

RV COLLEGE OF ENGINEERING[®]

(Autonomous Institution Affiliated to VTU, Belagavi) R.V. Vidyaniketan Post, Mysore Road Bengaluru – 560 059

Bachelor of Engineering (B.E.) Scheme and Syllabus of V& VI Semesters

2018 SCHEME

TELECOMMUNICATION ENGINEERING

VISION

Leadership in Quality Technical Education, Interdisciplinary Research & Innovation, with a Focus on Sustainable and Inclusive Technology

MISSION

- 1. To deliver outcome based Quality education, emphasizing on experiential learning with the state of the art infrastructure.
- 2. To create a conducive environment for interdisciplinary research and innovation.
- 3. To develop professionals through holistic education focusing on individual growth, discipline, integrity, ethics and social sensitivity.
- 4. To nurture industry-institution collaboration leading to competency enhancement and entrepreneurship.
- 5. To focus on technologies that are sustainable and inclusive, benefiting all sections of the society.

QUALITY POLICY

Achieving Excellence in Technical Education, Research and Consulting through an Outcome Based Curriculum focusing on Continuous Improvement and Innovation by Benchmarking against the global Best Practices.

CORE VALUES

Professionalism, Commitment, Integrity, Team Work, Innovation

RV COLLEGE OF ENGINEERING[®] (Autonomous Institution Affiliated to VTU, Belagavi) R.V. Vidyaniketan Post, Mysore Road Bengaluru – 560 059

Bachelor of Engineering (B.E.) Scheme and Syllabus of V & VI Semesters

2018 SCHEME

DEPARTMENT OF TELECOMMUNICATION ENGINEERING

Department Vision

Imparting quality education in Electronics and Telecommunication Engineering through focus on fundamentals, research and innovation for sustainable development

Department Mission

- Provide comprehensive education that prepares students to contribute effectively to the profession and society in the field of Telecommunication.
- Create state-of-the-art infrastructure to integrate a culture of research with a focus on Telecommunication Engineering Education
- Encourage students to be innovators to meet local and global needs with ethical practice
- Create an environment for faculty to carry out research and contribute in their field of specialization, leading to Centre of Excellence with focus on affordable innovation.
- Establish a strong and wide base linkage with industries, R&D organization and academic Institutions.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

| PEO | Description |
|------|--|
| PEO1 | Acquire appropriate knowledge of the fundamentals of basic sciences, mathematics, |
| | engineering sciences, Electronics & Telecommunication engineering so as to adapt to |
| | rapidly changing technology |
| PEO2 | Think critically to analyze, evaluate, design and solve complex technical and managerial |
| | problems through research and innovation. |
| PEO3 | Function and communicate effectively demonstrating team spirit, ethics, respectful and |
| | professional behavior. |
| PEO4 | To face challenges through lifelong learning for global acceptance. |

PROGRAM SPECIFIC OUTCOMES (PSOs)

| PSO | Description |
|------|--|
| PSO1 | Analyze, design and implement emerging Telecommunications systems using devices, sub- |
| | systems, propagation models, networking of Wireless and Wire line communication systems. |
| PSO2 | Exhibit Technical skills necessary to choose careers in the design, installation, testing, |
| | management and operation of Telecommunication systems. |

Lead Society: Institute of Electrical and Electronics Engineers (IEEE)

Managing Risks and Learning from Failures: - Identify risk-taking and resilience traits. Understand that risk-taking is a positive trait. Learn to cultivate risk-taking traits. (Practical Application) Appreciate the role of failure on the road to success, and understand when to give up. Learn about some entrepreneurs/risk-takers. (Practical Application).

Are You Ready to be an Entrepreneur: - Let's ask "WHY" Give participants a real picture of the benefits and challenges of being an entrepreneur. Identify the reasons why people want to become entrepreneurs. Help participants identify why they would want to become entrepreneurs.

| Cours | se Outcomes: After completing the course, the students will be able to |
|------------|---|
| CO1 | Comprehend the applicable source, scope and limitations of Intellectual Property within the |
| | purview of engineering domain. |
| CO2 | Knowledge and competence related exposure to the various Legal issues pertaining to |
| | Intellectual Property Rights with the utility in engineering perspectives. |
| CO3 | Enable the students to have a direct experience of venture creation through a facilitated |
| | learning environment. |
| CO4 | It allows students to learn and apply the latest methodology, frameworks and tools that |
| | entrepreneurs use to succeed in real life. |

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20. 50% weightage should be given to case studies. Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level. **50% weightage should be given to case studies.**

LABORATORY EXPERIMENTS

Part A

The students are expected to simulate the following circuits/systems using LabVIEW or MATLAB tool.

- 1. Digital Modulation Scheme BPSK & QPSK generation and detection.
- 2. Quadrature Amplitude modulation generation and detection.
- 3. Spread Spectrum systems DSSS and FHSS.
- 4. Huffman Coding
- 5. Convolution Coding
- 6. Linear block code
- 7. To generate ASK/ FSK using Lab view / Matlab Simulink.

Part B

The students are expected to implement the following circuits on hardware.

- 1. Time Division Multiplexing.
- 2. Generation and Detection of ASK, FSK and BPSK signals.
- 3. Generation and Detection of Quadrature Phase Shift Keying & Differential Phase shift keying
- 4. Spread Spectrum -FHSS generation and Detection

| Course | Outcomes: After completing the course, the students will be able to |
|--------|---|
| CO1 | Explain basic principles of digital modulation techniques, Source coding and channel coding |
| | schemes and theorem. |
| CO2 | Analyze & design various modulation and demodulation circuits and wide band modulation |
| | techniques with and without noise. |
| CO3 | Apply Probability Theory, Random Variables, Random process knowledge in formulating |
| | and solving mathematical model for digital Communication system and Information Theory. |
| CO4 | Implement, Demonstrate and Evaluate the performance parameters of different digital |
| | communication circuits, Channel coder, Source Coder and wide band modulation techniques. |

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20.

Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Scheme of Continuous Internal Evaluation (CIE); Practical Test for 50 Marks

The Laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average marks (AM) over number of weeks is considered for 30 marks. At the end of the semester a test (T) is conducted for 10 marks. The students are encouraged to implement additional innovative experiments (IE) in the lab and are rewarded for 10 marks. Total marks for the laboratory is 50.

Total CIE is 30(AM) +10 (T) +10 (IE) =50 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Scheme of Semester End Examination (SEE); Practical Exam for 50 Marks

SEE for the practical courses will be based on experiment conduction with proper results, is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

Semester End Evaluation (SEE): Theory (100 Marks) + Practical (50 Marks) = Total 150 Marks

Laboratory Experiments Part – A

Simulation using MATLAB/SCILAB tool:

- 1) Computation of Circular, Linear Convolution, Correlation.
- 2) Study of multi rate operations.
- 3) Computation of DFT, IDFT.
- 4) Computation of Response of discrete-time systems.
- 5) Design of digital filters and study of response in time domain and frequency domain.

Part – B

Simulation using DSP hardware:

- 1) Implementation of various operations: DFT, Convolution and Correlation.
- 2) Design and implementation of various digital filters.

Connecting Input Devices:Switches, Keyboard an devices: LEDs, Seven Segment Displays(SSD). Assignment: MCQ/MSQ | ethods for |
| Unit – III | 9 Hrs |
| Advanced Physical Interfacing: Driving load - high side, low side and H-bridge. Multiplexin including Charlieplexing. Shaft encoder. Programming the MSP430. Basics of version control system - Git. Installing and us Composer Studio(CCS). Introduction to Embedded C. Interfacing LEDs and Switches with using Digital Input and Output. MSP430 Clock and Reset System. MSP430 Clock so distribution. Types of Reset sources. Handling Interrupts in MSP430. Writing efficient | sing Code n MSP430 urces and |
| Unit – IV | 7 Hrs |
| Interfacing Seven Segment Displays and Liquid Crystal Displays with MSP430. Low Pow in MSP430. Introduction to MSP430 Timer Module and it's Modes of Operation. Generating Pulse Width Modulation (PWM) using Timer Capture Mode. ADC operation in Interfacing analog inputs. Generating random numbers using LFSR and other methods. Add to MSP430. Custom Waveform generation using MSP430. | MSP430. |
| Unit – V | 8 Hrs |
| Timer Capture Modes. Measuring frequency and time period of external signals and eve Communication Protocols: UART, SPI, I2C. Interfacing Universal Serial Communication (USCI) Module of the MSP430 for UART Communication. Advanced Coding Exercises Interrupt driven Programming. Building an Electronics Project. Circuit Prototyping techniques. Designing Single Purpose Computers using Finite State Mac Datapath (FSMD) approach. MSP430 Based Project Design and Implementation. Recap Coverage. | Interface based on chine with |

| Cours | e Outcomes: After completing the course, the students will be able to |
|-------|--|
| CO1 | Identify the concepts of system components to assemble small embedded systems. |
| CO2 | Analyze the synchronization of system components in embedded systems. |
| CO3 | Apply firmware Design and development tools for designing Embedded System. |
| CO4 | Apply the key concepts of Real-Time Operating Systems in Embedded system design. |

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20.

Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20.

Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20.

Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

UNIT-I

Fundamentals of Automotive: Evolution and Use of Electronics in Automotive, Automotive Systems, The Engine, Engine Control, Internal Combustion Engines, Spark Ignition Engines and Alternative Engines. Ignition System, Ignition Timing, Drivetrain, Suspensions, Brakes and Steering Systems. **Basics of electronic engine control:** Motivation for Electronic Engine Control, Concept of an Electronic Engine control system, Definition of General terms, Definition of Engine performance terms, Engine mapping, Effect of Air/Fuel ratio, spark timing and EGR on performance, Control Strategy, Electronic Fuel control system, Analysis of intake manifold pressure, Electronic Ignition.

08 Hrs

07 Hrs

08 Hrs

Automotive Sensors and Actuators:

Automotive Control System Applications of Sensors and Actuators,

Sensors: Air Flow Sensor, Engine Crankshaft Angular Position Sensor, Throttle Angle Sensor, Temperature Sensor, Sensors for Feedback Control, Sensors for Driver Assistance System: Radar, Lidar, Video Technology.

Actuators: Solenoids, Piezo Electric Force Generators, Fluid mechanical Actuators, Electric Motors and Switches.

UNIT-III

UNIT-II

Digital Engine Control Systems: Digital Engine control features, Control modes for fuel Control (Seven Modes), EGR Control, Electronic Ignition Control - Closed Loop Ignition timing, Spark Advance Correction Scheme, Integrated Engine Control System.

Vehicle Motion Control: Typical Cruise Control System, Digital Cruise Control System, Digital Speed Sensor, Throttle Actuator, Digital Cruise Control configuration, Cruise Control Electronics (Digital only), Antilock Brake System (ABS), Electronic Suspension System, Electronic Steering Control.

| UNIT-IV | 08 Hrs |
|--|---------------|
| Automotive Communication Systems: | |
| Automotive networking: Bus systems, Technical principles, network topology. Buses in motor | vehicles: |
| CAN, Flex Ray, LIN, Ethernet, IP, PSI5, MOST, D2B and DSI. | |

Automotive Embedded Software Development

Fundamentals of Software and software development lifecycles. Overview of AUTOSAR methodology and principles of AUTOSAR Architecture.

Diagnostics and Safety in Automotive:

Timing Light, Engine Analyzer, Electronic Control System Diagnostics: Onboard diagnostics, Off-board diagnostics, Expert Systems, Occupant Protection Systems – Accelerometer based Air Bag systems, Case study on ON-BOARD, OFF-BOARD diagnostics.

Advances in Automotive Electronic Systems: Alternative Fuel Engines, Electric and Hybrid vehicles, Fuel cell powered cars, Collision Avoidance Radar warning Systems, Navigation: Navigation Sensors, Radio Navigation, dead reckoning navigation, Video based driver assistance systems, Night vision Systems.

| Course | Outcomes: After completing the course, the students will be able to |
|--------|---|
| CO1: | Acquire the knowledge of automotive domain fundamentals, need of Electronics and |
| | communication interfaces in Automotive systems. |
| CO2: | Apply various types of sensors, actuators and Motion Control techniques in Automotive |
| | systems |
| CO3: | Analyze digital engine control systems and Embedded Software's and ECU's used in |
| | automotive systems. |
| CO4: | Illustrate the concepts of Diagnostics, safety and advances in Automotive electronic Systems. |

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20. **Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.**

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks are executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20.

Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

transport devices, Single-electron transistors, Optical properties of Quantum Wells and Superlattices, Quantum Dots and Nano crystals. Quantum confined Stark effect, Stark ladders, Bloch oscillations. Spintronics, transport of spin, spin valve, Giant Maneto-resistance, Spin Injection (Johnson-Silsbee experiments).

| Course | e Outcomes: After completing the course, the students will be able to |
|--------------|--|
| CO1: | After successful completion of the course the student will be able to identify the different domains |
| | of application of the concepts of Quantum mechanics in Nano structures, super-lattices and |
| | Photonics. |
| CO2: | The student will gain knowledge to understand the crucial physics layers and principles that are at |
| | the core of nano and meso technology. |
| CO3: | The student will be able to apply the concepts to solve problems (quantitative and qualitative) |
| CO4 : | The student can apply the concepts in an interdisciplinary manner and can create new ideas and |
| | products related to appliances and sensors, that use the said concepts. |

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and Experiential Learning (EL). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for experiential learning is 20.

Total CIE is 30(Q) + 50(T) + 20(EL) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Thin Film Applications:

Band gap Engineering through thin films for electrical and optical applications. Thin Film for energy applications - coating on solar cells, fuel cells, batteries and super capacitors. Thin film thermo electric materials for thermal sensor applications. Thin film coating as protective coating for optical surfaces and as anti-reflection. Thin Film drug delivery and antibacterial surfaces - opportunities and challenges

07 Hrs

Ellipsometry, Raman Spectroscopy. Dielectric and Mechanical properties characterization.

Unit –V

| Course | e Outcomes: After completing the course, the students will be able to |
|--------|--|
| CO1: | Understand the basic mechanism of surface modification and thin film growth. |
| CO2: | Attain strong hold on thin film preparation by various techniques and their characterization |
| | methods. |
| CO3: | Apply the knowledge to select the most potential methods to produce thin films for wanted |
| | applications. |
| CO4: | Detailed knowledge of thin film selection for various applications. |

CIE is executed by way of quizzes (Q), tests (T) and Experiential Learning (EL). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for experiential learning is 20.

Total CIE is 30(Q) +50(T) +20(EL) =100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20.

Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20.

Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

| 4. Illustrate concept of money and its importance in evaluating the projects. | | | | | | | | |

| Unit – I | 07 Hrs |
|---|------------|
| Introduction: Principles of Engineering Economy, Engineering Decision- Makers, Engineering | ering and |
| Economics, Problem solving and Decision making, Intuition and Analysis, Tactics and Strategy. | |
| Interest and Interest Factors: Interest rate, Simple interest, Compound interest, Cash- flow | diagrams, |
| Exercises and Discussion. | |
| Unit – II | 07 Hrs |
| Present worth comparison : Conditions for present worth comparisons, Basic Present worth com | nparisons, |
| Present worth equivalence, Net Present worth, Assets with unequal lives, infinite lives, Futu | re worth |
| comparison, Pay – back comparison, Exercises, Discussions and problems. | |
| Unit – III | 07 Hrs |
| Equivalent annual worth comparisons: Equivalent Annual Worth Comparison methods, Situ | ations for |
| Equivalent Annual Worth Comparison Consideration of asset life, Comparison of assets with | equal and |
| unequal lives, Use of sinking fund method, Exercises, Problems. | |
| Rate of return calculations: Rate of return, Minimum acceptable rate of return, IRR, IRR miscon | nceptions, |
| Problems. | |
| Unit – IV | 06 Hrs |
| Replacement Analysis: Replacement studies, replacement due to deterioration, obsolescence, in | adequacy, |
| economic life for cyclic replacements, Exercises, Problems. | |
| Break- Even Analysis: Basic concepts, Linear Break- Even analysis, Exercises, Problems. | |
| Unit – V | 06 Hrs |
| Depreciation: Causes of Depreciation, Basic methods of computing depreciation charges, I | Exercises, |
| Problems. | |
| Effects of inflation: Causes, consequences and control of inflation, inflation in economic analysis | 8. |
| | |
| Course Outcomes: After going through this course the student will be able to | |
| CO 1: Explain the time value of money, and how to sketch the cash flow diagram | |

| | 1 |
|-------|---|
| CO 2: | Compare the alternatives using different compound interest factors, Select a feasible alternative |
| | based on the analysis. |
| CO 3: | Formulate a given problem for decision making |

| CO 4: | Evaluate alternatives and develop capital budget for different scenarios |
|-------|--|
| | Drandate anternatives and develop capital badget for anterent section |

Laboratory Experiments

Students are expected to implement the following circuits on Microwave Benches

- 1. Characterization of Reflex Klystron, Gunn diode sources
- 2. Characterization of Directional Coupler, Tee junctions, Circulator and Isolator,
- 3. Horn antenna, Parabolic Dish, Micro strip antennas,
- 4. Microstrip Passive components

The students are expected to simulate the following Antennas using RF CAD tools

- 1. Radiation characteristics of Dipole antenna,
- 2. N- isotropic point source array
- 3. Rectangular Microstrip patch antenna

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20.

Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Scheme of Continuous Internal Evaluation (CIE); Practical Test for 50 Marks

The Laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average marks (AM) over number of weeks is considered for 30 marks. At the end of the semester a test (T) is conducted for 10 marks. The students are encouraged to implement additional innovative experiments (IE) in the lab and are rewarded for 10 marks. Total marks for the laboratory is 50.

Total CIE is 30(AM) +10 (T) +10 (IE) =50 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Scheme of Semester End Examination (SEE); Practical Exam for 50 Marks

SEE for the practical courses will be based on experiment conduction with proper results, is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

Semester End Evaluation (SEE): Theory (100 Marks) + Practical (50 Marks) = Total 150 Marks

Telecommunication Engineering

Transport-Layer Protocols: Introduction: Services, Port Numbers. User Datagram Protocol: User Datagram, UDP Services, UDP Applications. Transmission Control Protocol: TCP Services, TCP Features, Segment A TCP Connection, Windows in TCP, Flow Control, Error Control, TCP Congestion Control, TCP Timers.

| LABORATORY EXPERIMENTS | | | | |
|--|--|--|--|--|
| Part- A | | | | |
| Experiments Using Routers and Switches: Configuration of Cisco router, IP static | | | | |
| routing and RIP using Cisco router, and VLAN using Cisco switch. | | | | |
| Part- B | | | | |
| Experiments Using Qualnet: Experiments on PPP, IEEE 802.3 and IEEE 802.11, RIP | | | | |
| and OSPF protocols for wired networks. | | | | |
| Part-C | | | | |
| Programs based on implementation of various algorithm using C/C++. | | | | |
| 1. Program for error detecting code using CRC-CCITT (16-bits). | | | | |
| 2. Shortest Path algorithm to find suitable path for transmission. | | | | |
| 3. Spanning Tree algorithm to find loop less path. | | | | |
| 4. Implement a client and server communication using sockets programming. | | | | |
| 5. Message queues of FIFOs as IPC Channel. | | | | |
| 6. Implement a simple multicast routing mechanism. | | | | |
| 7. Computation of Linear Block code using C++ Program. | | | | |
| 8. Implementation of congestion control algorithm. | | | | |

| Cours | e Outcomes: After completing the course, the students will be able to : |
|-------------|---|
| CO1 | Explain the principles of computer network and layered model of networking. |
| CO2 | Apply the algorithms/techniques of routing, congestion and Quality of Service to solve problems related to Computer Networks. |
| CO3 | Design and Implement protocols and algorithms for TCP/IP model. |
| CO4 | Evaluate and compare various algorithms/protocols available to address networking issues. |

Guidelines for Minor Project

- 1. The minor project is to be carried out individually or by a team of two-three students.
- 2. Each student in a team must contribute equally in the tasks mentioned below.
- 3. Each group has to select a current topic that will use the technical knowledge of their program of study after intensive literature survey.
- 4. The project should result in system/module which can be demonstrated, using the available resources in the college.
- 5. The CIE evaluation will be done by the committee constituted by the department. The committee shall consist of respective guide & two senior faculty members as examiners. The evaluation will be done for each student separately.
- 6. The final copy of the report should be submitted after incorporation of any modifications suggested by the evaluation committee.

The minor-project tasks would involve:

- 1. Carry out the Literature Survey of the topic chosen.
- 2. Understand the requirements specification of the minor-project.
- 3. Detail the design concepts as applicable through appropriate functional block diagrams.
- 4. Commence implementation of the methodology after approval by the faculty.
- 5. Conduct thorough testing of all the modules developed and carry out integrated testing.
- 6. Demonstrate the functioning of the minor project along with presentations of the same.
- 7. Prepare a project report covering all the above phases with proper inference to the results obtained.
- 8. Conclusion and Future Enhancements must also be included in the report.

The students are required to submit the report in the prescribed format provided by the department.

| Course | Course Outcomes: After completing the course, the students will be able to | | | | | | | |
|--------|---|--|--|--|--|--|--|--|
| CO 1: | Interpreting and implementing the project in the chosen domain by applying the concepts | | | | | | | |
| | learnt. | | | | | | | |
| CO 2: | The course will facilitate effective participation by the student in team work and | | | | | | | |
| | development of communication and presentation skills essential for being part of any of the | | | | | | | |
| | domains in his / her future career. | | | | | | | |
| CO 3: | Appling project life cycle effectively to develop an efficient product. | | | | | | | |
| CO 4: | Produce students who would be equipped to pursue higher studies in a specialized area or | | | | | | | |
| | carry out research work in an industrial environment. | | | | | | | |

Scheme of Evaluation for CIE Marks:

Evaluation will be carried out in three phases:

| Phase | Activity | Weightage |
|-------|--|------------|
| Ι | Synopsis submission, approval of the selected topic, Problem definition, Literature review, formulation of objectives, methodology | 10M |
| II | Mid-term evaluation to review the progress of implementation, design, testing and result analysis along with documentation | 15M |
| III | Submission of report, Final presentation and demonstration | 25M |
| | Total | 50M |

Scheme of Evaluation for SEE Marks:

| Sl. No. | Evaluation Component | Marks |
|------------|---|-------|
| 1. | Written presentation of synopsis: Write up | 5M |
| 2. | Presentation/Demonstration of the project | 15M |
| 3. | Demonstration of the project | 20M |
| 4. | Viva | 05M |
| 5. | Report | 05M |
| | Total | 50M |

| Unit –V | 8 Hrs |
| Morphological Image Processing: Preliminaries, Dilation and Erosion, Opening a | nd Closing, |
| The Hit-or-Miss Transformation, Some Basic Morphological Algorithms. | |
| Image Segmentation: Detection of Discontinuities, Edge Linking and Boundary | Detection, |
| Thresholding, Region-Based Segmentation. | |
| | |
| Course outcomes: On completion of the course, the student should have acquired the abil | ity to |
| CO1 Understand digital image processing fundamentals and its applications. | |
| CO2 Apply image processing techniques in both spatial and frequency domains. | |
| | |

| CO3 | Analyze | and | apply | different | operations | on an image | e for various | applications. | |
|-----|---------|-----|-------|-----------|------------|-------------|---------------|---------------|--|
| | | | | | | | | | |

CO4 Apply and justify the use of image processing in modern multimedia communication, society and Technology.

3 Digital Signal Processing – Fundamentals and Applications, Li Tan, 2008, Elsevier.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20.

Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20.

Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marksis executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and experiential learning (EL). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for experiential learning is 20. **Total CIE is 30(Q) + 50(T) + 20(EL) = 100 Marks**.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover the entire unit having the same complexity in terms of COs and Bloom's taxonomy level.

| Cou | rse Learning | Obj | ectives: The students will | be able to | | |
| 1 | Explain the t | ypes | and application of wearab | le sensor. | | |
| 2 | Describe the | wor | king of sensitivity, conduc | tivity and energy generation in wear | abl | e devices. |
| 3 | Explain the v | varic | us facets of wearable appli | cation, advantage & challenges. | | |
| 4 | Understand of | liffe | rent testing and calibration | in wearable devices. | | |

| Unit-I | 08 Hrs |
|--|-----------------|
| Introduction: world of wearable (WOW), Role of wearable, The Emerging Concept of | Big Data, The |
| Ecosystem Enabling Digital Life, Smart Mobile Communication Devices, Attributes | of Wearables, |
| Taxonomy for Wearables, Advancements in Wearables, Textiles and Clothing, Applications | s of Wearables. |
| [Ref 1: Chapter 1.1] | |

Unit – II 08 Hrs Wearable Bio and Chemical Sensors: Introduction, System Design, Microneedle Technology, Sampling Gases, Types of Sensors, Challenges in Chemical Biochemical Sensing, Sensor Stability, Interface with the Body, Textile Integration, Power Requirements, Applications: Personal Health, Sports Performance, Safety and Security, Case studies. [Ref 1: Chapter 2.1]

| Unit –III | 07 Hrs |
|--|-----------------|
| Smart Textile: Conductive fibres for electronic textiles: an overview, Types of con | nductive fibre, |
| Applications of conductive fibres, Bulk conductive polymer yarn, Bulk conductive | polymer yarn, |
| Techniques for processing CPYs, Wet-spinning technique, Electrospinning technique, case | studies, Hands |
| on project in wearable textile: Solar Backpack, LED Matrix wallet. [Ref 2: Chapter 1,2] &. | Ref 3: Chapter |
| 6,9] | |
| Unit –IV | 08 Hrs |

| | 00 1115 |
|---|---------------|
| Energy Harvesting Systems: Introduction, Energy Harvesting from Temperature Gradien | ıt, |
| Thermoelectric Generators, Dc-Dc Converter Topologies, Dc-Dc Converter Design for Ult | tra-Low Input |
| Voltages, Energy Harvesting from Foot Motion, Ac-Dc Converters, Wireless Energy Trans | smission, |
| Energy Harvesting from Light, Case studies. [Ref 1: Chapter 4.1] | |

| Unit –V | 08 Hrs |
|---|-----------------|
| Wearable antennas for communication systems: Introduction, Background of textile an | tennas, Design |
| rules for embroidered antennas, Integration of embroidered textile surfaces onto polyn | mer substrates, |
| Characterizations of embroidered conductive, textiles at radio frequencies, RF p | erformance of |
| embroidered textile antennas, Applications of embroidered antennas. [Ref 2: Chapter 10] | |

| Course | e Outcomes: After completing the course, the students will be able to |
|-------------|---|
| CO1: | Describe the different types and wearable sensors, textile, energy harvesting systems and antenna |
| CO2: | Analysis measurable quantity and working of wearable electronic devices. |
| CO3: | Determine & interpret the outcome of the wearable devices and solve the design challenges |
| CO4: | Analyse and Evaluate the wearable device output parameter in real time scenario or given problem |
| | statement. |

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20.

Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and Self-Study(S). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for Self-study is 20. The total marks of CIE are 100.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for each course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

| Unit-I | 06 Hrs |
|--|------------|
| Overview of Automation in Industry | |
| Basic kinds of Industrial type equipment, automation and process control, mechanization vs au | tomation. |
| continuous and discrete control, basic elements of an automated system, advanced automation | functions, |
| levels of automation, basic automation circuits. | |
| Unit-II | 10 Hrs |
| Sensors and Industrial Switching elements. | |
| Sensor terminology, Classification of sensors and transducers, Limit switch, Temperature s | ensors, |
| Light sensors, position sensors, inductive and capacitive proximity sensors, optical encoders, | Relays, |
| Solenoids, moving part logic elements, fluidic elements, timers, comparisons between sw | vitching |
| elements. | |
| Industrial Automation Synthesis | |
| Introductory principles, basic automation examples, meaning of the electrical and mechanical | latch, |
| automation circuits with sensors, design regulations and implementation. | |
| Unit-III | 10 Hrs |
| Logical Design of Automation Circuits | |
| Postulates and theorems of Boolean algebra, Classical state diagrams, state diagrams with sens | ors, step |
| by step transition due to discrete successive signal, state diagram with time relays, compone | nts state |
| diagram method, state diagrams and minimum realisations, sequential automation s | systems, |
| Applications - Bi directional lead screw movable worktable with two speeds, Palindromic mo | ovement |
| of a worktable with memory. | |
| Elements of electro pneumatic actuation | |
| Basic elements of pneumatic system, pneumatic cylinders, Symbolic representations of pneum | atic and |
| electrical switching devices, Indirect control of double acting cylinders, memory control | circuit, |
| cascading design, automatic return motion, quick exhaust valve circuit, and cyclic operat | ion of a |
| cylinder, pressure sequence valve and time delay valve circuits. Automatic return motion, Se | parating |
| similar balls, Stamping device. | |
| Unit-IV | 06 Hrs |
| Numerical Control and Robotics | · |
| Numerical control, components of CNC, classification, coordinate systems, motion control str | ategies, |
| | - |

Numerical control, components of CNC, classification, coordinate systems, motion control strategies, interpolation, NC words, Simple part programming for turning, milling and drilling. Components of the robot, base types, grippers, Configurations and simple programming using VAL.

| Unit-V | 07 Hrs |
|--------|--------|
| | |

Programmable logic control systems

Internal structure, principles of operation, latching, ladder diagrams, programming instructions, types of timers, forms of counters, writing simple ladder diagrams from narrative description and Boolean logic. Programming exercises on motor control in two directions, traffic control, cyclic movement of cylinder, conveyor belt control, alarm system, sequential process, and continuous filling operation on a conveyor.

| Course | Outcomes: After completing the course, the students will be able to |
|-------------|---|
| CO1: | Recall and Illustrate the application of sensors actuators, switching elements and inspection |
| | technologies in industrial automation. |
| CO2: | Build the circuit diagrams for fluid power automation, Ladder diagrams for PLC and |
| | identify its application areas. |
| CO3: | Evaluate CNC part programs for 2D complex profiles, perform machining and turning |
| | centres interfaced with Robots. |
| CO4: | Develop a suitable industrial automated system integrating all of the above advanced |
| | automation concepts |

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20.

Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

| Unit – V | 09 Hrs | | | | |
| Marketing, Sales, Regulations and Intellectual Property | | | | | |
| Positioning and Branding; Channels; Sales Planning; Project Management; Basics of Business | | | | | |

Regulations; How to Get Help to Get Started; Patents, Trademark, Licensing, Contracts; Common Legal mistakes, Types of Permits, Tax Registration Documents, Compliance; Infringement and Remedies, Ownership and Transfer.

| Course | Course Outcomes: After completing the course, the students will be able to | | | | |
|------------|--|--|--|--|--|
| CO1 | Showcase the ability to discern distinct entrepreneurial traits | | | | |
| CO2 | Know the parameters to assess opportunities and constraints for new business ideas | | | | |
| CO3 | Understand the systematic process to select and screen a business idea | | | | |
| CO4 | Design strategies for successful implementation of ideas | | | | |
| CO5 | Create Business Model and develop Minimum Viable Product | | | | |

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20. **Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.**

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part - A and Part - B. Part - A consists of objective type questions for 20 marks covering the complete syllabus. Part - B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

| | | | | | | | | |
| Co | urse Learning | Objectives: The students | will be able to | | | | | |
| 1 | Improve qualit | ative and quantitative prob | lem solving skills. | | | | | |
| 2 | 2 Apply critical and logical thinking process to specific problems. | | | | | | | |
| 3 | Ability to verbally compare and contrast words and arrive at relationships between concepts based | | | | | | | |
| 5 | on verbal reaso | oning. | | | | | | |

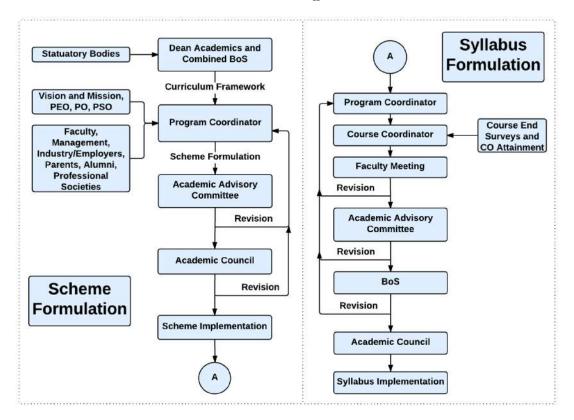

4 Applying good mind maps that help in communicating ideas as well as in technical documentation

| V Semester | |
|---|----------|
| UNIT-I | |
| Aptitude Test Preparation- Importance of Aptitude tests, Key Components, Quantitative Aptitude – Problem Solving, Data Sufficiency, Data Analysis - Number Systems, Math Vocabulary, fraction decimals, digit places etc. Reasoning and Logical Aptitude, - Introduction to puzzle and games organizing information, parts of an argument, common flaws, arguments and assumptions. Analytical Reasoning, Critical Reasoning. | 06 Hrs |
| UNIT-II | |
| Verbal Analogies - What are Analogies, How to Solve Verbal Analogies & developing Higher Vocabulary, Grammar, Comprehension and Application, Written Ability. Non- Verbal Reasoning, Brain Teasers. Creativity Aptitude. Group Discussion- Theory & Evaluation : Understanding why and how is the group discussion conducted, The techniques of group discussion, Discuss the FAQs of group discussion, body language during GD. | 06 Hrs |
| UNIT-III.A | <u>.</u> |
| Resume Writing- Writing Resume, how to write effective resume, Understanding the basic essentials for a resume, Resume writing tips Guidelines for better presentation of facts. | 06 Hrs |
| VI Semester | |
| UNIT-III.B | |
| Technical Documentation - Introduction to technical writing- Emphasis on language difference between general and technical writing, Contents in a technical document, Report design overview & format Headings, list & special notes, Writing processes, Translating technical information, Power revision techniques, Patterns & elements of sentences, Common grammar, usage & punctuation problems. | 06 Hrs |
| UNIT-IV | <u>.</u> |
| Interview Skills -a) Personal Interviews , b) Group Interviews , c) Mock Interviews - Questions asked & how to handle them, Body language in interview, Etiquette, Dress code in interview, Behavioral and technical interviews, Mock interviews - Mock interviews with different Panels. Practice on stress interviews, technical interviews, General HR interviews etc. | 06 Hrs |
| UNIT-V | - |
| Interpersonal Relations - Optimal Co-existence, Cultural Sensitivity, Gender sensitivity Adapting to the Corporate Culture- Capability & Maturity Model, Decision Making Analysis, Brain Storm. Adapting to the Corporate Culture. | 06 Hrs |

| Cou | Course Outcomes: After completing the course, the students will be able to | | | | | | |
|-----------------|---|--|--|--|--|--|--|
| CO1 | CO1 Inculcate employability skill to suit the industry requirement. | | | | | | |
| CO ₂ | Analyze problems using quantitative and reasoning skills | | | | | | |
| CO3 | Exhibit verbal aptitude skills with appropriate comprehension and application. | | | | | | |
| CO4 | Focus on Personal Strengths and Competent to face interviews and answer | | | | | | |
| | | | | | | | |

Scheme of Continuous Internal Examination and Semester End Examination

| Phase | Activity | Weightage |
|-----------|--|---------------|
| Phase I | CIE will be conducted during the 5 th semester and evaluated for 50 marks. | 50% |
| V Sem | The test will have two components. The Quiz is evaluated for 15 marks and | |
| | second component consisting of questions requiring descriptive answers is | |
| | evaluated for 35 marks. The test & quiz will assess the skills acquired | |
| | through the training module. | |
| | SEE is based on the test conducted at the end of the 5 th semester The test | |
| | will have two components a Quiz evaluated for 15 marks and second | |
| | component consisting of questions requiring descriptive answers is | |
| | evaluated for 35 marks. | |
| Phase II | During the 6 th semester a test will be conducted and evaluated for 50 marks. | 50% |
| VI Sem | The test will have two components a Short Quiz and Questions requiring | |
| | descriptive answers. The test & quiz will assess the skills acquired through | |
| | the training module. | |
| | SEE is based on the test conducted at the end of the 6 th semester The test | |
| | will have two components. The Quiz evaluated for 15 marks and second | |
| | component consisting of questions requiring descriptive answers is | |
| | evaluated for 35 marks | |
| Phase III | At the end of the VI Sem Marks of CIE (5th Sem and 6th Sem) is consolidated | for 50 marks |
| At the | (Average of Test1 and Test 2 (CIE 1+CIE2)/2. | |
| end of VI | At the end of the VI Sem Marks of SEE (5 th Sem and 6 th Sem) is consolution | idated for 50 |
| Sem | marks (Average of CIE 1 and CIE 2 (CIE 1+CIE2)/2. | |

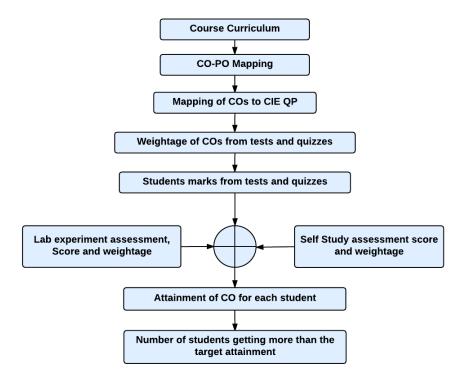

Curriculum Design Process

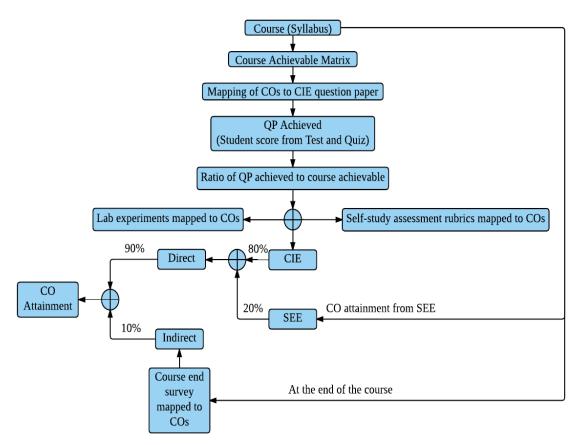

Academic Planning And Implementation

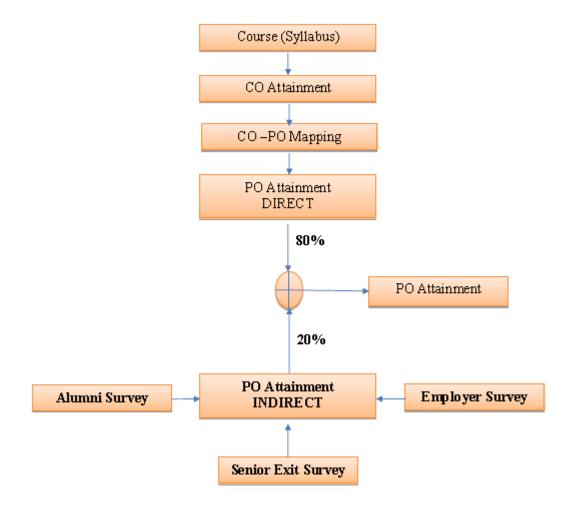

Final CO Attainment Process

RV College Of Engineering[®], Bengaluru- 560059

Program Outcome Attainment Process

PROGRAM OUTCOMES (POs)

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation for the solution of complex engineering problems.

2. **Problem analysis:** Identify, formulate, research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety, and cultural, societal, and environmental considerations.

4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modelling to complex engineering activities, with an understanding of the limitations.

6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with the society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. Life-long learning: Recognise the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
