Rashtreeya Sikshana Samithi Trust

R.V. College of Engineering

(Autonomous Institution affiliated to VTU, Belagavi)

Department of Mechanical Engineering

Master of Technology (M.Tech.)

Product Design and Manufacturing

Scheme and Syllabus of Autonomous System w.e.f 2016

Vision

Quality education in Design, Materials, Thermal and Manufacturing with emphasis on research, sustainable technologies and entrepreneurship for societal symbiosis.

Mission

- Imparting knowledge in basic and applied areas of Mechanical Engineering.
- Providing state-of-the-art laboratories and infrastructure for academics and research in the areas of design, materials, thermal engineering and manufacturing.
- Facilitating faculty development through continuous improvement programs.
- Promoting research, education and training in materials, design, manufacturing, Thermal Engineering and other multidisciplinary areas.
- Strengthening collaboration with industries, research organizations and institutes for internship, joint research and consultancy.
- Imbibing social and ethical values in students, staff and faculty through personality development programs

Program: M.Tech in Product Design and Manufacturing

Program Specific Criteria (PSC) as per American Society of Mechanical Engineers

The curriculum is designed to enable the students to (a) apply principles of engineering design, analysis, selection of materials and manufacturing processes using modern tools and techniques to new products; (b) be proficient in product costing, quality assessment and its life cycle management; (c) work in teams, communicate effectively, demonstrate concern for environment and sustainability of products and processes.

The faculty members of the program possess in-depth understanding and expertise in their areas of specialization with a commitment to periodically update their knowledge in respective domains.

Program Educational Objectives (PEO)

M.Tech in Product Design and Manufacturing Graduate will be able to

- **PEO1:** Demonstrate knowledge and understanding of engineering principles to design and analyze products and their manufacturing processes.
- **PEO2:** Apply modern tools to evaluate product cost, quality and management of its life cycle.
- **PEO3**: Create new products by synthesizing functional requirements with a concern for environment and sustainability.
- **PEO4:** Exhibit good communication skills, ability for life long learning, team work, and professional ethics.

Program Outcomes (PO)

M. Tech. in Product Design and Manufacturing graduates will be able to:

- **PO1:** Engineering Knowledge: Apply knowledge of mechanical engineering in the areas of design, manufacturing and materials to design products.
- **PO2: Problem Analysis**: Identify need for new product development and design appropriate products.
- **PO3:** Design & Development of Solutions: Design and implement new products with improved performance.
- **PO4:** Modern Tool Usage: Use advanced software tools to design, analyze and evaluate products for its functional requirements and life cycle.
- **PO5:** Engineer and Society: Develop new products considering public health and safety
- **PO6:** Environment and Sustainability: Design and evaluate products considering environment and sustainability.
- **PO7:** Ethics: Apply professional, legal, ethical issues while designing products
- **PO8:** Individual and team work: Function effectively in teams and in diverse multidisciplinary environments to accomplish common goals.
- **PO9:** Communication: Communicate effectively with diverse groups to exhibit leadership qualities in working environment

- **PO10: Project Management and Finance**: Apply principles of project management for effective execution of product development and product life cycle management.
- **PO11:** Life-long Learning: Pursue life-long learning for enhancing knowledge and skills.

Program Specific Outcomes (PSO)

M.Tech in Product Design and Manufacturing Graduate will be able to

- **PSO1:** Design products, select materials and process, perform simulation and analysis for automobile, consumer goods, machine tools and allied industries.
 - **PSO2:** Apply the knowledge of quality, ergonomics, product life cycle management and costing to engineering products and systems

Scheme of Continuous Internal Evaluation (CIE) for Theory

CIE will consist of TWO Tests, TWO Quizzes and ONE assignment. The test will be for 30 marks each and the quiz for 10 marks each. The assignment will be for 20 marks. The total marks for CIE (Theory) will be 100 marks.

Scheme of Continuous Internal Evaluation (CIE) for Practical

CIE for the practical courses will be based on the performance of the student in the laboratory, every week. The laboratory records will be evaluated for 40 marks. One test will be conducted for 10 marks. The total marks for CIE (Practical) will be for 50 marks

Scheme of Semester End Examination (SEE) for Theory

The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one question from each unit. The total marks for SEE (Theory) will be 100 marks.

Scheme of Semester End Examination (SEE) for Practical

SEE for the practical courses will be based on conducting the experiments and proper results for 40 marks and 10 marks for viva-voce. The total marks for SEE (Practical) will be 50 marks.

Scheme of Continuous Internal Evaluation (CIE):

CIE will consist of TWO Tests, TWO Quizzes and ONE assignment. The test will be for 30 marks each and the quiz for 10 marks each. The assignment will be for 20 marks. The total marks for CIE (Theory) will be 100 marks.

Scheme of Semester End Examination (SEE):

The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one question from each unit. The total marks for SEE (Theory) will be 100 marks.

After going through this course the student will be able to:

- CO 1. Explain the concepts of Lean Manufacturing Systems.
- CO 2. Analyze the causes of waste in various processes in an organisation.
- CO 3. Apply tools and techniques of Lean Manufacturing Systems for process improvement.
- CO4: Develop strategies for planning and implementing Lean Manufacturing Systems in organizations.

After going through this course the student will be able to:

CO1: Remember the basic terms as used and applied in the context of design of experiments CO2:Understand the process of developing strategic plans for experimentation and apply the principles of DoE to generate experimental

CO3: Evaluate the performance of the research investigations based on factorial and fractional factorial de signs

CO4:Create experimental designs for product and process quality improvement projects for various scientific and engineering applications.

Unit – V 09 Hr	rs
Production: System Engineering in the factory, Engineering for production, Transition from development to production, Production operations, Acquiring a production knowledge base Problems. Operation and support: Installing, maintenance and up grading the system, Installatio and test, In-service support, Major system upgrades: Modernization, Operational factors in system	e, on
development, problems.	.11
Course Outcomes:	_
After going through this course the student will be able to:	
CO1: Explain the role of Stake holders and their need in organizational system.	
CO2: Develop and document the knowledge base for effective system engineering processes.	
CO3: Apply available tool, methods and technologies to support high technology systems.	
CO4: Create the framework for quality processes to ensure high reliability of systems.

Course Outcomes:

After going through this course the student will be able to:

- CO1: Analyze the manipulator design including actuator, drive and sensor issues
- CO2: Calculate the forward kinematics, inverse kinematics and Jacobian industrial robots
- CO3: Solve trajectory and dynamic related robotic problems
- CO4: Evaluate the different configurations and stability of autonomous robots

GUIDELINES FOR INDUSTRIAL TRAINING

Course Learning Objectives (CLO):

The students shall be able to:

- (1) Understand the process of applying engineering knowledge to industrial products & processes
- (2) Explain the importance of skilling, training and resource management.
- (3) Comprehend the importance of team work, communication and sustainable solutions.
- (4) Imbibe values, professional ethics for life long learning.
- 1) The duration of industrial training must be for a minimum of 1 week and maximum of 8 weeks on full time basis.
- 2) Industrial Training in which students pays a fee to the organization / industry will not be considered.
- 3) He/she can undergo training in one or more industry /organization.
- 4) The student must submit letters from the industry clearly specifying his / her name and the duration of the training provided by the company with authorized signatures.
- 5) Industrial training must be related to the field of specialization or the M.Tech program in which the student has enrolled.
- 6) Students undergoing industrial training are advised to use ICT tools such as skype to report their progress and submission of periodic progress reports to the faculty members.
- 7) Every student has to write and submit his/her own industrial training report to the designated faculty.
- 8) Students have to make a presentation on their industrial training in front of the departmental cmmittee and only upon approval of the presentation should the student proceed to prepare and submit the hard copy of the final report.
- The reports shall be printed on bond paper 80GSM, back to back print, with soft binding A4 size with 1.5 spacing and times new roman font size 12.
- 10) The broad format of the industrial training report shall be as follows
 - Cover Page
 - Certificate from College
 - Training Certificate from Industry / Organization
 - Acknowledgement
 - Executive Summary
 - Table of Contents
 - Chapter 1 Profile of the Organization –Organizational structure, Products, Services, Business Partners, Financials, Manpower, Societal Concerns, Professional Practices
 - Chapter 2 Details of the Training Modules
 - Chapter 3 Reflections Highlight specific technical and soft skills that you acquired References & Annexure

After going through the industrial training the student will be able to:

- CO1: Understand the process of applying engineering knowledge to solve industrial problems
- CO2: Develop skills through training relevant to industrial requirement
- CO3: Communicate effectively and work in teams
- CO4: Imbibe ethical practices and develop it as life skill.

Scheme of Continuous Internal Evaluation (CIE):

A committee comprising of Head of the Department / Associate Dean, Associate Professor, Assistant Professor and Guide would review the presentation and the progress reports in two phases. The evaluation criteria shall be as per the rubrics given below:

Scheme for Semester End Evaluation (SEE):

The evaluation will be done by ONE senior faculty from the department and ONE external faculty member from Academia / Industry / Research Organization. The following weightages would be given for the examination. Evaluation will be done in batches, not exceeding 6 students.

(1) Explanation on the application of engineering knowledge	25%
(2) Ability to comprehend the importance of skilling and training	25%
(3) Importance of communication, professional ethics, sustainability	20%
(4) Oral Presentation and Report	30%

GUIDELINES FOR INDUSTRIAL VISITS

Course Learning Objectives (CLO):

The students shall be able to:

- (1) Understand the role of industries and service organization in meeting the demands of the society.
- (2) Explain the working of different industries and organizations with an engineering perspective
- (3) Comprehend the importance of team work, communication and sustainable solutions.
- (4) Imbibe values, professional ethics for life long learning.
- 1) Student must visit a minimum of THREE organizations/industry. The duration of the visit per organization must be for ONE full day, during which he/she must comprehend the importance of organization structure, function of various departments, application of engineering knowledge, resource management, importance to environment and safety, professional ethics.
- 2) It is mandatory to visit ONE private multi-national company or public sector industry / organization, ONE medium-small enterprise and ONE rural based or NG organization.
- 3) The student must submit letter from the industry clearly specifying his / her name and the date of visit to the industry with authorized signatures.
- 4) Industrial visit must be related to the field of specialization or the M.Tech program in which the student has enrolled.
- 5) Every student has to write and submit his/her own report on each industrial visit and submit the report to the designated faculty advisor for evaluation.
- 6) A photograph outside the industry with the name and logo of the industry in the background along with the students and faculty members could be included in the report.
- 7) Students have to make a presentation on their industrial visit in front of the departmental committee and only upon approval of the presentation should the student proceed to prepare and submit the hard copy of the final report.
- 8) The reports shall be printed on bond paper 80GSM, back to back print, with soft binding A4 size with 1.5 spacing and times new roman font size 12.
- 9) The broad format of the industrial visit report shall be as follows
 - Cover Page
 - Certificate from College
 - Acknowledgement
 - Synopsis / Executive Summary
 - Table of Contents
 - Chapter 1 Profile of the PSU or MNC must include Organizational structure, Products, Services, Financials, Manpower, Societal Concerns, Professional Practices
 - Chapter 2 Profile of the SME must include Organizational structure, Products, Services, Financials, Manpower, Societal Concerns, Professional Practices
 - Chapter 3 Profile of the NGO must include Organizational structure, services, Manpower, Societal Concerns, Professional Practices
 - Chapter 4 Comparative Analysis of PSU/MNC SME NGO

• References & Annexure (Permission letters from the organizations for the visit & photographs)

Course Outcomes:

After going through this course the student will be able to:

- CO1: Classify the role of different industries and organization in addressing the needs of the society.
- CO2: Explain the process of applying engineering knowledge in industries and organizations.
- CO3: Describe the importance of communication and team work
- CO4: Recognize the importance of practicing professional ethics and need for life skills.

Scheme of Continuous Internal Evaluation (CIE):

A committee comprising of Head of the Department / Associate Dean, Associate Professor, Assistant Professor and Guide would review the presentation and the progress reports in two phases. The evaluation criteria shall be as per the rubrics given below:

Scheme for Semester End Evaluation (SEE):

The evaluation will be done by ONE senior faculty from the department and ONE external faculty member from Academia / Industry / Research Organization. The following weightages would be given for the examination. Evaluation will be done in batches, not exceeding 6 students.

25%

- (1) Explanation of the application of engineering knowledge in industries 25%
- (2) Ability to comprehend the functioning of the organization/ departments 30%
- (3) Importance of resource management, environment and sustainability 20%
- (4) Presentation Skills and Report

TECHNICAL SEMINAR								
Course Code:16MPD36CIE Marks:50								
Hrs/Week	:	L:T:P:S	0:0:4:0	SEE Marks		50		
Credits	:	2		SEE Duration		30 min		

Course Learning Objectives (CLO):

The students shall be able to:

- (1) Understand the technological developments in their chosen field of interest
- (2) Explain the scope of work and challenges in the domain area
- (3) Analyze these engineering developments in the context of sustainability and societal concerns.
- (4) Improve his/her presentation skills and technical report writing skills

GUIDELINES

- 1) The presentation will have to be done by individual students.
- 2) The topic of the seminar must be in one of the thrust areas with in-depth review and analysis on a current topic that is relevant to industry or on-going research.
- 3) The topic could be an extension or complementary to the project
- 4) The student must be able to highlight or relate these technological developments with sustainability and societal relevance.
- 5) Each student must submit both hard and soft copies of the presentation.

Course Outcomes:

After going through this course the student will be able to:

- CO1:Identify topics that are relevant to the present context of the world
- CO2: Perform survey and review relevant information to the field of study.
- CO3: Enhance presentation skills and report writing skills.
- CO4: Develop alternative solutions which are sustainable

Scheme of Continuous Internal Evaluation (CIE): Evaluation would be carried out in TWO phases. The evaluation committee shall comprise of Head of the Department / Associate Dean, Associate Professor, Assistant Professor and Guide. The evaluation criteria shall be as per the rubrics given below:

Scheme for Semester End Evaluation (SEE):

The evaluation will be done by ONE senior faculty from the department and ONE external faculty member from Academia / Industry / Research Organization. The following weightages would be given for the examination. Evaluation will be done in batches, not exceeding 6 students.

Rubrics for Evaluation:

1) Topic – Technical Relevance, Sustainability and Societal Concerns	15%
2) Review of literature	25%
3) Presentation Skills	35%
4) Report	25%

Scheme of Continuous Internal Examination (CIE)

Evaluation will be carried out in THREE Phases. The evaluation committee will comprise of: guide, two senior faculty members, one industry member and Head of the Department.

Phase	Activity	Weightage
Ι	Synopsis, Preliminary report for the approval of selected topic along	20%
5 th week	with literature survey, objectives and methodology.	20%

II 10 th week	Mid-term progress review shall check the compliance with the objectives and methodology presented in Phase I, review the work performed.	40%
III 15 th week	Oral presentation, demonstration and submission of project report. After this presentation, the student will have one week time to correct / modify his report to address the issues raised by the committee members.	40%

CIE Evaluation shall be done with marks distribution as follows:

• Selection of the topic & formulation of objectives	10%
• Design and simulation/ algorithm development/experimental setup	25%
• Conducting experiments / implementation / testing / analysis	25%
Demonstration & Presentation	20%
• Report writing	20%

Scheme for Semester End Evaluation (SEE):

The evaluation will be done by ONE senior faculty from the department and ONE external faculty member from Academia / Industry / Research Organization. The following weightages would be given for the examination. Evaluation will be done in batches, not exceeding 6 students.

1. Brief write-up about the project	5%
2. Formulation of Project Objectives & Methodology	20%
3. Experiments / Analysis Performed; Results & Discussion	25%
4. Report	20%
5. Viva Voce	30%
