**SCHEME & SYLLABUS
SECOND YEAR B.E. PROGRAMS**

BIOTECHNOLOGY

**BACHELOR OF ENGINEERING (B.E.)
2022 SCHEME**

ACADEMIC YEAR 2023-24

DEPARTMENT VISION

A Premier Department in Biotechnology Education, Research and Innovation with a Focus on Sustainable Technologies for the Benefit of Society and Environment.

DEPARTMENT MISSION

- Create state-of-the-art infrastructure for research and training in Biotechnology.
- Develop graduates who are ethical and socially concerned.
- Promoting collaboration with academia, industries and research organizations at national and international level.
- Contribute to socioeconomic development through sustainable and inclusive technologies

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

PEO1: Have a strong foundation in scientific and engineering fundamentals that prepare them for a successful career in Biotechnology and allied fields

PEO2: Function at a technically competent level in formulating and solving problems in Biotechnology

PEO3: Organize and utilize the knowledge to develop Biological processes and gene manipulation techniques

PEO4: Exhibit professionalism, ethical attitude, oral and written communication skills, team work and develop an outlook for lifelong learning

PROGRAM SPECIFIC OUTCOMES (PSOs)

PSO	Description
PSO1	Gain knowledge in Basic sciences, Mathematics and Biology to understand the Engineering problems related to Biotechnology and Bioinformatics.
PSO2	Develop the skills in the area of Biotechnology, Chemical Engineering and Informatics to solve complex Biological problems.
PSO3	Acquire technical knowledge to design, analyse, optimize and scale up Bio processes to develop value added products.
PSO4	Develop intellectual, personal and professional abilities through experiential learning and interdisciplinary projects

ABBREVIATIONS

Sl. No.	Abbreviation	Meaning
1.	VTU	Visvesvaraya Technological University
2.	BS	Basic Sciences
3.	CIE	Continuous Internal Evaluation
4.	SEE	Semester End Examination
5.	PE	Professional Core Elective
6.	GE	Global Elective
7.	HSS	Humanities and Social Sciences
8.	PY	Physics
9.	CY	Chemistry
10.	MA	Mathematics
11.	AS	Aerospace Engineering
12.	AI & ML	Artificial Intelligence & Machine Learning
13.	BT	Biotechnology
14.	CH	Chemical Engineering
15.	CS	Computer Science & Engineering
16.	CV	Civil Engineering
17.	EC	Electronics & Communication Engineering
18.	EE	Electrical & Electronics Engineering
19.	EI	Electronics & Instrumentation Engineering
20.	ET	Electronics & Telecommunication Engineering
21.	IM	Industrial Engineering & Management
22.	IS	Information Science & Engineering
23.	ME	Mechanical Engineering

INDEX

III Semester

Sl. No.	Course Code	Course Title	Page No.
1	MAT231BT*	Statistics, Laplace Transform and Numerical Methods	1-2
2	CV232AT/ME232AT/BT232AT	Environment & Sustainability / Material Science for Engineers / Bio Safety Standards and Ethics	3-8
3	BT233AI	Cell and Molecular Biology	9-11
4	BT234AI	Unit Operations	12-14
5	BT235AI	Thermodynamics and Bioanalytical Techniques	15-17
6	BT237DL	Design Thinking Lab	18-19
7	CS139DT**	Bridge Course: C Programming	20-22

IV Semester

Sl. No.	Course Code	Course Title	Page No.
1	BT241AT	Biostatistics	23-24
2	CV242AT/ME242AT/BT242AT	Environment & Sustainability / Material Science for Engineers/ Bio Safety Standards and Ethics	25-30
3	BT343AI	Programming for Computational Biology	31-33
4	BT344AI	Biochemistry	34-36
5	BT345AT	Bioprocess Calculations	37-38
6	BT246XT	Professional Core Electives – Group A	39
7	HS237XL ***/	ABILITY ENHANCEMENT COURSE	39-53
8	HS248XT	Universal Human Values	54-55
9	MAT149DT***	Bridge Course: Mathematics	56-57

Semester: III

**STATISTICS, LAPLACE TRANSFORM AND NUMERICAL METHODS
(Theory)
(AS, BT, CH, IM, ME)**

Course Code	: MAT231BT	CIE	: 100 Marks
Credits: L: T: P	: 3:1:0	SEE	: 100 Marks
Total Hours	: 45L+30T	SEE Duration	: 3.00 Hours
Unit-I			09 Hrs
Statistics: Central moments, mean, variance, coefficients of skewness and kurtosis in terms of moments. Correlation analysis, rank correlation, curve fitting, linear and multivariate regression analysis. Implementation using MATLAB.			
Unit – II			09 Hrs
Complex Analysis: Complex function, analytic function, Cauchy-Riemann equations, harmonic functions. Construction of analytic function– Milne -Thomson method. Taylor, Maclaurin, Laurent series. Zeros and poles, Residue theorem. Implementation using MATLAB.			
Unit –III			09 Hrs
Laplace Transform: Existence and uniqueness of Laplace transform, transform of elementary functions, region of convergence. Properties - linearity, scaling, s - domain shift, differentiation in the s - domain, division by t, differentiation and integration in the time domain. Laplace transform of time domain periodic functions, Heaviside unit step function, unit impulse function, t - shift property. Implementation using MATLAB.			
Unit –IV			09 Hrs
Inverse Laplace Transform: Definition, properties, evaluation using different methods. Convolution theorem. Application to solve ordinary linear differential equations. Implementation using MATLAB.			
Unit –V			09 Hrs
Numerical Methods for Partial Differential Equations: Numerical solutions to partial differential equations – Finite difference approximation to derivatives, solution of Laplace equation in two-dimension, heat and wave equations in one dimension (explicit methods). Implementation using MATLAB.			

Course Outcomes: After completing the course, the students will be able to

CO1:	Illustrate the fundamental concepts of statistics, complex analysis, Laplace & inverse Laplace transform and numerical methods.
CO2:	Apply the acquired knowledge of statistics, complex analysis, Laplace transform and numerical methods for partial differential equations to solve the problems of engineering applications.
CO3:	Analyze the solution of the problems obtained from appropriate techniques of statistics, complex analysis, Laplace transform and numerical methods to the real - world problems.
CO4:	Interpret the overall knowledge of statistics, complex analysis, Laplace transform and numerical methods to solve partial differential equations arising in many practical situations.

Semester: III/ IV

ENVIRONMENT & SUSTAINABILITY
Category: PROFESSIONAL CORE COURSE
(Common to all Programs)
(Theory)

Course Code	: CV232AT/ CV242AT		CIE	: 100 Marks
Credits: L:T:P	: 3:0:0		SEE	: 100 Marks
Total Hours	: 45 L		SEE Duration	: 3.0 Hours
Unit-I				10 Hrs
ENVIRONMENT AND BIODIVERSITY				
Definition, scope and importance of environment – need for public awareness. Eco-system and Energy flow– ecological succession. Types of biodiversity: genetic, species and ecosystem diversity– values of biodiversity, threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – endangered and endemic species of India – conservation of biodiversity.				
ENVIRONMENTAL POLLUTION				
Causes, Effects and Preventive measures of Water, Soil, Air and Noise Pollution. Solid, Hazardous and E-Waste management.				
Occupational Health and Safety Management system (OHSMS). Environmental protection, Environmental protection acts.				
Unit – II				09Hrs
RENEWABLE SOURCES OF ENERGY				
Energy management and conservation, New Energy Sources: Need of new sources. Different types of new energy sources.				
Energy Cycles, carbon cycle, emission and sequestration, Green Engineering: Sustainable urbanization- Socioeconomical and technological change.				
Applications of - Hydrogen energy, Ocean energy resources, Tidal energy conversion. Concept, origin and power plants of geothermal energy.				
Unit –III				09 Hrs
SUSTAINABILITY AND MANAGEMENT				
Introduction to Environmental Economics, Environmental Audit, Development, GDP, Sustainability - concept, needs and challenges-economic, social and aspects of sustainability - from unsustainability to sustainability-millennium development goals and protocols				
Sustainable Development Goals - targets, indicators and intervention areas Climate change - Global, Regional and local environmental issues and possible solutions. Concept of Carbon Credit, Carbon Footprint. Environmental management in industry.				
Unit –IV				09 Hrs
SUSTAINABILITY PRACTICES				
Zero waste and R concept, Circular economy, ISO 14000 Series, Material Life cycle assessment.				
Environmental Impact Assessment. Sustainable habitat: Green buildings, Green materials, Energy efficiency, Sustainable transports.				
Linear vs. cyclical resource management systems, need for systems thinking and design of cyclical systems, circular economy, industrial ecology, green technology. Specifically apply these concepts to: Water Resources, Energy Resources, Food Resources, Land & Forests, Waste management.				
Unit –V				08 Hrs
Corporate Social Responsibility (CSR) - Meaning & Definition of CSR, History & evolution of CSR. Concept of Charity, Corporate philanthropy, Corporate Citizenship, CSR-an overlapping concept. Concept of sustainability & Stakeholder Management. Relation between CSR and Corporate governance; environmental aspect of CSR; Chronological evolution of CSR in India.				
Sustainability Reporting: Flavor of GRI, Dow Jones Sustainability Index, CEPI. Investor interest in Sustainability.				

Course Outcomes: After completing the course, the students will be able to:	
CO1	Understand the basic elements of Environment and its Biodiversity.
CO2	Explain the various types of pollution and requirement for sustainable strategy for present scenario.
CO3	Evaluate the different concepts of sustainability and its significance for welfare of all life forms.
CO4	Recognize the role of Corporate social responsibility in conserving the Environment.

MATERIALS SCIENCE FOR ENGINEERS					
Category: Professional Core					
(Theory)					
Course Code	:	ME232AT		CIE	: 100 Marks
Credits: L:T:P	:	3:0:0		SEE	: 100 Marks
Total Hours	:	40L		SEE Duration	: 3 Hours
Unit-I					06 Hrs
The Fundamentals of Materials					
The electronic structure of atoms, types of atomic and molecular bonds: ionic bond, covalent bond, metallic bond, secondary bonds, mixed bonding, hybridization. Energy bands in metals, insulators, and semiconductors. Basic crystallography. Defects and dislocations. Types of materials: polymers, metals and alloys, ceramics, semiconductors, composites.					
Unit – II					10 Hrs
Material behaviour					
Thermal properties: thermal conductivity, thermoelectric effects, heat capacity, thermal expansion coefficient, thermal shock, thermocouple. Electrical Properties: dielectric behaviours and temperature dependence of the dielectric constant, insulating materials, ferroelectricity, piezoelectricity, super conductor. Optical properties: luminescence, optical fibers, Mechanical Properties: Stress-strain diagram, elastic deformation, plastic deformation, hardness, viscoelastic deformation, impact energy, fracture toughness, fatigue.					
Unit –III					10 Hrs
Materials and their Applications					
Semiconductors, dielectrics, optoelectronics, structural materials, ferrous alloys, nonferrous alloys, cement, concrete, ceramic, and glasses. Polymers: thermosets and thermoplastics, composites: fibre-reinforced, aggregated composites, electronic packaging materials, biomaterials, processing of structural materials.					
Unit –IV					07 Hrs
Heat Treatment					
Post processing heat treatment of electronic devices: thermal oxidation, diffusion, rapid thermal processing. Heat treatment of ferrous materials: annealing, spheroidizing, normalizing, hardening, tempering. formation of austenite, construction of Time Temperature Transformation (TTT) curves. Special heat treatment processes: carburizing, nitriding, cyaniding, flame, and induction hardening. Defects in heat treatment.					
Unit-V					07 Hrs
Nanomaterials					
Synthesis of nanomaterials: ball milling, sol-gel, vapour deposition growth, pulse laser, magnetron sputtering, lithography. Nano porous materials: zeolites, mesoporous materials, carbon nanotubes, graphene, nano FRPs, nano fabrics, bioresorbable and bio-erodable materials, nano ceramic, nano glasses, nano biomaterials, nano implant associated materials. Characterisation of nano structures, spectroscopic techniques, automatic force microscopy.					

Course Outcomes: After completing the course, the students will be able to:	
CO1	Understand the classification of materials, their atomic structure, and properties.
CO2	Investigate the properties and applications of different materials.
CO3	Analyse the effect of different heat treatment processes.
CO4	Recognize different types of nanomaterials, synthesis methods and characterisation techniques.

BIO SAFETY STANDARDS AND ETHICS
Category: PROFESSIONAL CORE COURSE
(Common to all Programs)
(Theory)

Course Code	:	BT232AT/ BT242AT	CIE	:	100 Marks
Credits: L: T:P	:	3:0:0	SEE	:	100 Marks
Total Hours	:	45L	SEE Duration	:	3 Hours
Unit-I					09 Hrs
Biohazards, Bio safety levels and cabinets: Introduction to Biohazards, Biological Safety levels, Bio safety Cabinets, Study of various types of Bio safety cabinets. Various parameters for design of Biosafety cabinets (Materials used for fabrication, sensors, filters, pumps, compressors)					
Unit – II					08 Hrs
Biosafety Guidelines: Biosafety guidelines of Government of India, GMOs & LMOs, Roles of Institutional Biosafety Committee, RCGM (Review Committee on Genetic Manipulation), GEAC (Genetic Engg Approval Committee) for GMO applications in food and agriculture. Overview of National Regulations and relevant International Agreements including Cartagena Protocol.					
Unit –III					10 Hrs
Food safety standards: FSSAI (Food Safety and Standards Authority of India), Functions, License, types of FSSAI Licences and compliance rules. Food Hygiene: General principles of food microbiology and overview of foodborne pathogens, sources of microorganisms in the food chain (raw materials, water, air, equipment, etc.) Quality of foods, Microbial food spoilage and Foodborne diseases, Overview of beneficial microorganisms and their role in food processing and human nutrition, Food Analysis and Testing, General principles of food safety management systems, Hazard Analysis Critical Control Point (HACCP).					
Unit –IV					09 Hrs
Food Preservations, processing, and packaging Food Processing Operations, Principles, Good Manufacturing Practices HACCP, Good production, and processing practices (GMP, GAP, GHP, GLP, BAP, etc) Overview of food preservation methods and their underlying principles including novel and emerging methods/principles Overview of food packaging methods and principles including novel packaging materials.					
Unit-V					09 Hrs
Food safety and Ethics: Food Hazards, Food Additives, Food Allergens Drugs, Hormones, and Antibiotics in Animals. Factors That Contribute to Foodborne Illness, Consumer Lifestyles and Demand, Food Production and Economics, History of Food Safety, The Role of Food Preservation in Food Safety. Ethics: Clinical ethics, Health Policy, Research ethics, ethics on Animals. Biosafety and Bioethics.					

Course Outcomes: After completing the course, the students will be able to:

CO1	Have a comprehensive knowledge of Biohazards and bio safety levels
CO2	Understand the biosafety guidelines and their importance to the society
CO3	Acquire knowledge with respect to the Food standards, Hygiene, food processing and packing
CO4	Appreciate the food safety, Ethics, biosafety and bio ethics

CELL AND MOLECULAR BIOLOGY
Category :PROFESSIONAL CORE COURSE
(Theory and Practice)

Course Code	: BT233AI	CIE	: 100 + 50 Marks
Credits: L:T:P	: 3:0:1	SEE	: 100 + 50 Marks
Total Hours	: 45L+30P	SEE Duration	: 3 hrs
Unit-I			08 Hrs
Cell: Structure of Prokaryotic and Eukaryotic cell. DNA as the Genetic material: Griffith, Hershey-Chase experiments. Cell cycle and its regulation, Mitosis and meiosis, Cell signaling: Reception, transduction and response. Programmed cell death. Structure and functions of Chloroplast and Mitochondria.			
Unit – II			10 Hrs
Central Dogma of Molecular Biology: Replication of DNA in Prokaryotic cell and Eukaryotic cell. Mechanism of action of telomerase, DNA damage, and repair: Base excision repair, mismatch excision repair, photo-reactivation, nucleotide excision, and SoS repair. Homologous & non-homologous recombination, Transposons: DNA Transposons and retrotransposons. Transcription in the prokaryotic and eukaryotic cell: Initiation, elongation, and termination. Processing of mRNA. Translation in the prokaryotic and eukaryotic cell: Initiation, elongation, and termination. Post-translational modification of proteins. Secretory and nonsecretory (Chloroplast and Mitochondria) protein-sorting pathways in eukaryotic cells.			
Unit –III			09 Hrs
Gene Regulation: Regulation of gene expression in prokaryotes (lac-operon and trp-operon). Positive and negative gene regulation in prokaryotes, mechanism of riboswitches. Regulation of gene expression in eukaryotes: Transcriptional, RNA processing, Translational, and Post-translational level. Regulation of gene expression by Hormones (steroid hormone, auxin, and gibberellic acid) in eukaryotes. Gene silencing: antisense technique, RNA interference (miRNA and si RNA) and Ribozymes. Genome editing systems (CRISPR/Cas9, Zinc finger nucleases and TALENs).			
Unit –IV			09 Hrs
Microbiology: Structure of Bacteria (<i>Escherichia coli</i>), Blue green algae (<i>Spirulina</i>), Fungi (<i>Saccharomyces cerevisiae</i>), Protozoa, (Amoeba), and Viruses (Bacteriophage, Coronavirus). Horizontal gene transfer in bacteria: Conjugation, Transformation and Transduction. Culture of microorganisms: Nutrient media preparation, Sterilization of media, Isolation of microorganisms from soil sample, Growth and Measurement of bacteria, replica-plating technique. Simple and Differential (Gram) staining techniques. Beneficial microflora for Humans, agriculture, environment, and industry. Human diseases caused by fungi, protozoa, bacteria and viruses.			
Unit –V			09 Hrs
Immunology: Immune system, Innate and adaptive immune response, Human antibody: Structure, types, and functions. Vaccines: Inactivated, attenuated, viral vector, protein subunit, DNA, and RNA vaccines. Cancer: Causes and Genetics, Oncogenes, tumour suppressor genes, signalling pathways in tumorigenesis. Immunological Techniques: Immunofluorescence, rocket immunoelectrophoresis (RIEP), Radio-immuno-assay, and ELISA.			

LABORATORY EXPERIMENTS

Isolation of microorganisms from soil sample by serial dilution technique: spread plate, streak plate, and pour plate technique.

Culture of microorganisms: study of bacterial growth curve

Staining of microorganisms: Simple (Fungi) and Differential (Gram) staining.

Isolation of cellulase/pectinase/amylase producing microorganisms from soil sample.

Antibiotic sensitivity testing of bacteria.

Isolation of genomic DNA from bacteria.

Isolation of chloroplast from plant cells.

Study of divisional stages of mitosis and meiosis in plants (Onion)

Rocket immunoelectrophoresis (RIEP)

Enzyme linked Immunosorbent Assay (ELISA)

Experiential learning

Innovative Projects:

Isolation of industrially important microbes.

Production of useful compounds from microbes.

Plant-microbe interaction.

Formulation of bio pesticides.

Formulation of biofertilizers.

Detection of microbial contamination in water and food.

Isolation of genomic DNA from bacteria/plant/animal cells.

Extraction of total proteins from plant seeds.

Early detection of diseases in plants/humans.

Students can pick up any one project as part of experiential learning

Course Outcomes: After completing the course, the students will be able to

CO1	Acquire knowledge on various molecular mechanisms/processes of the cell.
CO2	Compare and contrast various cellular and molecular mechanisms of the cell.
CO3	Apply various techniques required for isolation, culture and manipulation of cells, and detection of proteins/DNA/enzymes/antigens/antibodies in the sample.
CO4	Analyse and articulating the biological information, designing experiment and interpret the results.

UNIT OPERATIONS
Category :PROFESSIONAL CORE COURSE
(Theory and Practice)

Course Code	:	BT234AI		CIE	:	100 + 50 Marks
Credits: L:T:P	:	3:0:1		SEE	:	100 + 50 Marks
Total Hours	:	45L + 30P		SEE Duration	:	03 Hours
Unit-I						09 Hrs
Introduction to Fluid Mechanics: Fluid Statics- Hydrostatic equilibrium, Barometric equation, Pressure measurements- Manometers-U tube, Differential U tube. Fluid dynamics - Shear stress, Shear strain, Newton's law of viscosity, Newtonian and Non Newtonian fluids. Fluid flow: Continuity equation, Bernoulli's equation, Hagen-Poiseuille's equation, simple numerical.						
Unit – II						09 Hrs
Flow metering and measurement: Construction and working of Centrifugal pump, reciprocating pump, cavitation, NPSH. Applications of Bernoulli's equation- Venturimeter, Orifice meter, Pitot tube, Rotameter. Heat Transfer: Modes of heat transfer. Steady state conductions through single-layer, composite- layer, slabs, cylinders, spheres with constant thermal conductivity. Natural and forced convection. Film co- efficient, overall Heat transfer co-efficient. Log mean temperature difference (LMTD), simple problems						
Unit –III						09 Hrs
Heat Exchange Equipment: Construction and elementary design of double pipe heat exchanger, shell and tube heat exchanger. Simple numerical to calculate heat transfer area in heat exchangers. Evaporation: Single effect and multiple effect evaporators, Capacity and economy, types of feeding arrangements in multiple effect evaporators						
Unit –IV						09 Hrs
Particle Size Analysis: Size reduction- Laws of Size reduction, Work Index, Equipment for size reduction- Ball mill, drop weight crusher. Settling: Drag, drag coefficient. Types of settling, Terminal settling velocity for one dimensional motion of spherical particle through gravitation force and external force. Motion of particles in Stoke's, Newton's and intermediate, Filtration: Classification of filtration, Characteristics of filter media and filter aids, Industrial filters- rotary drum filter, leaf filter						
Unit –V						09 Hrs
Distillation: Types of distillation: simple, flash, steam distillation. Distillation with and without reflux, types of feed line, reflux ratio, minimum reflux ratio, McCabe Thiele Method to find number of plates. Liquid – liquid Extraction: Single stage and multistage extraction and number of theoretical stages for continuous counter current, multistage extraction operation when liquids are insoluble. Numericals						

LAB EXPERIMENTS

1. Determination of percentage of extraction of biological compounds.
2. Determination of Freundlich and Langmuir isotherms for adsorption of biological compounds.
3. Determination of specific cake resistance ' α ' and filter medium resistance ' R_m ' using a leaf filter for filtration of biological compounds
4. Verification of Rayleigh's equation for simple distillation of biological compounds.
5. Determine the discharge co-efficient (Cd) of Orifice meter.
6. Determine the discharge co-efficient (Cd) of Venturimeter.
7. Determination of the friction factor for the flow of water through a packed bed using Ergun's equation.
8. Determine the friction factor for the flow of water in the pipes
9. Determine the heat transfer coefficient in shell and tube heat exchanger
10. Determine the heat transfer coefficient in double pipe heat exchanger
11. Determine the emissivity of a cylinder and sphere
12. Steam distillation for biological sample.

Course Outcomes: After completing the course, the students will be able to	
CO1	Understand the basic fluid flow principles and solve the problems with the application of conservation laws.
CO2	Design and analyze the performance of heat exchangers and Single stage evaporator
CO3	Apply the knowledge of solid-solid and fluid -solid separation techniques for various applications including environmental pollution control
CO4	Apply the mass transfer concepts in the design of an extraction and distillation column

THERMODYNAMICS & BIOANALYTICAL TECHNIQUES

Category: PROFESSIONAL CORE COURSE

(Theory and Practice)

Course Code	:	BT235AI	CIE	:	100 + 50 Marks
Credits: L:T:P	:	3:0:1	SEE	:	100 + 50 Marks
Total Hours	:	45L+30P	SEE Duration	:	3 Hrs

Unit-I

09 Hrs

Introduction: The Scope of Thermodynamics, Dimensions and Units, Measures of amount size, force, temperature, pressure, work, energy and heat.
The First Law and other Basic Concepts: Internal energy, The first law of thermodynamics for open and close systems, Thermodynamic state and state functions, Equilibrium, the phase rule, Enthalpy, Heat capacity.

Unit – II

09 Hrs

The Second Law of Thermodynamics: Statement, heat engines, heat pumps, Entropy, entropy changes for ideal gas (constant volume, pressure, temperature and adiabatic processes), Carnot cycle.
Vapor/Liquid Equilibrium: Introduction, criteria for phase equilibrium, T-x,y, P-x,y, and x-y diagrams and numerical for Ideal system.

Unit –III

09 Hrs

Solution Thermodynamics: Fugacity and fugacity coefficient. Partial molar properties, Chemical potential, and Gibbs Duhem equation. Numerical
Chemical Reaction Equilibria: The reaction coordinate, application of equilibrium criteria to chemical reactions, The standard Gibbs-Energy Change and the Equilibrium constant, Effect of temperature on the equilibrium constant, evaluation of equilibrium constants, Relation of equilibrium constants to composition, equilibrium conversions for single reactions.

Unit –IV

09 Hrs

Electrophoresis and Chromatography - Principle, types and applications of agarose gel electrophoresis, native gel electrophoresis, sodium dodecyl sulphate polyacrylamide gel electrophoresis (SDS PAGE) and 2D gel electrophoresis.
Chromatographic techniques: Affinity chromatography, ion exchange chromatography, gel filtration chromatography, Thin layer chromatography, High performance Liquid chromatography, Fast Protein Liquid chromatography, Gas chromatography

Unit –V

09 Hrs

Centrifugation and Spectroscopic Analytical Techniques: Centrifugation – Principle, types and applications of Preparative, analytical and ultracentrifugation. Centrifugation standards.
Spectroscopic Analytical Techniques: Basic concepts and principles of spectroscopy, UV-Visible, infrared and atomic absorption spectroscopy, Mass Spectrometry, Fluorescence spectroscopy, Raman spectroscopy, Nephelometry and Turbidometry.

LAB EXPERIMENTS

1. Determination of protein concentration
2. Determination of nucleic acid concentration
3. Determination of absorbance maxima of biologically important samples: Pigments / DNA/Protein.
4. Ion Exchange chromatography
5. Thin layer chromatography
6. Gel filtration chromatography
7. Analysis of DNA using Agarose gel electrophoresis
8. Flash and pour Point calculation.

Open ended experiment

1. Analysis of Proteins using SDS PAGE
2. Separation of Molecules using Centrifugation technique
3. Estimation of sulphate in a given sample using Turbidometer.
4. Determine the partial molar volume of a component in a binary mixture at ambient condition (given temperature and pressure)
5. Study the characteristics response of the different types of temperature devises.

All students should do 8 lab experiments and any 2 open ended experiments.

Course Outcomes: After completing the course, the students will be able to

CO1	Apply the laws of thermodynamics on closed and open systems.
CO2	Evaluate the thermodynamic properties of ideal and real gases.
CO3	Use different bioanalytical techniques to solve biological problems and to analyze biological systems/samples.
CO4	Design simple experiments to isolate and characterize biomolecules.

DESIGN THINKING LAB

**Category: PROFESSIONAL CORE COURSE
(Lab)**

Course Code	:	BT237DL	CIE	:	50 Marks
Credits: L:T:P	:	00:00:02	SEE	:	50 Marks
Total Hours	:	30 P	SEE Duration	:	3Hours

Guidelines

STAGE-I

Empathy: The Empathy phases of the process are focused on understanding the experiences, emotions and motivations of others. Designers use specific empathy methods to learn more about the needs of the users for whom they are designing. Empathy is the centerpiece of a human-centered design process. The Empathize mode is the work you do to understand people, within the context of your design challenge. **Methods:** Interviewing Probes, survey and Observations.

STAGE-II

Define: The Define phase of the process is focused on developing a point of view about the need of your user. During this stage of process, designers narrow from lots of information to a statement that is inspiring and specific. **Methods:** Empathy Mapping, Point of View.

STAGE-III

Ideate: The Ideate phase of the process is focused on generating as many solutions to a problem as possible. Once many solutions have been generated, students will select one to move forward to prototyping. **Methods:** Brainstorming and Selection

STAGE-IV

Prototype: The Prototype phase is where designers construct representation of their solutions. These representations are intended to elicit feedback and answer specific questions about a concept. **Methods:** Improve, Rapid and Experiential Prototyping

STAGE-V

Test: The Test phase of the process is focused on getting specific feedback about how ideas can improve. It is important to remember during this phase that prototypes are imperfect, but feedback is gift. **Methods:** Testing

Guidelines for Design Thinking Lab:

1. The Design Thinking Lab (DTL) is to be carried out by a team of two-three students.
2. Each student in a team must contribute equally in the tasks mentioned below.
3. Each group has to select a theme that will provide solutions to the challenges of societal concern. Normally three to four themes would be identified by the department
4. Each group should follow the stages of Empathy, Design, Ideate, Prototype and Test for completion of DTL.
5. After every stage of DTL, the committee constituted by the department along with the coordinators would evaluate for CIE. The committee shall consist of respective coordinator & two senior faculty members as examiners. The evaluation will be done for each student separately.
6. The team should prepare a Digital Poster and a report should be submitted after incorporation of any modifications suggested by the evaluation committee.

Design Thinking Lab Tasks

1. Carry out the detailed questionnaire to arrive at the problem of the selected theme.
2. The empathy report shall be prepared based on the response of the stake holders.
3. For the problem identified, the team needs to give solution through thinking out of the box innovatively to complete the ideation stage of DTL
4. Once the idea of the solution is ready, detailed design has to be formulated in the Design stage considering the practical feasibility.
5. If the Design of the problem is approved, the team should implement the design and come out with prototype of the system.
6. Conduct thorough testing of all the modules in the prototype developed and carry out integrated testing
7. Demonstrate the functioning of the prototype along with presentations of the same.
8. Prepare a Digital poster indicating all the stages of DTL separately. A Detailed project report also should be submitted covering the difficulties and challenges faced in each stage of DTL.
9. Methods of testing and validation should be clearly defined both in the Digital poster as well as the report.

Course Outcomes: After completing the course, the students will be able to:-

CO1	Apply the knowledge of engineering and technology to empathize with the stake holder requirements and draw insights through effective communication
CO2	Formulate, analyze and ideate sustainable solutions considering societal and environmental needs, aligning with SDGs.
CO3	Validate the knowledge effectively and pursue through intra-disciplinary or interdisciplinary teams to develop prototypes/ pretotypes
CO4	Apply 21 st century skills and Education 4.0 to enhance the solutions and engage in lifelong learning

BRIDGE COURSE: C PROGRAMMING
(Mandatory Audit Course)
(Common to all Programs)
(Theory)

Course Code	:	CS139DT		CIE	:	50 Marks
Credits: L:T:P	:	2:0:0(Audit)		SEE	:	--
Total Hours	:	30L		SEE Duration	:	--
Unit-I						6 Hrs
Introduction to Programming						
Definition of a computer. Components of computer system, Programming Languages. Design and implementation of efficient programs. Program Design Tools: Algorithms, Flowcharts and Pseudo codes. Types of Errors.						
Unit – II						6 Hrs
Introduction to C						
Introduction, structure of a C program, Writing the first program, Files used in a C program. Compiling and executing C Programs using comments, C Tokens, Character set in C, Keywords, Identifiers, Basic Data Types in C, Variables, Constants, I/O statements in C. Operators in C, Type conversion and type casting, scope of variables.						
Unit –III						6 Hrs
Decision Control and Looping Statements						
Introduction to decision control, conditional branching statements, iterative statements, Nested loops, Break and continue statements, goto statements						
Arrays						
Introduction, Declaration of Arrays, Accessing elements of an array, Storing values in arrays, Operations on Arrays- Traversing, Inserting and Deletion of element in an array. Two dimensional arrays- Operations on two dimensional arrays.						
Unit –IV						6 Hrs
Strings						
Introduction, Operations on strings- finding length of a string, converting characters of a string into uppercase and lowercase, Concatenating two strings, appending a string to another string, comparing two string, reversing a string. String and character Built in functions.						
Functions						
Introduction, Using functions, Function declaration/function prototype, Function definition, Function call, Return statement.						
Unit-V						6 Hrs
Functions						
Passing parameters to a function, Built-in functions. Passing arrays to functions. Recursion.						
Structures and Pointers						
Introduction: Structure Declaration, Typedef declaration, initialization of structures, accessing members of a structures, Introduction to pointers, declaring pointer variables.						

Course Outcomes: After completing the course, the students will be able to:-

CO 1	Analyse problems and design solution using program design tools.
CO 2	Evaluate the appropriate method/data structure required in C programming to develop solutions by investigating the problem.
CO 3	Design a sustainable solution using C programming with societal and environmental concern by engaging in lifelong learning for emerging technology
CO 4	Demonstrate programming skills to solve inter-disciplinary problems using modern tools effectively by exhibiting team work through oral presentation and written reports.

PRACTICE PROGRAMS

Implement the following programs using cc/gcc compiler

1. Familiarization with programming environment: Concept of creating, naming and saving the program file in gedit/vi editor, Concept of compilation and execution, Concept of debugging in GDB environment.
2. Implementation and execution of simple programs to understand working of
 - Formatted input and output functions- printf() and scanf().
 - Escape sequences in C.
 - Using formula in a C program for specific computation: For example: computing area of circle, converting Celsius to Fahrenheit, area of a triangle, converting distance in centimeters to inches, etc.
 - Preprocessor directives (#include, #define).
3. Execution of erroneous C programs to understand debugging and correcting the errors like:
 - Syntax / compiler errors.
 - Run-time errors.
 - Linker errors.
 - Logical errors.
 - Semantical errors.
4. Implementation and execution of simple programs to understand working of operators like:
 - Unary.
 - Arithmetic.
 - Logical.
 - Relational.
 - Conditional.
 - Bitwise.
5. Develop a C program to compute the roots of the equation $ax^2 + bx + c = 0$.
6. Develop a C program that reads N integer numbers and arrange them in ascending or descending order using selection sort and bubble sort technique.
7. Develop a C program for Matrix multiplication.
8. Develop a C program to search an element using Binary search and linear search techniques.
9. Using functions develop a C program to perform the following tasks by parameter passing to read a string from the user and print appropriate message for palindrome or not palindrome.
10. Develop a C program to compute average marks of 'n' students (Name, Roll_No, Test Marks) and search a particular record based on 'Roll_No'.
11. Develop a C program using pointers to function to find given two strings are equal or not.
12. Develop a C program using recursion, to determine GCD, LCM of two numbers and to perform binary to decimal conversion.

BIostatISTICS

Category: PROFESSIONAL CORE COURSE

(Theory)

Course Code	: BT241AT	CIE	: 100 Marks
Credits: L:T:P	: 3:0:0	SEE	: 100 Marks
Total Hours	: 45 L	SEE Duration	: 3 Hrs
Unit-I			9 Hrs
Introduction and Data presentation: Basic concepts, definitions, formulae, common terms in statistics. Tools and application of Biostatistics. Types of numerical data - Nominal data, Ordinal data, Ranked data, Discrete data and Continuous data. Tables - Frequency distribution and Relative frequency, Graphical representation, Sampling Theory – Simple Random Sampling, Systematic Sampling, Stratified Sampling, Cluster Sampling.			
Unit – II			9 Hrs
Measures of central tendency and dispersion: Central Limit Theorem, Graphical representation of data in central tendency, Mean, Median and Mode. Frequency data. Measures of variation- Dispersion, Range, Mean deviation and Standard deviation.			
Unit –III			9 Hrs
Probability and distributions: Theorems of probability, Bayes’ theorem. Probability distributions- Discrete distribution (Binomial distribution, Poisson distribution) testing of hypothesis (Chi square test, t test and z test).			
Unit –IV			9 Hrs
Correlation and Regression: Introduction, Types of correlation, Correlation coefficient - Pearson’s correlation coefficient, Spearman’s Rank correlation coefficient and their applications. Regression concepts, Types of regression - Simple Linear Regression, Multiple Regression, Logistic regression, regression validation, Goodness of fit.			
Unit –V			9 Hrs
Mathematical modelling in Biotechnology & Experimental Design: Lotka-Volterra Model of Predation, Mutation, Selection, Matrix Model of Base Substitution, mathematical model for Inheritance such as Genetic Inbreeding Model and Mendelian Model of Genetics. Growth equations of microbial populations. Experimental Design: Introduction of an experimental design, basic Concepts, principles and designing of an experiment. Randomized Block Design (RBD), completely Randomized Design (CRD), Factorial Design and Split Plot Design.			

Course Outcomes: After completing the course, the students will be able to

CO1	Understand and explain the fundamental concepts of statistics in Biostatistics
CO2	Organize Data, communicate essential features of data both numerically and graphically
CO3	Provide interpretations/conclusions of statistical problems as mathematical modelling.
CO4	Identify research questions and experimental design questions that may be answered using statistical methods and to translate the questions into the appropriate analysis procedure.

Semester: III/ IV

ENVIRONMENT & SUSTAINABILITY
Category: PROFESSIONAL CORE COURSE
(Common to all Programs)
(Theory)

Course Code	: CV242AT/CV232AT	CIE	: 100 Marks
Credits: L:T:P	: 3:0:0	SEE	: 100 Marks
Total Hours	: 45 L	SEE Duration	: 3.0 Hours
Unit-I			10 Hrs
ENVIRONMENT AND BIODIVERSITY			
Definition, scope and importance of environment – need for public awareness. Eco-system and Energy flow– ecological succession. Types of biodiversity: genetic, species and ecosystem diversity– values of biodiversity, threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – endangered and endemic species of India – conservation of biodiversity.			
ENVIRONMENTAL POLLUTION			
Causes, Effects and Preventive measures of Water, Soil, Air and Noise Pollution. Solid, Hazardous and E-Waste management.			
Occupational Health and Safety Management system (OHSMS). Environmental protection, Environmental protection acts.			
Unit – II			09Hrs
RENEWABLE SOURCES OF ENERGY			
Energy management and conservation, New Energy Sources: Need of new sources. Different types of new energy sources.			
Energy Cycles, carbon cycle, emission and sequestration, Green Engineering: Sustainable urbanization- Socioeconomical and technological change.			
Applications of - Hydrogen energy, Ocean energy resources, Tidal energy conversion. Concept, origin and power plants of geothermal energy.			
Unit –III			09 Hrs
SUSTAINABILITY AND MANAGEMENT			
Introduction to Environmental Economics, Environmental Audit, Development, GDP, Sustainability - concept, needs and challenges-economic, social and aspects of sustainability - from unsustainability to sustainability-millennium development goals and protocols			
Sustainable Development Goals - targets, indicators and intervention areas Climate change - Global, Regional and local environmental issues and possible solutions. Concept of Carbon Credit, Carbon Footprint. Environmental management in industry.			
Unit –IV			09 Hrs
SUSTAINABILITY PRACTICES			
Zero waste and R concept, Circular economy, ISO 14000 Series, Material Life cycle assessment.			
Environmental Impact Assessment. Sustainable habitat: Green buildings, Green materials, Energy efficiency, Sustainable transports.			
Linear vs. cyclical resource management systems, need for systems thinking and design of cyclical systems, circular economy, industrial ecology, green technology. Specifically apply these concepts to: Water Resources, Energy Resources, Food Resources, Land & Forests, Waste management.			
Unit –V			08 Hrs
Corporate Social Responsibility (CSR) - Meaning & Definition of CSR, History & evolution of CSR. Concept of Charity, Corporate philanthropy, Corporate Citizenship, CSR-an overlapping concept. Concept of sustainability & Stakeholder Management. Relation between CSR and Corporate governance; environmental aspect of CSR; Chronological evolution of CSR in India.			
Sustainability Reporting: Flavor of GRI, Dow Jones Sustainability Index, CEPI. Investor interest in Sustainability.			

Course Outcomes: After completing the course, the students will be able to:	
CO1	Understand the basic elements of Environment and its Biodiversity.
CO2	Explain the various types of pollution and requirement for sustainable strategy for present scenario.
CO3	Evaluate the different concepts of sustainability and its significance for welfare of all life forms.
CO4	Recognize the role of Corporate social responsibility in conserving the Environment.

MATERIALS SCIENCE FOR ENGINEERS					
Category: Professional Core					
(Theory)					
Course Code	:	ME242AT		CIE	: 100 Marks
Credits: L:T:P	:	3:0:0		SEE	: 100 Marks
Total Hours	:	40L		SEE Duration	: 3 Hours
Unit-I					06 Hrs
The Fundamentals of Materials					
The electronic structure of atoms, types of atomic and molecular bonds: ionic bond, covalent bond, metallic bond, secondary bonds, mixed bonding, hybridization. Energy bands in metals, insulators, and semiconductors. Basic crystallography. Defects and dislocations. Types of materials: polymers, metals and alloys, ceramics, semiconductors, composites.					
Unit – II					10 Hrs
Material behaviour					
Thermal properties: thermal conductivity, thermoelectric effects, heat capacity, thermal expansion coefficient, thermal shock, thermocouple. Electrical Properties: dielectric behaviours and temperature dependence of the dielectric constant, insulating materials, ferroelectricity, piezoelectricity, super conductor. Optical properties: luminescence, optical fibers, Mechanical Properties: Stress-strain diagram, elastic deformation, plastic deformation, hardness, viscoelastic deformation, impact energy, fracture toughness, fatigue.					
Unit –III					10 Hrs
Materials and their Applications					
Semiconductors, dielectrics, optoelectronics, structural materials, ferrous alloys, nonferrous alloys, cement, concrete, ceramic, and glasses. Polymers: thermosets and thermoplastics, composites: fibre-reinforced, aggregated composites, electronic packaging materials, biomaterials, processing of structural materials.					
Unit –IV					07 Hrs
Heat Treatment					
Post processing heat treatment of electronic devices: thermal oxidation, diffusion, rapid thermal processing. Heat treatment of ferrous materials: annealing, spheroidizing, normalizing, hardening, tempering. formation of austenite, construction of Time Temperature Transformation (TTT) curves. Special heat treatment processes: carburizing, nitriding, cyaniding, flame, and induction hardening. Defects in heat treatment.					
Unit-V					07 Hrs
Nanomaterials					
Synthesis of nanomaterials: ball milling, sol-gel, vapour deposition growth, pulse laser, magnetron sputtering, lithography. Nano porous materials: zeolites, mesoporous materials, carbon nanotubes, graphene, nano FRPs, nano fabrics, bioresorbable and bio-erodable materials, nano ceramic, nano glasses, nano biomaterials, nano implant associated materials. Characterisation of nano structures, spectroscopic techniques, automatic force microscopy.					

Course Outcomes: After completing the course, the students will be able to:	
CO1	Understand the classification of materials, their atomic structure, and properties.
CO2	Investigate the properties and applications of different materials.
CO3	Analyse the effect of different heat treatment processes.
CO4	Recognize different types of nanomaterials, synthesis methods and characterisation techniques.

BIO SAFETY STANDARDS AND ETHICS
Category: PROFESSIONAL CORE COURSE
(Common to all Programs)
(Theory)

Course Code	: BT242AT/BT232AT	CIE	: 100 Marks
Credits: L: T:P	: 3:0:0	SEE	: 100 Marks
Total Hours	: 45L	SEE Duration	: 3 Hours
Unit-I			09 Hrs
Biohazards, Bio safety levels and cabinets: Introduction to Biohazards, Biological Safety levels, Bio safety Cabinets, Study of various types of Bio safety cabinets. Various parameters for design of Biosafety cabinets (Materials used for fabrication, sensors, filters, pumps, compressors)			
Unit – II			08 Hrs
Biosafety Guidelines: Biosafety guidelines of Government of India, GMOs & LMOs, Roles of Institutional Biosafety Committee, RCGM (Review committee on Genetic manipulation), GEAC (Genetic Engg Approval Committee) for GMO applications in food and agriculture. Overview of National Regulations and relevant International Agreements including Cartagena Protocol.			
Unit –III			10 Hrs
Food safety standards: FSSAI (Food Safety and Standards Authority of India), Functions, License, types of FSSAI Licences and compliance rules. Food Hygiene: General principles of food microbiology and overview of foodborne pathogens, sources of microorganisms in the food chain (raw materials, water, air, equipment, etc.) Quality of foods, Microbial food spoilage and Foodborne diseases, Overview of beneficial microorganisms and their role in food processing and human nutrition, Food Analysis and Testing, General principles of food safety management systems, Hazard Analysis Critical Control Point (HACCP).			
Unit –IV			09 Hrs
Food Preservations, processing, and packaging Food Processing Operations, Principles, Good Manufacturing Practices HACCP, Good production, and processing practices (GMP, GAP, GHP, GLP, BAP, etc) Overview of food preservation methods and their underlying principles including novel and emerging methods/principles Overview of food packaging methods and principles including novel packaging materials.			
Unit –V			09 Hrs
Food safety and Ethics: Food Hazards, Food Additives, Food Allergens Drugs, Hormones, and Antibiotics in Animals. Factors That Contribute to Foodborne Illness, Consumer Lifestyles and Demand, Food Production and Economics, History of Food Safety, The Role of Food Preservation in Food Safety. Ethics: Clinical ethics, Health Policy, Research ethics, ethics on Animals. Biosafety and Bioethics.			

Course Outcomes: After completing the course, the students will be able to

CO1	Comprehensive knowledge of Biohazards and bio safety levels
CO2	Understanding the biosafety guidelines and their importance to the society
CO3	Knowledge with respect to the Food standards, Hygiene, food processing and packing
CO4	Appreciate the food safety, Ethics, biosafety and bio ethics

PROGRAMMING FOR COMPUTATIONAL BIOLOGY

Category: PROFESSIONAL CORE COURSE

(Theory and Practice)

Course Code	:	BT343AI	CIE	:	100 + 50 Marks
Credits: L:T:P	:	3:0:1	SEE	:	100 + 50 Marks
Total Hours	:	45L+30P	SEE Duration	:	3Hours
Unit-I					09 Hrs
Introduction to Genome and Proteomic databases – types and examples, databases of Proteomic, Genomic data, Metabolic pathway and Molecular structures. (Suffix trie and suffix tree, Parallel Generalized Suffix Tree Construction for Genomic Data)					
Unit – II					09 Hrs
Dynamic Programming: Introduction to dynamic Programming. Dynamic Programming methods (Top down and Bottom up). Dyanmic Programming Problem. Steps to solve Dynamic Programming Problem. Dynamic Programming Algorithms - Fibonacci series, Tree traversal with minimum cost, global alignment and local alignment of sequences, exon chaining, zukar algorithm, Double dynamic algorithm and gene finding.					
Unit –III					09 Hrs
Machine learning algorithms I: Introduction to Machine Learning. Types of Machine Learning, classification, regression and clustering. Classification algorithms – Decision Tree, Bayesian Network, SVM, Random forests, HMM and ANN. Case studies Prediction of protein functional sites, Biological activity of molecules, and classification of cancer.					
Unit –IV					09 Hrs
Machine learning algorithms II: ESTs using K-Means clustering, brain tumor segmentation and genes using P-DBSCAN, Self- Organizing Maps in Sequence analysis, UPGMA and NJ, Clustering algorithm for Protein–Protein Interaction (PPI) networks identification and Identification of Metabolic Pathways.					
Unit –V					09 Hrs
Hadoop and Big Data analytics: Introduction to Hadoop and Cloud Computing. Hadoop Architecture. Hadoop based Algorithms for Genomics and Proteomics – CloudAligner, Contrail, Myrna, MAPREDUCE, GPU-BLAST and YunBee. Case studies.					

LABORATORY EXPERIMENTS

1. Design, Develop and Execute Python program for Fibonacci series and Tree traversal with minimum cost.
2. Design, Develop and Execute Python program based on Needleman and Wunch algorithm for Global Sequence Alignment.
3. Design, Develop and Execute Python program based on Smith and Waterman for Local Sequence Alignment.
4. Design, Develop and Execute Python program to implement random classifier for Image classification.
5. Design, Develop and Execute Python program to construct Phylogenetic Tree based on UPGMA algorithm.
6. Design, Develop and Execute Python program to identify diseased genes based on Needleman and Wunch algorithm.
7. Develop and Execute Python program to implement bowtie algorithm for Genome Mapping.
8. Develop and deploy Python program Workflow for Network Analysis.
9. Perform differential gene expression assay for large RNA-seq datasets using Myrna.
10. Perform Parallel Genome Assembly using Contrail.

Course Outcomes: After completing the course, the students will be able to	
CO1	Understand Dynamic programming based and Machine Learning based algorithms for Big Data Analytics in Computational Biology.
CO2	Explore Applications Computational algorithms in Data Mining, Computational Genomics and Proteomics and Medical Imaging.
CO3	Apply the Algorithmic applications to solve the problems related to process modelling, simulation and process engineering in Life Sciences.
CO4	Use Python Programming skills to implement Dynamic programming based and Machine Learning based algorithms for Big Data Analytics in Computational Biology.

BIOCHEMISTRY

**Category: PROFESSIONAL CORE COURSE
(Theory and Practice)**

Course Code	:	BT344AI	CIE	:	100 + 50 Marks
Credits: L:T:P	:	3:0:1	SEE	:	100 + 50 Marks
Total Hours	:	45L+30P	SEE Duration	:	3Hrs

Unit-I

09 Hrs

Foundations of Biochemistry

Influence of hydrogen Bonds and other weak interactions in biomolecules, behavior of hydrophilic and hydrophobic substances in water, thermodynamics of transferring a nonpolar molecule from an aqueous solution to a nonpolar solvent, types of solutions (hypertonic, isotonic and hypotonic), osmosis and diffusion.

Ionization of water, pH, Henderson Hasselbalch equation and its significance, influence of acids and bases in altering the pH, types of buffers and preparation of buffers. The blood buffering system.

Unit – II

09 Hrs

Carbohydrates and Nucleic acids

Carbohydrates: Structure and properties of monosaccharide, disaccharide and polysaccharide (structural polysaccharides and storage polysaccharides). Carbohydrate metabolism: Aerobic and anaerobic glycolysis, tricarboxylic acid cycle and gluconeogenesis.

Nucleic acids- Nucleotides, bases, sugars, structure, types, properties and functions of DNA and RNA. Limited Flexibility of DNA. Forces stabilizing nucleic acid structures - Principles of base-stacking, base pairing and Ribose puckering. DNA melting Curve-DNA denaturation and renaturation.

Unit –III

09 Hrs

Nucleic acids and Lipids

Amino Acids: Classification, structure and properties of amino acids. Proteins: Primary, secondary (planar peptide group and its effect on limited polypeptide conformation, alpha helix, beta sheets), Ramachandran plot, Tertiary and quaternary structures. Globular and fibrous proteins. Biodegradation of amino acids- deamination, transamination and urea cycle.

Lipid metabolism: Biosynthesis and biodegradation of fatty acids. Biochemical functions of fatty acids, triacylglycerols, phospholipids, glycolipids, lipoproteins and steroids.

Unit –IV

09 Hrs

Enzymes

Enzyme classification. Enzyme catalyzed reactions, factors affecting enzyme activity, co-factors and co-enzymes. Extraction, purification and characterization of enzymes. Determination of molecular mass of enzymes. Enzyme assays. Enzyme kinetics- Michaelis-Menten Equation. Enzyme Inhibition: Competitive, uncompetitive and non-competitive. Determination of inhibition constants.

Unit –V

09 Hrs

Hormones and vitamins

The major endocrine systems and their target tissues, Hormonal Regulation of Metabolism. Common endocrine disorders: Diabetes Mellitus, Hypothyroidism, hyper thyroidism, Graves disease, Hashimoto's disease. Vitamins: Types and associated deficiency diseases, case studies. Role of Nutraceuticals in health

Laboratory Component

1. Qualitative tests for amino acids
2. Qualitative tests for carbohydrates
3. Estimation of the concentration of reducing sugars
4. Estimation of the concentration of total sugars.
5. Estimation of the concentration of total proteins
6. Estimation of the concentration of nucleic acids

Open ended experiments:

1. Enzyme extraction and determination of enzyme activity.
2. SDS- PAGE
3. Estimation of ascorbic acid
4. Calculation of K_m & V_{max} for an enzyme catalyzed reaction
5. Effect of temperature on enzyme activity
6. Effect of pH on enzyme activity

Experiments 1-6 is performed by all students. Students should pick any 3 open ended experiments from the above list of open ended experiments and perform during the semester.

PART B

Innovative Experiments (IE)

1. Extraction and Purification of enzymes
2. Purification of industrially important compounds
3. Characterization of bioactive compounds
4. Extraction and purification of valuable compounds from waste.

Students can pick up any one project as part of experiential learning

Course Outcomes: After completing the course, the students will be able to

CO1	Comprehend biochemical principles and fundamentals of biochemistry and apply them to a given scenario
CO2	Analyze complex biochemical pathways within living cells to solve a given problem
CO3	Review research literature, analyze biochemical problems and present the data following professional ethics
CO4	Conduct basic biochemical experiments, analyze, interpret and present the data

BIOPROCESS CALCULATIONS
Category: PROFESSIONAL CORE COURSE
(Theory)

Course Code	: BT345AT	CIE	: 100 Marks
Credits: L:T:P	: 3:0:0	SEE	: 100 Marks
Total Hours	: 45L	SEE Duration	: 3 Hrs

Unit-I **09 Hrs**

Basic Concepts of Units and Conversion

Introduction: Dimensions and System of Units, Fundamental and derived units, Mole Concept, Concept of mole. Expressions for composition of mixtures of solids, liquids and gases, percentage by weight, mole and volume. Composition of mixtures and solutions.

Unit – II **09 Hrs**

Material balance for various Separation Processes

Material balance without reaction: Distillation, Extraction, crystallization, evaporation, drying. Continuous filtration, batch mixing, Continuous fermentation. Simple numerical examples.

Unit –III **09 Hrs**

Material balance for various Bioprocesses

Material balance Involving Chemical reactions: Principles of Stoichiometry, Concept of limiting and excess reactants; fractional conversion, percentage of conversion, percentage yield. Material balance involving reactions with reference to ethanol production.

Unit –IV **09 Hrs**

Material balance for Recycle, Bypass and Purging Operation

Recycle by-pass and Purge: Material balances with and without reactions involving recycle; by-pass; and purge streams, Uses of recycle and purge streams, Problems involving recycle and purge streams. Simple numerical examples.

Unit –V **09 Hrs**

Stoichiometry for Microbial Process

Microbial stoichiometry – Stoichiometry of microbial growth and product formation, Growth Stoichiometry and electron balances, Biomass yield, Product stoichiometry, Theoretical Oxygen demand, Oxygen consumption in aerobic microbial cultures, Maximum possible yield in bioprocess.

Course Outcomes: After completing the course, the students will be able to

CO1	Apply the concept of dimension and unit conversion to check dimensional consistency of balanced equation and understand the specific terms used in process calculation.
CO2	Perform material balance problems without chemical reactions.
CO3	Develop material balance equations for biochemical processes with reactions.
CO4	Formulate growth medium based on stoichiometry and elemental balances.

(COURSES WILL BE LISTED IN THE BEGINNING OF THE FOURTH SEMESTER BASED ON THE
AVAILABILITY OF COURSES IN NPTEL PLATFORM)**

Semester: IV			
NATIONAL SERVICE SCHEME			
Category: ABILITY ENHANCEMENT COURSE			
(Lab)			
Course Code	:	HS247AL	CIE : 50 Marks
Credits: L: T: P	:	0:0:2	SEE : 50 Marks
Total Hours	:	30 P	SEE Duration : 02 Hrs

Prerequisites:

1. Students should have service-oriented mindset and social concern.
2. Students should have dedication to work at any remote place, any time with available resources and proper time management for the other works.
3. Students should be ready to sacrifice some of the timely will and wishes to achieve service-oriented targets on time.

Content	13 Hrs
----------------	---------------

Students must take up any one activity on below mentioned topics and must prepare contents for awareness and technical contents for implementation of the projects and has to present strategies for implementation of the same. Compulsorily must attend one camp.

CIE will be evaluated based on their presentation, approach, and implementation strategies. (Any one of the below mentioned activity)

1. Helping local schools to achieve good result and enhance their enrolment in Higher/technical/ vocational education.
2. Preparing an actionable business proposal for enhancing the village/ farmer income and approach for implementation.
3. Developing Sustainable Water management system for rural/ urban areas and implementation approaches.
4. Setting of the information imparting club for women leading to contribution in social and economic issues.
5. Spreading public awareness/ government schemes under rural outreach program. (Minimum 5 programs)
6. Contribution to any national level initiative of Government of India. For eg. Digital India, Skill India, Swachh Bharat, Atmanirbhar Bharath, Make in India, Mudra scheme, Skill development programs etc...
7. Social connect and responsibilities
8. Plantation and adoption of plants. Know your plants
9. Organic farming, Indian Agriculture (Past, Present and Future) Connectivity for marketing
10. Waste management – Public, Private and Govt organization, 5 R's
11. Water conservation techniques – Role of different stakeholders - Implementation
12. Govt. School Rejuvenation and assistance to achieve good infrastructure.
13. Organize National integration and social harmony events/ workshops / seminars. (Minimum 2 programs) and ONE NSS-CAMP

Course Outcomes: After completing the course, the students will be able to: -	
CO1	Understand the importance of his/her responsibilities towards society.
CO2	Analyze the environmental and societal problems/ issues and will be able to design solutions for the same.
CO3	Evaluate the existing system and to propose practical solutions for the same for sustainable development.

Total Hours	:	30 P	SEE Duration	: 02 Hrs
Unit-I				14 Hrs
Drill: Foot Drill- Drill ki Aam Hidayaten, Word ki Command, Savdhan, Vishram, Aram Se, Murdna, Kadvar Sizing, Teen Line Banana, Khuli Line, Nikat Line, Khade Khade Salute Karna				
Unit – II				06 Hrs
Weapon Training (WT): Introduction & Characteristics of 7.62 Self Loading rifle, Identification of rifle parts				
Unit –III				06 Hrs
Adventure activities: Trekking and obstacle course				
Unit –IV				04 Hrs
Social Service and Community Development (SSCD): Students will participate in various activities throughout the semester e.g., Blood donation Camp, Swachhata Abhiyan, Constitution Day, All National Festival				

Course Outcomes: After completing the course, the students will be able to: -	
CO1	Understand that drill as the foundation for discipline and to command a group for common goal.
CO2	Understand the importance of a weapon its detailed safety precautions necessary for prevention of accidents and identifying the parts of weapon.
CO3	Understand that trekking will connect human with nature and cross the obstacles to experience army way of life.
CO4	Understand the various social issues and their impact on social life, Develop the sense of self-less social service for better social & community life.

UNIVERSAL HUMAN VALUES
Category: PROFESSIONAL COURSE
(Theory)

Course Code	:	HS248AT	CIE	:	50 Marks
Credits: L:T:P	:	2:0:0	SEE	:	50 Marks
Total Hours	:	28L	SEE Duration	:	2.00 Hours

Unit-I

10 Hrs

Course Introduction - Need, Basic Guidelines, Content and Process for Value Education: Purpose and motivation for the course, recapitulation from Universal Human Values-I, Self-Exploration 'Natural Acceptance' and Experiential Validation Continuous Happiness and Prosperity- Human Aspirations, Right understanding, Relationship and Physical Facility, Understanding Happiness and Prosperity correctly.

Practice sessions to discuss natural acceptance in human being as the innate acceptance for living with responsibility.

Understanding Harmony in the Human Being - Harmony in Myself!: Understanding human being as a co-existence of the sentient 'I' and the material 'Body', Understanding the needs of Self ('I') and 'Body' Understanding the Body as an instrument of Understanding the characteristics and activities of 'I' and harmony in 'I', Understanding the harmony of I with the Body: Sanyam and Health;

Practice sessions to discuss the role others have played in making material goods available to me. Identifying from one's own life.

Unit – II

10 Hrs

Understanding Harmony in the Family and Society- Harmony in Human Human Relationship: Understanding values in human-human relationship; meaning of Justice and program for its fulfilment to ensure mutual happiness; Trust and Respect as the foundational values of relationship, Understanding the meaning of Trust.

Understanding the harmony in the society (society being an extension of family): Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals, Visualizing a universal harmonious order in society- Undivided Society, Universal Order- from family to world family.

Practice sessions to reflect on relationships in family, hostel and institute as extended family, real life examples, teacher-student relationship, goal of education etc. Gratitude as a universal value in relationships. Discuss with scenarios. Elicit examples from students' lives

Unit –III

08 Hrs

Understanding Harmony in the Nature and Existence - Whole existence as Coexistence: Understanding the harmony in the Nature, Interconnectedness and mutual fulfilment among the four orders of nature recyclability and self-regulation in nature, Understanding Existence as Co-existence of mutually interacting units in all pervasive space, Holistic perception of harmony at all levels of existence.

Practice sessions to discuss human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc.

Course Outcomes: After completion of the course the students will be able to

CO1	Become more aware of themselves, and their surroundings (family, society, nature); they would become more responsible in life, and in handling problems with sustainable solutions,
CO2	Understand human relationships and human nature in mind so that they will have better critical ability.
CO3	Become sensitive to their commitment towards what they have understood (human values, human relationship and human society).
CO4	Apply what they have learnt to their own self in different day-to-day settings in real life.

5	Small is Beautiful, E. F Schumacher, 1 st Edition, 2011, (PBD)VINTAGE, ISBN: 9780099225614.

ASSESSMENT AND EVALUATION PATTERN

This is a compulsory credit course. The assessment is to provide a fair state of development of the student, so participation in classroom discussions, self-assessment, peer assessment etc. will be used in evaluation. Example: Assessment by faculty mentor: 10 marks Self-assessment: 10 marks Assessment by peers: 10 marks Socially relevant project/Group Activities/Assignments: 20 marks Semester End Examination: 50 marks. The overall pass percentage is 40%. In case the student fails, he/she must repeat the course.

RUBRIC FOR SEMESTER END EXAMINATION (THEORY)

Semester: IV

Bridge Course: MATHEMATICS

Category : AUDIT COURSE

(Common to all Programs)

Course Code	:	MAT149DT		CIE	:	50 Marks
Credits: L: T: P	:	2:0:0		SEE	:	NO SEE (AUDIT COURSE)
Total Hours	:	30L				

Unit-I

10 Hrs

Multivariable Calculus:

Partial Differentiation: Introduction, simple problems. Total derivative, composite functions. Jacobians – simple problems.

Vector Differentiation: Introduction, velocity and acceleration, gradient, divergence – solenoidal vector function, curl – irrotational vector function and Laplacian, simple problems.

Unit – II

10 Hrs

Differential Equations:

Higher order linear differential equations with constant coefficients, solution of homogeneous equations - Complementary functions. Non-homogeneous equations – Inverse differential operator method of finding particular integral based on input function (force function).

Unit –III

10 Hrs

Numerical Methods:

Solution of algebraic and transcendental equations – Intermediate value property, Newton-Raphson method. Solution of first order ordinary differential equations – Taylor series and 4th order Runge-Kutta methods. Numerical integration – Simpson's 1/3rd, 3/8th and Weddle's rules. (All methods without proof).

Course Outcomes: After completing the course, the students will be able to

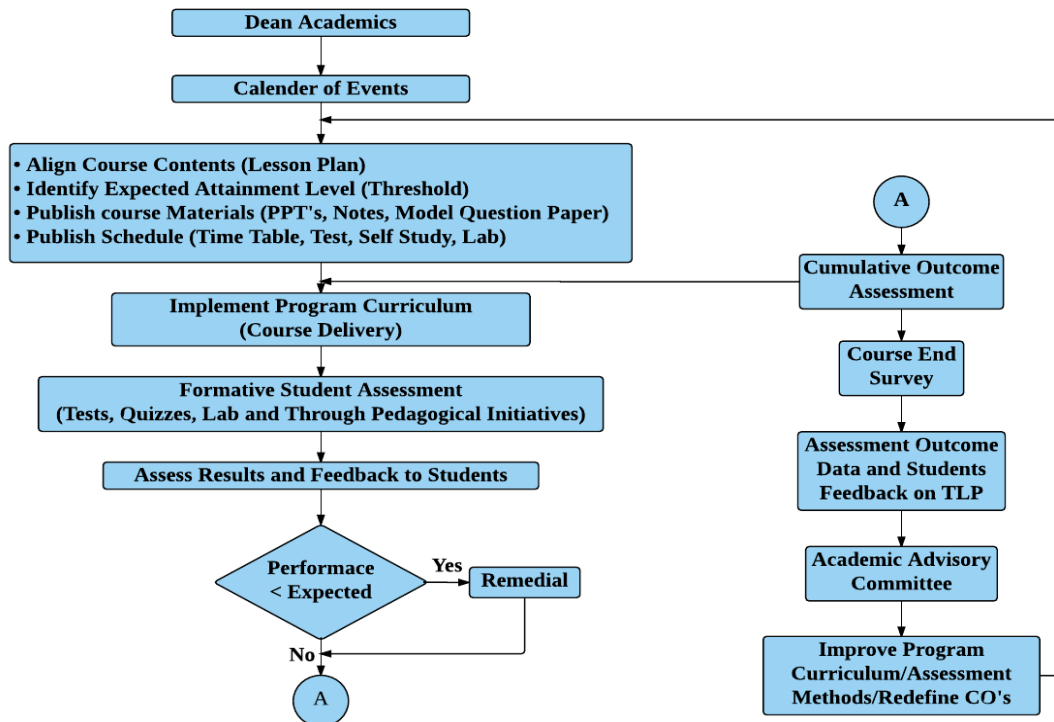

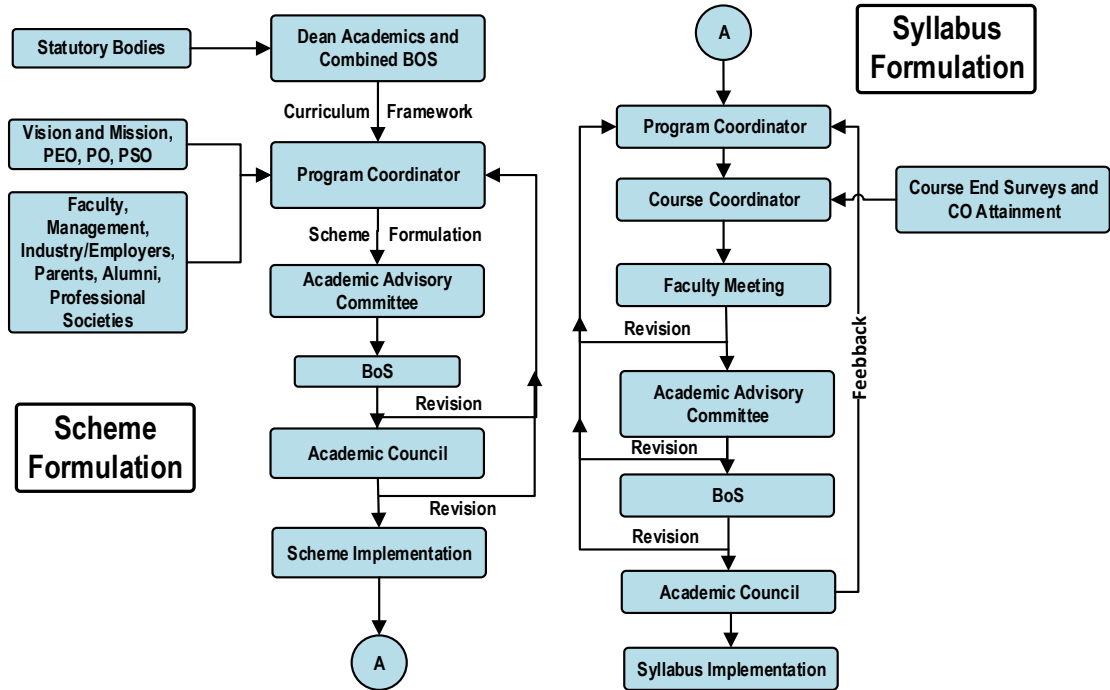

CO1:	Illustrate the fundamental concepts of partial differentiation, vector differentiation, higher order linear differential equations and numerical methods.
CO2:	Derive the solution by applying the acquired knowledge of differential calculus, differential equations, velocity, and acceleration vectors to the problems of engineering applications.
CO3:	Evaluate the solution of the problems using appropriate techniques of differential calculus, vector differentiation, differential equations, and numerical methods.
CO4:	Compile the overall knowledge of differential calculus, vector differentiation, differential equations and numerical methods gained to engage in life – long learning.

PROGRAM OUTCOMES (POs)

- 1. Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation for the solution of complex engineering problems.
- 2. Problem analysis:** Identify, formulate, research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- 3. Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety, and cultural, societal, and environmental considerations.
- 4. Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- 5. Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modelling to complex engineering activities, with an understanding of the limitations.
- 6. The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- 7. Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- 8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- 9. Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- 10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with the society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- 11. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- 12. Life-long learning:** Recognise the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
