Highly Effective People, Stephen R Covey, Free Press, 2004 Edition, ISBN:
	0743272455.
2.	How to win friends and influence people, Dale Carnegie, General Press, 1 st Edition, 2016, ISBN: 9789380914787.
3.	Crucial Conversation: Tools for Talking When Stakes are High, Kerry Patterson, Joseph Grenny,
	Ron Mcmillan, McGraw-Hill Publication, 2012 Edition, ISBN: 9780071772204.
4.	Aptimithra: Best Aptitude Book, Ethnus, Tata McGraw Hill, 2014 Edition, ISBN: 9781259058738.

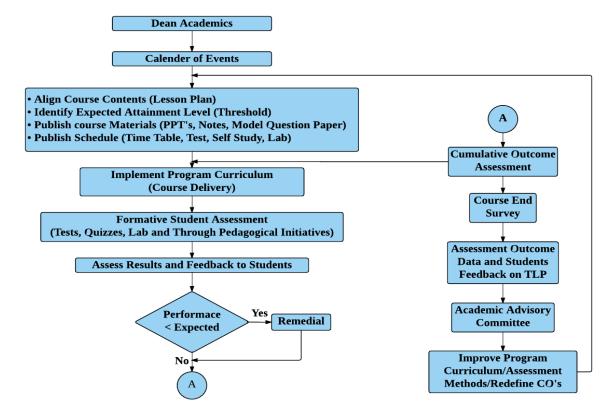

Scheme of Continuous Internal Examination and Semester End Examination

Phase	Activity	Weightage
Phase I	CIE will be conducted during the 3 rd semester and evaluated for 50 marks.	50%
III Sem	The test will have two components. The Quiz is evaluated for 15 marks and	
	second component consisting of questions requiring descriptive answers is	
	evaluated for 35 marks. The test & quiz will assess the skills acquired	
	through the training module.	
	SEE is based on the test conducted at the end of the 3 rd semester The test	
	will have two components a Quiz evaluated for 15 marks and second	
	component consisting of questions requiring descriptive answers is	
	evaluated for 35 marks.	
Phase II	During the 4 th semester a test will be conducted and evaluated for 50 marks.	50%
IV Sem	The test will have two components a Short Quiz and Questions requiring	
	descriptive answers. The test & quiz will assess the skills acquired through	
	the training module.	
	SEE is based on the test conducted at the end of the 4 th semester The test	
	will have two components. The Quiz evaluated for 15 marks and second	
	component consisting of questions requiring descriptive answers is	
	evaluated for 35 marks	
Phase III	At the end of the IV Sem Marks of CIE (3 rd Sem and 4 th Sem) is consolidated	for 50 marks
At the	(Average of Test1 and Test 2 (CIE 1+CIE2)/2.	
end of IV	At the end of the IV Sem Marks of SEE (3 rd Sem and 4 th Sem) is consolidated	for 50 marks
Sem	(Average of CIE 1 and CIE 2 (CIE 1+CIE2)/2.	

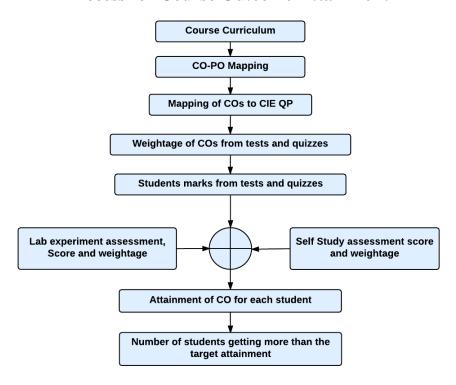

Curriculum Design Process

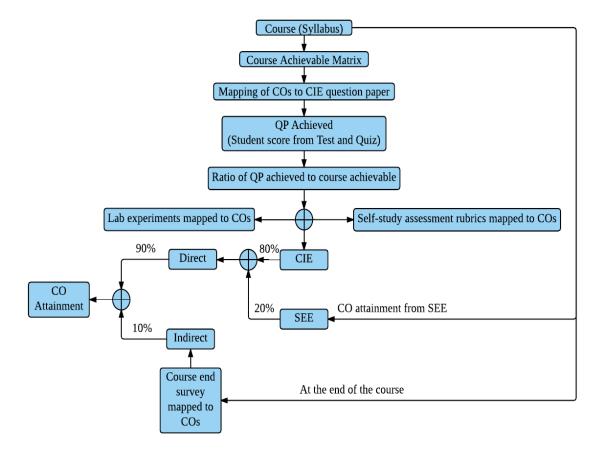

Academic Planning and Implementation

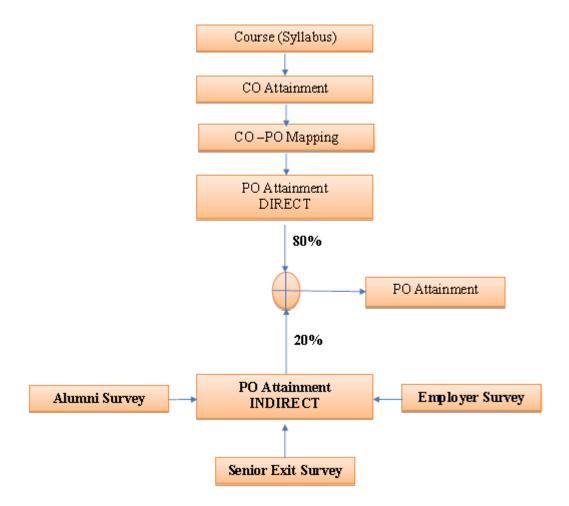

Process for Course Outcome Attainment

Final CO Attainment Process

Program Outcome Attainment Process

PROGRAM OUTCOMES (POs)

- 1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation for the solution of complex engineering problems.
- 2. **Problem analysis:** Identify, formulate, research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- 3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety, and cultural, societal, and environmental considerations.
- 4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- 5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modelling to complex engineering activities, with an understanding of the limitations.
- 6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- 7. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- 8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- 9. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- 10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with the society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- 11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- 12. **Life-long learning:** Recognise the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
