R.V.COLLEGE OF ENGINEERING

(Autonomous Institution Affiliated to VTU, Belagavi)

R.V. Vidyaniketan Post, Mysore Road

Bengaluru – 560 059

Bachelor of Engineering (B.E.)

Scheme and Syllabus for III & IV Semesters

2016 SCHEME

CIVIL ENGINEERING

Department Vision

Excel in Education, Research and Consultancy in Civil Engineering with emphasis on Sustainable Development

Department Mission

- Disseminating and integrating the knowledge of civil engineering and allied fields.
- Enhancing industry-institute interaction leading to interdisciplinary research.
- Imbibing wide-range of skills in cutting-edge technology for sustainable development.
- Motivate entrepreneurship and professional ethics to serve the society.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

PEO1: Successfully address technological and managerial challenges.

PEO2: Professionally design and execute Civil Engineering projects.

PEO3: Pursue advanced education, research and continue life-long learning process to remain active professionals.

PEO4: Play key roles in addressing societal needs through interdisciplinary approach.

PROGRAM SPECIFIC OUTCOMES (PSOs)

PSO	Description
PSO1	Apply knowledge of fundamental aspects to analyze and design civil engineering structures
PSO2	Provide sustainable solutions to civil engineering problems
PSO3	Employ codal provisions to arrive at comprehensive solutions to address societal needs
PSO4	Exhibit communication and teamwork skills

Lead Society: American Society of Civil Engineers (ASCE)

Semester: III		
APPLIED MATHEMATICS – III **(Theory)** **(Common to AS, BT, CH, CV, IM, ME)**		
Course Code:16MA31C		**CIE Marks: 100**
Credits: L:T:P:S: 3:1:0:0		**SEE Marks: 100**
Hours: 36L+12T		**SEE Duration: 3Hrs**

Course Learning Objectives:

1	Identify and solve initial value problems, physically interpret the solution, using Laplace Transforms and Inverse Laplace transforms.
2	Evaluate extremal of integrals involving functionals with applications to physical situations.
3	Understand the basics of Matrix theory, Eigen values and Eigen vectors, its applications for finding solution of system of linear equations.
4	Analyse the given set of experimental data and fit suitable approximating curves.

UNIT-I	
Laplace Transform: Existence and uniqueness of Laplace Transform (LT), Transform of elementary functions, RoC. Properties of LT : Linearity, change of scale and first shifting. Transform of function multiplied by t^n, division by t, derivatives and integral. LT of periodic function, Heaviside unit step function, Unit impulse function. Heaviside shift (second shift) theorem.	**07 Hrs**
UNIT-II	
Inverse Laplace Transform: Definition, properties of inverse Laplace transform, evaluation using different methods. Convolution theorem, problems. Application to solve ordinary linear differential equations and simultaneous differential equations.	**07 Hrs**
UNIT-III	
Calculus of Variation: Introduction of variation of functions, extremal of a functional, Euler's equation-special cases-problems. Geodesics-problems, Hanging cable problem, Brachistochrome problem.	**07Hrs**
UNIT-IV	
Linear Algebra: Rank of matrices-rank of matrix by Echelon form, consistency of system of linear equations- homogeneous and non-homogeneous equations, Gauss elimination, Gauss Jordan, Gauss Seidel methods, Eigen values and Eigen vectors-properties, largest Eigen value by Power method.	**08 Hrs**
UNIT-V	
Statistics: Curve fitting by method of least squares, fitting of curves-linear, parabolic, exponential, power functions, correlation, regression analysis – problems.	**07 Hrs**

Course Outcomes: After completing the course, the students will be able to	
CO1:	Understand the fundamental concepts of Laplace and inverse Laplace transforms, variation of functions, elementary transformation of matrices, method of least squares.
CO2:	Demonstrate the properties of Laplace and inverse Laplace transforms, knowledge of extremal of functional, Eigen values, Eigen vectors and correlation.
CO3:	Apply Laplace and inverse Laplace transform technique to solve differential equations, Euler's equation to solve variational problems, matrix methods to solve system of linear equations, regression analysis for curve fitting.
CO4:	Analyse and interpret- solution of IVP and BVP, solution of functionals, solution of linear systems, statistical data occurring in Engineering problems.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and Assignment. A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 60. The marks component for assignment is 10. The total marks of CIE are 100.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marksis executed by means of an examination. The Question paper for each course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Semester: III		
ENGINEERING MATERIALS (Theory)		
Course Code:16EM32A		**CIE Marks: 50**
Credits: L:T:P:S: 2:0:0:0		**SEE Marks: 50**
Hours: 24L		**SEE Duration: 2 Hrs**

Course Learning Objectives: The students will be able to	
1	Understand the behaviour and properties of Engineering materials
2	Recognize various types of engineering materials used in construction industry
3	Compare behaviour of various engineering materials in construction industry
4	Describe properties of engineering materials in civil engineering

UNIT-I	
Stones: Physical properties of minerals, major rock forming minerals, occurrence and use of minerals. Introduction to major rock types (Igneous, sedimentary and metamorphic rocks); their genesis, classification and structures; Engineering properties of rocks, advantages and disadvantages of different rock types at constructions sites. Common building stones in India and its uses.	**05 Hrs**
UNIT-II	
Coarse and Fine Aggregates: Properties of Coarse and Fine Aggregates, Source of sand , classification of Coarse and Fine Aggregates ,bulking of sand, properties of good Coarse and Fine Aggregates.	**05 Hrs**
UNIT-III	
Timber, Classification of timber, qualities of good timber, common timbers used for building work, Types of plywood **Building blocks**, Bricks, concrete block. and hollow concrete block types, manufacturing process, properties, classification..	**05 Hrs**
UNIT-IV	
Metals: Types and properties of Steels – Manufacturing process of steel – Advantages of new alloy steels – Properties and advantages of aluminium.	**04 Hrs**
UNIT-V	
Materials: Clay products, ceramics –Refractories Fibre Textiles – Geosynthetics for Civil Engineering applications, Polymers in Civil Engineering, Recycling of waste material as building material	**05 Hrs**

Course Outcomes: After completing the course, the students will be able to	
CO1:	Explain the properties of engineering materials
CO2:	Select suitable various types of engineering materials to be used in construction industry
CO3:	Examine the behaviour of various engineering materials in construction industry
CO4:	Illustrate the properties of engineering materials in civil engineering

Semester: III		
STRENGTH OF MATERIALS (Theory)		
Course Code:16CV33		**CIE Marks: 100+50**
Credits: L:T:P:S: 3:0:1:0		**SEE Marks: 100+50**
Hours: 36L+1P		**SEE Duration: 3 Hrs+3 Hrs**

Course Learning Objectives: The students will be able to	
1	Determine the two dimensional stress systems and analyze the Shear force and bending moment for beam elements
2	Evaluate the behaviour of column and strut under compression
3	Compare the behaviour of solid and hollow shaft under various loading condition
4	Examine the mechanical properties of various materials under tensile, compressive, torsion and impact loading

UNIT-I	
Bending moment and shear force: shear force and Bending moment for Statically determinate beams,, Sign conventions, Relationship between loading, shear force and bending moment. S.F and B M diagrams for cantilever, simply supported and over hanging beams subjected to point load, UDL, UVL, moment, Couple and combinations - Numerical problems.	**07 Hrs**
UNIT-II	
Bending stress and shear stress in beams: Introduction, Assumptions in simple bending theory, Derivation of Bernoulli's equation, modulus of rupture, section modulus, flexural rigidity, expression for horizontal shear stress in beam, variation of bending stress and shear stress diagram for cross-sections-rectangular, T and I sections - Numerical problems.	**07 Hrs**
UNIT-III	
Deflection of determinate Beams: Introduction, Elastic curve –Derivation of differential equation of flexure, Sign convention, Slope and deflection using double integration method and Macaulay's method for beams subjected to point loads ,UDL, moment, couple and their combinations. Numerical problems.	**07 Hrs**
UNIT-IV	
Analysis of columns and struts: Introduction, short and long columns, radius of gyration, slenderness ratio, buckling load, effective length, Euler's theory of columns, Derivation of Euler's Buckling load for columns with different end conditions, Limitations of Euler's theory, Rankine's formula. Numerical problems on solid and hollow column section.	**07 Hrs**
UNIT-V	
Two Dimensional Stress Systems: Introduction, Stress components on inclined planes, Principal Stresses, principal planes- Analytical and Mohr's circle methods of stress computations - Numerical problems. Temperature Stresses of homogeneous materials – Numerical problems. **Torsion:** Assumptions in theory of pure torsion, Torsion equation, Torsional rigidity and modulus of rupture, power transmitted, Comparison of solid and hollow circular shafts. Numerical problems.	**08 Hrs**
Laboratory	
1. Dimensionality of bricks, Water absorption, Initial rate of absorption 2. Fineness modulus of Fine and Coarse aggregate 3. Compressive strength tests on building blocks (brick, solid blocks and hollow blocks)	

4. Tension test on Mild steel and HYSD bars 5. Compression test on HYSD, Cast iron 6. Torsion test on Mild Steel circular sections – solid sections. 7. Bending Test on Wood under two point loading. 8. Shear Test on Mild steel – single and double shear 9. Impact test on Mild Steel (Charpy&Izod) 10. Vickers Hardness tests	

Course Outcomes: After completing the course, the students will be able to	
CO1:	Illustrate the mechanical behaviour of various elements
CO2:	Apply the basic concepts of mechanics in determining the stress developed in the materials
CO3:	Evaluate the behaviour of materials under various loading condition
CO4:	Examine the mechanical properties of various materials under different loading conditions

Semester: III		
CONCRETE TECHNOLOGY (Theory)		
Course Code:16CV34		**CIE Marks: 100+50**
Credits: L:T:P:S: 3:0:1:1		**SEE Marks: 100+50**
Hours: 35L+1P+1S		**SEE Duration: 3Hrs + 3 Hrs**
Course Learning Objectives: The students will be able to		
1	Outline the manufacturing and types of cements and concrete and its application.	
2	Assess the methods of measuring properties of concrete	
3	Describe various strength of concretes and enhancing the properties of concrete using admixture	
4	Analyze the methods of mix proportion and importance of ready mix concrete	

UNIT-I	
Cement: Manufacturing of cement (dry and wet process), Hydraulic Cement, Bogue's compounds, Types of cement, Hydration, product of hydration and its importance, importance of water cement ratio, Transition zone, brief description of field and laboratory testing of cement. Water and its Quality, Gel space ratio (Numerical problems)	**07 Hrs**
UNIT-II	
Concrete: Manufacturing Concrete: Mixing, Transporting, Placing, Compaction and Curing, Segregation, Bleeding. Workability: Factors affecting workability, Measurement by various tests, Recommendations of IS: 456-2000 - Sampling procedure, Acceptance criteria.	**07 Hrs**
UNIT-III	
Admixtures: Chemical admixtures. Action of plasticizers, Water reducers, super plasticizers, accelerators, retarders, air entraining admixtures. Mineral admixtures: GGBS, fly ash, metakaolin, silica fume Significance of Durability in concrete – Cracking, chemical attack, Alkali aggregate reaction, Permeability, water absorption, Sorptivity.	**07 Hrs**
UNIT-IV	
Strength Compressive Strength Factors affecting, Abrams' law, Importance of Strength development with age, Maturity concept (Numerical Problems), accelerated curing, Relation between compressive and tensile strength, Flexural strength, Methods of finding the strength. Importance of Non-destructive tests, Rebound hammer test, Ultra sonic pulse velocity test. Procedure to conduct tests – Penetration and pull out test	**07 Hrs**
UNIT-V	
Concrete mix Design: Significance and objectives of concrete mix proportioning, General Considerations, Mix proportioning using IS 10262 : 2009 method (Numerical problems) **RMC**-Advantages, components of RMC plant, Concrete specifications, Distribution and transport, Conditions of sale and product liability.	**07 Hrs**
Experiential learning	
Compatibility of cement and admixture, Bulking of sand Different types of concrete,	
Laboratory	
1. Bulking of sand and water absorption of coarse aggregate. 2. Specific gravity of cement, Fine and Coarse aggregate 3. Consistency of Cement, Initial and final setting time of cement, 4. Compressive Strength of cement 5. Mix Design and Workability tests on fresh concrete (Slump Test, Compaction Factor Test and Vee-Bee consistometer) 6. Tests on Hardened concrete Properties(Compressive Strength, Split Tensile Strength) 7. Demonstration Experiment • Soundness test • Flexural Strength • Flow test on cement mortar • Non Destructive Testing of concrete	

Course Outcomes: After completing the course, the students will be able to	
CO1:	Understand the properties of cement and concrete
CO2:	Assess the quality of ingredients of concrete
CO3:	Identify the concrete for specific application
CO4:	Proportion the concrete mix for a particular requirement

Semester: III		
FLUID MECHANICS (Theory)		
Course Code:16CV35		**CIE Marks: 100+50**
Credits: L:T:P:S: 3:0:1:1		**SEE Marks: 100+50**
Hours: 36L+1P+1S		**SEE Duration: 3Hrs + 3 Hrs**
Course Learning Objectives: The students will be able to		
1	Describe fundamental properties of fluids and its applications.	
2	Analyze hydrostatic laws and its applications to solve practical problem.	
3	Apply the principles of Kinematics and Hydro-Dynamics for practical applications	
4	Examine basic flow rate measurement techniques.	

UNIT-I	
Fluid Properties: Definition of fluid properties and fluid characterization for its usage. **Fluid Pressure and its measurement:** Pascal's Law, Variation of pressure in fluids; Absolute and Gauge pressure and their relationship; Measurement of pressure using simple and differential Manometer, Numerical problems. **Hydrostatic Forces on surfaces:** Calculation of Force on submerged planes (vertical and inclined planes), Definition of Centre of pressure and its determination.	**08 Hrs**
UNIT-II	
Kinematics of fluid flow: Classification of flows; Steady and unsteady, uniform and non-uniform, laminar and Turbulent- Rotational and Irrotational flow. **Dynamics of fluid flow:** Laws of Mass, Energy and Momentum, continuity equation (one dimensional), Euler's equation, Bernoulli's equation, modified Bernoulli's equation limitations and its application, Numerical problems.	**07 Hrs**
UNIT-III	
Flow through pipes: Major loss, minor loss, Darcy-Weisbach Equation, Hydraulic gradient line, Total Energy Line. Series and parallel network of pipes, numerical problems. **Orifice and mouth piece:** Hydraulic coefficients, concept of orifice and mouth piece (no numerical problems). **Notches and Weirs:** Definition of Notch, Weir, Flow through V-notch, Rectangular weir, corrections for velocity of approach, end contractions, Cippoletti weir, Notch Sensitivity, numerical problems.	**07 Hrs**
UNIT-IV	
Flow through Open Channel: Calculation of velocity using Chezy and Manning's experiments, Hydraulic efficient channels: Rectangular and Trapezoidal channel, numerical problems. Specific energy, critical depth, Froude's number, specific Energy diagram, subcritical and supercritical flows, Alternative depths, Hydraulic jump, numerical problems.	**07 Hrs**
UNIT-V	
Impact of Jet on Vanes: Impact of Jet on Vanes on straight & curved vane without & with motion. Velocity triangles, its application in vane analysis numerical problems.	**07 Hrs**
Laboratory	
1. Calibration of 90^0 V-notch 2. Calibration of Rectangular notch 3. Calibration of Cippoletti notch 4. Calibration of Ogee weir 5. Calibration of Venturimeter 6. Calibration of Orificemeter 7. Calibration of water meter 8. Determination of Hydraulic coefficients for orifice. 9. Determination of Hydraulic coefficients for Mouthpiece.	

10. Determination of friction factor for a pipe. 11. Impact of jet on vanes 12. Determination of loss of energy in sudden expansion, contraction and Bends in a pipe.	

Course Outcomes: After completing the course, the students will be able to	
CO1:	Describe the different properties of fluids, for the flow characterization and measurements.
CO2:	Explain the behavior of the fluids under static and dynamic conditions.
CO3:	Apply continuity equation and energy equation in solving problems on flow through conduits.
CO4:	Distinguish and examine various flow measuring techniques.

CIE is executed by way of quizzes (Q), tests (T) and Self-Study(S). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for Self-study is 20. The total CIE for theory is 100.

Laboratory- 50 Marks

The Laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average of marks over number of weeks is considered for 40 marks. At the end of the semester a test is conducted for 10 marks. Total marks for the laboratory is 50.

Semester End Evaluation (SEE): Total marks: 100+50=150

Theory – 100 Marks

SEE for 100 marksis executed by means of an examination. The Question paper for each course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Laboratory- 50 Marks

Experiment Conduction with proper results is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

Semester: III		
WATER SUPPLY AND TREATMENT ENGINEERING (Theory)		
Course Code:16CV36		**CIE Marks: 100**
Credits: L:T:P:S: 3:0:0:1		**SEE Marks: 100**
Hours: 36L+1S		**SEE Duration: 3Hrs**

Course Learning Objectives: The students will be able to	
1	To analyze the variation of water demand and to estimate water requirement for a community
2	To evaluate the sources and conveyance systems for raw and treated water
3	To study drinking water quality standards and to illustrate qualitative analysis of water
4	To design physical, chemical and biological treatment methods to ensure safe and potable water Supply

UNIT-I	
Introduction: Human activities and environmental pollution, Requirement of water for various beneficial uses. Need for protected water supply. **Demand of Water**: Types of water demands -domestic demand, institutional and commercial, public use, fire demand. Factors affecting percapita demand. Population forecasting - different methods with merits and demerits. Variations in demand of water. Peak factor, Design period and factors governing design period. Numerical problems.	**07 Hrs**
UNIT-II	
Quality of Water: Objectives of water quality management, Concept of safe water, wholesomeness and palatability.Waterborne, water based, water washed and vector diseases. **Examination of Water**:- Sampling - Objectives, Methods, Preservation techniques. Physical, Chemical and Microbiological Examinations, (IS: 3025and IS: 1622) using analytical & Instrumental techniques. Drinking water BIS, ICMR standards & WHO guidelines, Health significance of Fluoride, Nitrates, Hardness and Heavy metals like Mercury and Cadmium. **Sources:** surface and subsurface sources -suitability with regard to quality and quantity.	**06 Hrs**
UNIT-III	
Collection and Conveyance of Water: Intake structures -different types of intakes – river, canal and reservoir intake. Design of the economical diameter for the rising main; Pipe appurtenances. Pipe materials: different materials with advantages and disadvantages. **Pumps:** Types of pumps with working principles. Numerical Problems**.** **Water Treatment:** Objectives, Treatment flow chart – significance of each unit	**07 Hrs**
UNIT-IV	
Aeration : Principle of working and types of aerators, Design of cascade aerator **Screening:** Types and design of bar screen. **Sedimentation** -theory, settling tanks, types, design. **Coagulation aided sedimentation**-types of coagulants, chemical feeding, flash mixing, flocculators -design of all units **Filtration:** mechanism -theory of filtration, types of filters, slow sand, rapid sand and pressure filters including construction, operation, cleaning. Design of slow and rapid sand filter without under drainage system.	**08 Hrs**
UNIT-V	
Disinfection: Theory of disinfection, methods of disinfection, chlorination, chlorine demand, residual chlorine, break point chlorination. **Miscellaneous Treatment**: Softening, Fluoridation and De-fluoridation, Activated carbon treatment. **Distribution system:** Methods- Gravity, Pumping, Combined gravity and pumping system. Layouts: Dead end, Radial, Grid iron, Circular system.	**08 Hrs**

Network analysis in distribution system – Hardy cross method, Hazen- Williams formula.	

Course Outcomes: After completing the course, students will be able to	
CO1:	Estimate average and peak water demand for a community.
CO2:	Evaluate available sources of water, quantitatively and qualitatively and make appropriate choice for a community.
CO3:	Evaluate water quality and environmental significance of various parameters and plan suitable treatment system.
CO4:	Design a comprehensive water treatment and distribution system to purify and distribute water to the required quality standards.

Semester: III		
BRIDGE COURSE MATHEMATICS I / II		
Course Code:16MA37/48		**CIE Marks: 100**
Credits: L:T:P:S: 2:0:0:0 (Audit Course)		**SEE Marks: 100**
Audit Course		**SEE Duration: 03Hrs**

Course Learning Objectives: The students will be able to	
1	Understand the existence of polar coordinates as possible 2-D geometry, approximate a function of single variable in terms of infinite series.
2	Gain knowledge of multivariate functions, types of derivatives involved with these functions and their applications.
3	Recognize linear differential equations, apply analytical techniques to compute solutions.
4	Acquire concepts of vector functions, vector fields and differential calculus of vector functions in Cartesian coordinates.
5	Explore the possibility of finding approximate solutions using numerical methods in the absence of analytical solutions of various systems of equations.

Prerequisites :

Hyperbolic functions, Trigonometric formulas, methods of differentiation, methods of integration, reduction formulae, vector algebra.

UNIT-I	
Differential Calculus: Taylor and Maclaurin's series for function of single variable.Partial derivatives – Introduction, simple problems. Total derivative, Composite functions, Jacobian's- simple problems.	**05 Hrs**
UNIT-II	
Multiple Integrals: Evaluation of double and triple integrals – direct problems, change of order in double integral, change of variables to polar, cylindrical and spherical coordinate systems.	**05 Hrs**
UNIT-III	
Differential Equations: Higher order linear differential equations with constant coefficients, Complementary function and Particular integral, problems. Equations with variable coefficients – Cauchy and Legendre differential equations, problems.	**06 Hrs**
UNIT-IV	
Vector Differentiation: Introduction, simple problems in terms of velocity and acceleration. Concepts of Gradient, Divergence- solenoidal vector function, Curl- irrotational vector function and Laplacian, simple problems.	**05 Hrs**
UNIT-V	
Numerical Methods: Algebraic and transcendental equations – Regula-Falsi method, Newton-Raphson method. Ordinary Differential Equations – Taylor's, modified Euler's and 4^{th} order Runge-Kutta methods. Numerical Integration – Simpson's $1/3^{rd}$, $3/8^{th}$ and Weddle's rules.	**05 Hrs**

Course Outcomes: After completing the course, the students will be able to	
CO1:	Demonstrate the understanding of the basics of polar coordinates, partial differentiation, multiple integrals, vector differentiation, classification and types of solutions of higher order linear differential equations, requirement of numerical methods and few basic definitions.
CO2:	Solve problems on total derivatives of implicit functions, double integrals by changing order of integration, homogeneous linear differential equations, velocity and acceleration vectors.
CO3:	Apply acquired knowledge to find infinite series form of functions, multiple integrals by changing order, solution of non-homogeneous linear differential equations, and numerical solution of equations.
CO4:	Evaluate multiple integrals by changing variables, different operations using del operator and numerical solutions of differential equations and numerical integration.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE consists of Two Tests each for 50 marks (20 marks for Quiz + 30 marks for descriptive questions)

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for each course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from each unit have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

IV- Semester		
APPLIED MATHEMATICS – IV (AS, CH, CV, ME)		
Course Code:16MA41C		**CIE Marks: 100**
Credits: L:T:P:S: 3:1:0:0		**SEE Marks: 100**
Hours: 36L+12T		**SEE Duration: 3Hrs**

Course Learning Objectives:

1	Analyze the periodic phenomena using the concept of Fourier series.
2	Compute the solution of linear partial differential equations that arise in physical situations.
3	Evaluate the approximate solutions of partial differential equations using numerical methods.
4	Use probability to solve random physical phenomena and implement the proper distribution model.

UNIT-I	
Fourier Series: Introduction to periodic functions-even, odd functions, properties. Special wave forms-square wave, half wave rectifier, saw-tooth wave, triangular wave. Dirichlet conditions for Fourier series, Fourier series expansion of continuous and discontinuous functions. Half range-sine and cosine series. Complex Fourier series-problems.	**07 Hrs**
UNIT-II	
Partial Differential Equations – I: Formation of partial differential equations by elimination of arbitrary constants/functions, solution of Lagrange's linear equation. Solution of partial differential equations by method of separation of variables. Solution of Wave and Heat equations in one dimension and Laplace equation in two dimensions by the method of separation of variables - problems.	**08 Hrs**
UNIT-III	
Partial Differential Equations – II Classification of second order partial differential equations-parabolic, hyperbolic, elliptic. Finite difference approximation to derivatives. Solution of Laplace equation in two dimension, Heat and wave equations in one dimension (explicit methods).	**07 Hrs**
UNIT-IV	
Probability and Distributions: Baye's rule, random variables-discrete and continuous. Probability distribution function, cumulative distribution function. Binomial, Poisson, Exponential and Normal Distributions.	**07 Hrs**
UNIT-V	
Joint Probability Distribution and Markov Chain: Joint Distribution of random variables-Expectation, Co-variance and Correlation. Markov chain-Stochastic matrices, Regular stochastic matrices. Probability vector, Higher dimension probabilities.	**07 Hrs**

Course Outcomes: After completing the course, the students will be able to

CO1:	Understand - the fundamental concepts of periodic phenomena, formation and classification of PDEs, basics of probability.
CO2:	Demonstrate - the concept of Dirichlet's condition to obtain Fourier series of continuous and discontinuous functions, finite differences for partial derivatives, random variables to describe probability functions.
CO3:	Apply - Euler's formula to obtain half range series, method of separation of variables to solve PDE's, probability and distribution to un-deterministic situations.

CO4:	Analyze and interpret - complex Fourier series, PDEs, and various distributions occurring in Engineering problems.

Semester: III/IV		
ENVIRONMENTAL TECHNOLOGY (Theory)		
Course Code:16ET32/16ET42		**CIE Marks: 50**
Credits: L:T:P:S: 2:0:0:0		**SEE Marks: 50**
Hours: 25L		**SEE Duration: 02Hrs**
Course Learning Objectives: The students will be able to		
1	Understand the various components of environment and the significance of the sustainability of healthy environment.	
2	Recognize the implications of different types of the wastes produced by natural and anthropogenic activity.	
3	Learn the strategies to recover the energy from the waste.	
4	Design the models that help mitigate or prevent the negative impact of proposed activity on the environment	

UNIT-I	
Introduction: Ecosystem – Types and structure of ecosystem. Components of environment, Environmental education, Environmental act & regulations. Global environmental issues, ISO 14000, Environmental Impact Assessment and Challenges.	**05 Hrs**
UNIT II	
Environmental pollution: Causes, effects and control measures of Air, noise and land pollution. Air Pollution. Clean air act, Pollution standard index. Indoor air quality. Global atmospheric change - Global warming, Acid rain &Ozone depletion and their controlling measures.	**05 Hrs**
UNIT III	
Water pollution and management: Pollutants in surface & ground water, water borne diseases. Water purification systems: physical & chemical treatment - aeration, solids separation, settling operations, coagulation, softening, filtration, disinfection, The common technologies for purification of drinking water - Ultraviolet radiation treatment, Reverse Osmosis. Rain water harvesting, water recycling, STP plant.	**05 Hrs**
UNIT IV	
Renewable energy sources and technology for generation of energy: Different types of energy, conventional sources &non conventional sources of energy, solar energy, wind energy, hydro electric energy, Geothermal Energy, Nuclear energy, Fossil Fuels & Biomass energy.	**05 Hrs**
UNIT V	
Solid waste management: Types, causes, control and processing. Typical generation rates, estimation of solid waste quantities, factors that affect generation rates. Management - On site handling, collection, storage and processing techniques, ultimate disposal, landfills. Reduction and recycling of waste – waste to composite, energy.	**05 Hrs**

Course Outcomes: After completing the course, the students will be able to	
CO1	Identify the components of environment and exemplify the detrimental impact of anthropogenic activities on the environment.
CO2	Differentiate the various types of wastes and suggest appropriate safe technological methods to manage the waste.
CO3	Aware of different renewable energy resources and can analyse the nature of waste and propose methods to extract clean energy.
CO4	Adopt the appropriate recovering methods to recover the essential resources from the wastes for reuse or recycling.

Semester: IV		
THEORY OF STRUCTURES (Theory)		
Course Code:16CV43		**CIE Marks: 100**
Credits: L:T:P:S: 3:0:0:1		**SEE Marks: 100**
Hours: 36L+1S		**SEE Duration: 3Hrs**

Course Learning Objectives: The students will be able to	
1	Identify and Distinguish different forms of structures.
2	Understand the basic concepts of static and dynamic behaviour of structural system.
3	Analyse determinate and indeterminate structures for unknown forces and deformation.
4	Evaluate the behaviour of beams truss arches and cables under different loading condition using force or deformation methods.

UNIT-I	
Structural Systems: Forms of Structures**,** Conditions of equilibrium, Degrees of Freedom. Linear and Non Linear Structures, 1D, 2D and 3D, Structures. Determinate & Indeterminate Structures, Static and Kinematical indeterminacy. **Concept of Vibration & Simple Harmonic Motion:** Derivation of Equation of motion for SDOF (Single Degree of Freedom) –Undammed. Numerical examples on SDOF. **Analysis of Plane Trusses:** Introduction, Assumptions, Analysis by Method of Joints, Analysis by Method of sections.	**08 Hrs**
UNIT-II	
Deflection of Beams: Moment Area Method – Simply supported beams, Cantilever Beam, and Over hanging**,** Conjugate beam Method – Simply supported beams, Cantilever Beam, and Over hanging beams.	**07 Hrs**
UNIT-III	
Three Hinged Arches: Introduction**,** Three Hinged Parabolic Arches at Same levels and different levels**,** Determination of Normal thrust, Radial Shear and bending moment (parabolic arches only) - Problems. **Suspension Cables**: Analysis of Cables at Same levels and different levels – Numerical problems.	**07 Hrs**
UNIT-IV	
Energy Theorems: Introduction: Strain energy in linear elastic system, expression of strain energy due to axial load, Bending moment and shear force – Castigliano's first theorem- Deflection of simple beams and pin jointed trusses.	**07 Hrs**
UNIT-V	
Analysis of Beams: **Consistent deformation method**: Introduction**,** Analysis of Propped Cantilever**,** Analysis of Fixed Beams**.** **Slope Deflection Method**: Introduction; Derivation of Slope-Deflection equations for beams. Analysis of Continuous beam by Slope –Deflection Equations (for beams only)	**07 Hrs**

Course Outcomes: After completing the course, the students will be able to	
CO1:	Classify different forms of structures and illustrate their basic structural properties.
CO2:	Apply the basic concepts of analysis methods in determining unknown forces in the structures.
CO3:	Analyze the different forms of structural elements by suitable methods of analysis.
CO4:	Evaluate the behavior of structure under various loading conditions.

Semester: IV		
BUILDING CONSTRUCTION AND PLANNING (Theory)		
Course Code:16CV44		**CIE Marks: 100+50**
Credits: L:T:P:S: 3:0:1:1		**SEE Marks: 100+50**
Hours: 36L+1P+1S		**SEE Duration: 3Hrs + 3Hrs**
Course Learning Objectives: The students will be able to		
1	Understand the different building planning and drawing principles and components of a civil engineering structure	
2	Distinguish between different forms and types of masonry	
3	Relate the concepts of shoring, underpinning and scaffolding and design of types of staircases	
4	To gain insights into types of roof, plastering, pointing and painting	
5	Understand the basic concepts Green building construction and construction equipment and their application	

UNIT-I	
Building Planning: Building Bye-laws, drawing requirements, principles of planning, FAR, Carpet Area, Plinth Area (only concepts) **Foundation**: Bearing Capacity of Soil, Safe Bearing Capacity of Soil, Allowable Bearing Capacity of Soil. Classification of Foundation, Masonry footings, Isolated footings, Combined and strap RCC footings, Raft footing, Grillage foundation, Pile foundations (Friction and Load bearing piles), Foundation in black cotton soils	**08 Hrs**
UNIT-II	
Masonry: Load Bearing and partition walls, Stone-Rubble Masonry, Coursed Rubble Masonry, Un-coursed rubble masonry Random rubble masonry, Ashlar Masonry Bricks-Bonds in Brickwork, English Bond , Flemish Bond, Damp Proof construction, Arches, Classification, Functions. **Lintel and Chajja:** Functions and types **Stairs:** Components, Types-Dog legged and open well stairs, Geometrical design of stairs.	**07 Hrs**
UNIT-III	
Shoring: Raking Shores, Flying Shores, Dead Shores, Underpinning- Pit method, Pile method, **Scaffolding**- Components, Types of Scaffolding. **Form work :**Form work Details, RCC columns, Beams, floors, Slip forming **Roofs:** Flat Roof (RCC) Sloped roof (R.C.C. and tile roof), Lean to roof, Wooden truss (King post and queen post trusses).	**07 Hrs**
UNIT-IV	
Types of flooring: (Materials and method of laying), Granolithic, Mosaic Ceramic, Marble, Polished Granite types and applications, Industrial flooring. **Plastering and Pointing**: Purpose, materials and methods of plastering and pointing, defects in plastering-Stucco plastering, lathe plastering. **Painting :**Purpose, Types, Application of paints to new and old surfaces, Distemper Plastic emulsion, Enamel, painting to walls and iron and steel surfaces, polishing wood surface.	**07 Hrs**
UNIT-V	
Construction equipment: Factors for selecting equipment, Introduction, various earth moving equipment's, Hoisting equipment's Concrete mixer and plants, Conveyors and rollers, Trenching machines. **Green building concepts:** Site selection, design concepts, , materials and different certifications programs **(IGBC AND LEED)**	**07 Hrs**

Laboratory	
Using Auto CAD software: Prepare working drawing of components of building like (i) Stepped Wall footing (ii) Fully Paneled and flush doors (iii) Partly Paneled and Partly glazed window. (iv) Doglegged & open well stairs Functional design of buildings (Residential, public and industrial) – orientation and positioning of various components of buildings- Building standards – Bye laws- set back distances-calculation of carpet area, plinth area and FAR. Using Auto-CAD software: Development of Plan, Elevation, section, North Line and Schedule of Openings from the given Line diagram of Residential buildings. (i) Single storey building. (ii) Two Storey building. (iii) Residential Building with Pitched roof.	
Functional design of building using inter connectivity diagrams (bubble diagram), development of line diagram only for following buildings (i) primary health centre (ii) primary school building (iii)college canteen (iv) office building. Using AUTO-CAD software, Preparation of Plumbing, sanitary and electrical layouts for a simple residential building (plan being given).	

Course Outcomes: After completing the course, the students will be able to	
CO1:	Understand the fundamental of building Planning and construction
CO2:	Apply the various techniques and principles of building construction in Civil engineering
CO3:	Analysis different forms types methods of building construction for various building component
CO4:	Use of modern tools like AutoCad for building planning and drawing

Continuous Internal Evaluation (CIE): Total marks: 100+50=150

Theory – 100 Marks

CIE is executed by way of quizzes (Q), tests (T) and Self-Study(S). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of

the marks scored from three tests is reduced to 50. The marks component for Self-study is 20. The total CIE for theory is 100.

Laboratory- 50 Marks

The Laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average of marks over number of weeks is considered for 40 marks. At the end of the semester a test is conducted for 10 marks. Total marks for the laboratory is 50.

Semester End Evaluation (SEE): Total marks: 100+50=150

Theory – 100 Marks

SEE for 100 marksis executed by means of an examination. The Question paper for each course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Laboratory- 50 Marks

Experiment Conduction with proper results is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

Semester: IV		
SURVEYING (Theory)		
Course Code:16CV45		**CIE Marks: 100+50**
Credits: L:T:P:S: 3:0:1:0		**SEE Marks: 100+50**
Hours: 36L+1P		**SEE Duration: 3Hrs + 3 Hrs**

Course Learning Objectives: The students will be able to	
1	Understand the concepts of surveying and levelling.
2	Identify the components of surveying and levelling.
3	Interpret the different measurement techniques for various applications.
4	Apply principles of surveying for solving relevant engineering problems.

UNIT-I	
History of Surveying: Definition of Surveying, Uses of Surveying, Basic principles of surveying, Classification of Surveys, Chain surveying, Compass surveying, Plane table surveying - Accessories required, booking of chain survey work- Field book entries, conventional symbols. Fundamentals of Maps: Maps - types; scales-types; measuring distance; finding direction and use of symbols. Map projection - Latitude, Longitude and time, Topographical survey. Principles of toposheet numbering, Analysis of landforms.	**07 Hrs**
UNIT-II	
Leveling: Principles and basic definitions, Fundamental axes and parts of a dumpy level, types of adjustments and objectives, temporary adjustments of a dumpy level, Types of leveling – Simple leveling, Profile leveling, cross sectioning – fly leveling, Booking of levels – Rise and fall method and height of instrument method – comparison, Arithmetic checks. **Contour Survey:** Contoursand their characteristics, Methods of contouring – direct and indirect methods, Uses of contours.	**07 Hrs**
UNIT-III	
Total Station: Parts of a Total Station – Accessories – Advantages and Applications, Field Procedure for total station survey, data transfer, preparation of maps. **TrignometricLevelling:** Determination of elevation of objects when the base is accessible and inaccessible by single plane and double plane methods.	**07 Hrs**
UNIT-IV	
Curve Setting: Curves- Necessity – types, simple curves – elements – Designation of curves- Methods of setting out simple curves by linear methods and method of Rankine's deflection angle, Compound curve, Reverse Curve.	**08 Hrs**
UNIT-V	
Areas and Volumes: Calculations of area from cross staff surveying. Area calculation by trapezoidal rule and simpsons rules. Computations of volumes by trapezoidal rule and prismoidal rule. **Remote Sensing, GIS & GPS:** Introduction, Principles, Geographical Information System- Definition of GIS, Key Components of GIS, Functions of GIS, Global Positioning system, Applications of Remote Sensing GIS & GPS in Civil Engineering.	**07 Hrs**
Laboratory	
I. Chain Surveying 1. To measure distance between two points using direct ranging and setting out perpendiculars. 2. Marking central line of a building using grid plan using chain and its accessories.	

II. Levelling 3. To determine difference in elevation between two points using differential levelling technique, using height of the instrument method and rise and fall methods. 4. To conduct profile levelling and to draw the longitudinal section and cross section to determine the depth of cut and height of filling for a given formation level using total station.
III. Total station 5. Contour surveying using total station. 6. To determine the elevation of an object. 7. Distance, gradient between two inaccessible points using total station. 8. Traversing using total station.
IV. Curves 9. To set out simple curves using linear methods-perpendicular offsets from long chord and offsets from chord produced methods. 10. To set out compound curves using Rankine's deflection angles method. 11. To set out compound curve by angular method.

Course Outcomes: After completing the course, the students will be able to	
CO1:	Describe fundamental concepts of Surveying, Levelling, total stationand application of remote sensing and GIS.
CO2:	Discuss components of all types of surveying.
CO3:	Apply the concepts of measurements in engineering problems.
CO4:	Demonstrate the applications of remote sensing and GIS for solving engineering problems.

Semester: IV		
WASTEWATER ENGINEERING (Theory)		
Course Code:16CV46		**CIE Marks: 100+50**
Credits: L:T:P:S: 3:0:1:1		**SEE Marks: 100+50**
Hours: 36L+1P+1S		**SEE Duration: 3Hrs + 3 Hrs**
Course Learning Objectives: Students will be able to		
1	To understand the importance and necessity of scientific collection and disposal systems for wastewater.	
2	To analyze flow variation of sewage and storm water and to estimate design flows for a community.	
3	To design suitable conveyance systems for sewage and storm water.	
4	To study physical, chemical and biological characteristics and treatment methods to ensure safe disposal of wastewater.	

UNIT-I	
Introduction: -Necessity of sanitation, types of sewerage systems and their suitability. **Quantity of Sewage:** dry weather flow, factors affecting dry weather flow. Flowvariations and their effects on design of sewerage system; computation of design flow, estimation of storm flow, rational method and empirical formulae for design of storm water drain; Time of concentration, Numerical problems.	**07 Hrs**
UNIT-II	
Design of Sewers. Hydraulic formulae for velocity, effects of flow variations on velocity, self cleansing and non-scouring velocities, Design of hydrau1ic elements for circu1ar sewers flowing full and partially full conditions. Numerical problems. **Sewer Appurtenances:** Inlets**,** catch basins, manholes, storm water regulator, oil and grease traps.	**06 Hrs**
UNIT-III	
Analysis of Sewage: Physical, Chemical and Biological characteristics, concepts of aerobic and anaerobic activity, BOD and COD. Sampling - significance, techniques and frequency. Numerical problems. **Treatment of Sewage.** Flow diagram of municipal sewage treatment plant - Importance of each unit. **Primary treatment-**Screening, Grit chambers, Primary sedimentation tanks –concepts and Design.	**08 Hrs**
UNIT-IV	
Secondary treatment: Trickling filter -theory and operation, types and design. Activated sludge process -principle and flow diagram, methods of aeration, modifications, F/M ratio, design of ASP.	**08 Hrs**
UNIT-V	
Disposal of Effluents. By dilution, self-purification. Phenomenon, oxygen sag curve,zonesof purification, sewage farming, sewage sickness, Disposal standards on land and water body. **Anaerobic sludge digestion-** Principles, digestion tanks, Sludge drying beds. Design. **Miscellaneous Treatment Methods:** Septic tanks and Oxidation Pond –Concept and Design.	**07 Hrs**

Laboratory	
1	Determination of Alkalinity, Acidity and pH.
2	Determination of Calcium, Magnesium and Total Hardness.
3	Determination of Chlorides and Sulphates.
4	Determination of percentage of available chlorine in bleaching powder, Residual Chlorine and Chlorine Demand.
5	Removal of turbidity by Jar test.
6	Determination of Iron.
7	Determination of Fluorides.
8	Determination of Solids in Sewage: Total Solids, Suspended Solids, Dissolved Solids, Volatile Solids, Fixed Solids, Settleable Solids.
9	Determination of DO
10	Determination of BOD and COD.
11	Total Count Test & MPN Determination.

Course Outcomes: After completing the course, students will be able to	
CO1:	Estimate average and peak wastewater from a community and design suitable conveyance system for sewage and storm water.
CO2:	Design a comprehensive wastewater treatment system to achieve required quality standards for safe disposal and reuse of wastewater.
CO3:	Evaluate wastewater quality, suitable small scale treatment option and sludge disposal.
CO4:	Design an effective and efficient waste water disposal system.

III / IV Semester		
Professional Practice – II **COMMUNICATION SKILLS AND PROFESSIONAL ETHICS**		
Course Code:16HS47		**CIE Marks:** 50
Credits: L:T:P:S: 0:0:1:0		**SEE Marks:** NA
Hours: 18 Hrs		**CIE Duration:** 02 Hrs

Course Learning Objectives: The students will be able to	
1	Develop communication style, the essentials of good communication and confidence to communicate effectively.
2	Manage stress by applying stress management skills.
3	Ability to give contribution to the planning and coordinate Team work.
4	Ability to make problem solving decisions related to ethics.

III Semester	
UNIT-I	
Communication Skills: Basics, Method, Means, Process and Purpose, Basics of Business Communication, Written & Oral Communication, Listening. **Communication with Confidence & Clarity**- Interaction with people, the need the uses and the methods, Getting phonetically correct, using politically correct language, Debate & Extempore.	**06 Hrs**
UNIT-II	
Assertive Communication- Concept of Assertive communication, Importance and applicability of Assertive communication, Assertive Words, being assertive. **Presentation Skills**- Discussing the basic concepts of presentation skills, Articulation Skills, IQ & GK, How to make effective presentations, body language & Dress code in presentation, media of presentation.	**06 Hrs**
UNIT-III.A	
Team Work- Team Work and its important elements Clarifying the advantages and challenges of team work Understanding bargains in team building Defining behaviour to sync with team work Stages of Team Building Features of successful teams.	**06 Hrs**
IV Semester	
UNIT-III.B	
Body Language & Proxemics - Rapport Building - Gestures, postures, facial expression and body movements in different situations, Importance of Proxemics, Right personal space to maintain with different people.	**06 Hrs**
UNIT-IV	
Motivation and Stress Management: Self-motivation, group motivation, leadership abilities, Stress clauses and stress busters to handle stress and de-stress; Understanding stress - Concept of sound body and mind, Dealing with anxiety, tension, and relaxation techniques. Individual Counselling & Guidance, Career Orientation. Balancing Personal & Professional Life-	**06 Hrs**
UNIT-V	
Professional Practice - Professional Dress Code, Time Sense, Respecting People & their Space, Relevant Behaviour at different Hierarchical Levels. Positive Attitude, Self Analysis and Self-Management. **Professional Ethics** - values to be practiced, standards and codes to be adopted as professional engineers in the society for various projects**.** Balancing Personal & Professional Life	**06 Hrs**

Course Outcomes: After completing the course, the students will be able to	
CO1:	Inculcate skills for life, such as problem solving, decision making, stress management.
CO2:	Develop leadership and interpersonal working skills and professional ethics.
CO3:	Apply verbal communication skills with appropriate body language.
CO4:	Develop their potential and become self-confident to acquire a high degree of self.

4.	Aptimithra: Ethnus Best Aptitude Book ,2014 Edition, Tata McGraw Hill ISBN: 9781259058738

Scheme of Continuous Internal Examination (CIE)
Evaluation of CIE will be carried out in TWO Phases.

Phase	Activity	Weightage
I	Test 1 is conducted in III Sem for 50 marks (15 Marks Quiz and 35 Marks Descriptive answers) after completion of Unit-1, Unit-2 and Unit -3.A for 18 hours of training sessions.	50%
II	Test 2 is conducted in IV Sem for 50 marks ((15 Marks Quiz and 35 Marks Descriptive answers) after completion of Unit -3B, Unit - 4 and Unit-5 for 18 hours of training sessions.	50%
	At the end of the IV sem Marks of Test 1 and Test 2 is consolidated for 50 marks (Average of Test1 and Test 2 (T1+T2/2). The grading is provided by the Coe. The final CIE marks is scrutinized by the committee comprising of HSS- Chairman, Training Co-ordinator, respective department Staff Placement co-ordinator before submitting to CoE.

III/IV Semester		
C PROGRAMMING (BRIDGE COURSE) **(Theory)**		
Course Code: 16DCS37		**CIE Marks: 100**
Credits: L:T:P:S : 2:0:0:0 (Audit Course)		**SEE Marks: 100**
Hours: 24L		**SEE : 03 Hrs**
Course Learning Objectives: The students will be able to		
1	Develop arithmetic reasoning and analytical skills to apply knowledge of basic concepts of programming in C.	
2	Learn basic principles of problem solving through programming.	
3	Write C programs using appropriate programming constructs adopted in programming.	
4	Solve complex problems using C programming.	

UNIT-I	
Introduction to Reasoning, Algorithms and Flowcharts Skill development – Examples related to Arithmetical Reasoning and Analytical Reasoning. Fundamentals of algorithms and flowcharts.	**02 Hrs**
Introduction to C programming Basic structure of C program, Features of C language, Character set, C tokens, Keywords and Identifiers, Constants, Variables, Data types.	**01 Hrs**
Handling Input and Output operations Reading a character, Writing a character, Formatted input/output functions, Unformatted input/output functions.	**02 Hrs**
UNIT-II	
Operators and Expressions Arithmetic operators, Relational operators, Logical Operators, Assignment operators, Increment and decrement operators, Conditional operators, Bit-wise operators, Arithmetic expressions, evaluation of expressions, Precedence of arithmetic operators, Type conversion in expressions, Operator precedence and associativity.	**02 Hrs**
Programming Constructs **Decision Making and Branching** Decision making with 'if' statement, Simple 'if' statement, the 'if…else' statement, nesting of 'if…else' statements, The 'else if' ladder, The 'switch' statement, The '*?:*' operator, The '*goto'* statement. **Decision making and looping** The while statement, the do statement, The 'for' statement, Jumps in loops**.**	**03 Hrs**
UNIT-III	
Arrays One dimensional arrays, Declaration of one dimensional arrays. Initialization of one dimensional arrays, Two dimensional arrays, Initializing two dimensional arrays.	**02 Hrs**
Character Arrays and Strings Declaring and Initializing String Variables, Reading Strings from Terminal, Writing strings to screen, Arithmetic Operations on characters, String operations using with and without String handling functions.	**02 Hrs**
UNIT-IV	
User-defined functions Need for User Defined Functions, Definition of functions, Return values and their	**03 Hrs**

types, Function calls, Function declaration, Category of functions, Nesting of functions, Functions with arrays, Storage classes.	
Structures and Unions Introduction, Structure definition, Declaring structure variables, Accessing structure members, Structure initialization, Copying and comparing structure variables, Arrays of structure, Arrays within structures, Structures and functions, Unions.	**03 Hrs**
UNIT – V	
Pointers : Introduction , Accessing the address of a variable, Declaring and initializing of pointer variables, Accessing a variable using pointers, Chain of pointers, Pointer expressions, Pointer increments and scale factor, Pointers and arrays, Pointers and character strings.	**03 Hrs**
File Managements in C Basic concepts of files, Defining and opening a file, closing of a file, Input/Output operations on files.	**01 Hrs**

Course Outcomes: After completing the course, the students will be able to	
CO1.	Understand and explore the fundamental computer concepts and basic programming principles like data types, input/output functions, operators, programming constructs and user defined functions.
CO2.	Analyze and Develop algorithmic solutions to problems.
CO3.	Implement and Demonstrate capabilities of writing 'C' programs in optimized, robust and reusable code.
CO4.	Apply appropriate concepts of data structures like arrays, structures, and files to implement programs for various applications.

Scheme of Continuous Internal Evaluation:

CIE is executed by way of quizzes (Q), tests (T) and Assignment. A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The two tests are conducted and each test is evaluated for 30 marks adding up to 60 marks The marks component for assignment is 10. The total marks of CIE are 100.

Scheme of Semester End Examination:

SEE for 100 marksis executed by means of an examination. The Question paper for each course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from

Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Semester: IV		
WATER RESOURCES ENGINEERING		
Course Code:16CV49		**CIE Marks: 100**
Credits: L:T:P:S: 3:0:0:0		**SEE Marks: 100**
Hours: 36L		**SEE Duration: 3Hrs**

Course Learning Objectives: The students will be able to	
1	Understand the knowledge of earth science and circulation of water on earth through Hydrologic cycle.
2	Analyze the hydrologic data's such as precipitation and its abstraction through evaporation, infiltration and evapotranspiration, runoff.
3	Analysis of stream flow data and estimation of design flood using Hydrograph theory.
4	Study of Ground water potential, conservation of water through rain water harvesting and artificial recharge.

UNIT-I	
Hydrology: Introduction, Hydrologic cycle (Horton's representation and Engineering Representation), water budget equation, Applications in engineering, sources of Data, numerical problems. **Precipitation:** Forms and types of precipitation, Measurement of rain fall using Symon's and Syphon type of rain gauges, Optimum number of rain gauge stations, Consistency of rainfall data (double mass curve method), Computation of mean rainfall, Estimation of missing data, presentation of precipitation data, numerical problems.	**08 Hrs**
UNIT-II	
Abstractions from Precipitation: **Evaporation:** Process, Factors affecting, measurement using ISI standard Pan, Estimation of evaporation using Empirical formulae, numerical problems. **Infiltration:** Factors affecting infiltration capacity, measurement (double ring infiltrometer), Horton's infiltration equation, infiltration indices, numerical problems.	**07 Hrs**
UNIT-III	
Runoff: Factors affecting runoff, runoff measurement, Estimation of runoff using rational and empirical methods, numerical problems. **Stream Flow Measurement:** Measurement of stage, Measurement of velocity by current meters, Measurement of discharge by Area – Velocity method, Simple stage discharge relation.	**07 Hrs**
UNIT-IV	
Hydrographs: Components of hydrographs, unit hydrograph and its derivation from simple storm hydrograph, base flow separation, preparation of unit hydrographs – from isolated storms, method of superposition, Synthetic Unit Hydrographs (Snyder's Method), Numerical problems.	**07 Hrs**
UNIT-V	
Ground Water Hydrology: Scope and importance, Aquifers, Steady radial flow into wells in unconfined and confined aquifers. **Rainwater Harvesting:** Introduction, small tank rain harvesting, urban rainwater harvesting, methods of ground water recharge.	**07 Hrs**

Course Outcomes: After completing the course, the students will be able to	
CO1:	Describe various hydrological parameters for design of water resources projects.
CO2:	Understand the hydrological aspects of surface and ground water, techniques of stream flow measurement and methods of conservation of water.
CO3:	Determine various hydrological parameters over a catchment and ground water potential.
CO4:	Analyse the hydrological data, stream flow data for design hydraulic structures.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and Assignment. A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 60. The marks component for assignment is 10. The total marks of CIE are 100.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marksis executed by means of an examination. The Question paper for each course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Guidelines for Fixing Targets

- The target may be fixed based on last 3 years' average attainment

PROGRAM OUTCOMES (PO)

PO1: **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2: **Problem analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3: **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4: **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5:**Modern tool usage** : Create, select, and apply appropriate techniques, resources, and modern Engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6:**The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7**: Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8: **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9: **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10:**Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11**: Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12: **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
