

RV COLLEGE OF ENGINEERING[®]

(Autonomous Institution Affiliated to VTU, Belagavi) R.V. Vidyaniketan Post, Mysore Road Bengaluru – 560 059

Bachelor of Engineering (B.E.) Scheme and Syllabus of V &VI Semesters

2018 SCHEME

COMPUTER SCIENCE AND ENGINEERING

VISION

Leadership in Quality Technical Education, Interdisciplinary Research & Innovation, with a Focus on Sustainable and Inclusive Technology

MISSION

- 1. To deliver outcome based Quality education, emphasizing on experiential learning with the state of the art infrastructure.
- 2. To create a conducive environment for interdisciplinary research and innovation.
- 3. To develop professionals through holistic education focusing on individual growth, discipline, integrity, ethics and social sensitivity.
- 4. To nurture industry-institution collaboration leading to competency enhancement and entrepreneurship.
- 5. To focus on technologies that are sustainable and inclusive, benefiting all sections of the society.

QUALITY POLICY

Achieving Excellence in Technical Education, Research and Consulting through an Outcome Based Curriculum focusing on Continuous Improvement and Innovation by Benchmarking against the global Best Practices.

CORE VALUES

Professionalism, Commitment, Integrity, Team Work, Innovation

RV COLLEGE OF ENGINEERING[®]

(Autonomous Institution Affiliated to VTU, Belagavi) R.V. Vidyaniketan Post, Mysore Road Bengaluru – 560 059

Bachelor of Engineering (B.E.) Scheme and Syllabus of V &VI Semesters

2018 SCHEME

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

DEPARTMENT VISION

To achieve leadership in the field of Computer Science & Engineering by strengthening fundamentals and facilitating interdisciplinary sustainable research to meet the ever growing needs of the society.

DEPARTMENT MISSION

- To evolve continually as a centre of excellence in quality education in computers and allied fields.
- To develop state-of-the-art infrastructure and create environment capable for interdisciplinary research and skill enhancement.
- To collaborate with industries and institutions at national and international levels to enhance research in emerging areas.
- To develop professionals having social concern to become leaders in top-notch industries and/or become entrepreneurs with good ethics.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

- **PEO1:** Develop Graduates capable of applying the principles of mathematics, science, core engineering and Computer Science to solve real-world problems in interdisciplinary domains.
- **PEO2:** To develop the ability among graduates to analyze and understand current pedagogical techniques, industry accepted computing practices and state-of-art technology.
- **PEO3:** To develop graduates who will exhibit cultural awareness, teamwork with professional ethics, effective communication skills and appropriately apply knowledge of societal impacts of computing technology.
- **PEO4:**To prepare graduates with a capability to successfully get employed in the right role / become entrepreneurs to achieve higher career goals or takeup higher education in pursuit of lifelong learning.

PROGRAM SPECIFIC OUTCOMES (PSOs)

PSO	Description
PSO1	System Analysis and Design
	The student will be able to:
	1. Recognize and appreciate the need of change in computer architecture, data organization and analytical methods in the evolving technology.
	2. Learn the applicability of various systems software elements for solving design problems.
	3. Identify the various analysis & design methodologies for facilitating development of high quality system software products with focus on performance optimization.
	4. Display team participation, good communication, project management and document skills.
PSO2	Product Development
	The student will be able to:
	1. Demonstrate the use of knowledge and ability to write programs and integrate them with the hardware/software products in the domains of embedded systems, databases /data analytics, network/web systems and mobile products.
	2. Participate in planning and implement solutions to cater to business – specific requirements displaying team dynamics and professional ethics.
	3. Employ state-of-art methodologies for product development and testing / validation with focus on optimization and quality related aspects.

Design Thinking for Customer Delight: - Understand Design Thinking as a problem-solving process. Describe the principles of Design Thinking. Describe the Design Thinking process.

Sales Skills to Become an Effective Entrepreneur: - Understand what customer focus is and how all selling effort should be customer-centric. Use the skills/techniques of personal selling, Show and Tell, and Elevator Pitch to sell effectively.

Managing Risks and Learning from Failures: - Identify risk-taking and resilience traits. Understand that risk-taking is a positive trait. Learn to cultivate risk-taking traits. (Practical Application) Appreciate the role of failure on the road to success, and understand when to give up. Learn about some entrepreneurs/risk-takers. (Practical Application).

Are You Ready to be an Entrepreneur: - Let's ask "WHY" Give participants a real picture of the benefits and challenges of being an entrepreneur. Identify the reasons why people want to become entrepreneurs. Help participants identify why they would want to become entrepreneurs.

Course	Course Outcomes: After completing the course, the students will be able to							
CO1:	Comprehend the applicable source, scope and limitations of Intellectual Property within the							
	purview of engineering domain.							
CO2:	Knowledge and competence related exposure to the various Legal issues pertaining to							
	Intellectual Property Rights with the utility in engineering perspectives.							
CO3:	Enable the students to have a direct experience of venture creation through a facilitated							
	learning environment.							
CO4:	It allows students to learn and apply the latest methodology, frameworks and tools that							
	entrepreneurs use to succeed in real life.							

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20. 50% weightage should be given to case studies. Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marksis executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.**50% weightage should be given to case studies.**

Unit – I

Regular Languages and Regular Expressions, Memory Required to Recognize a Language, Deterministic Finite Automata (DFA), Non Deterministic Finite Automata (NFA), Non Deterministic Finite Automata with ϵ -transitions (NFA- ϵ), Equivalence, Regular Expressions and Finite Automata, Applications of Regular Expressions, Algebraic laws of Regular Expressions, Minimization of Finite Automata.

Unit – II					
Pumping Lemma for Regular Languages, Closure properties of Regular Languages,	Decision				
properties of Regular languages, Context-free grammars (CFG), Parse trees, Applications, A	Ambiguity				
in grammars & languages, Simplification of CFG, Normal forms of CFGs. Regular C	Grammars,				
Equivalence of Regular Grammars and Finite Automata.					

Unit – III8 HrsPush Down Automata (PDA): Definition, the languages of a PDA, Equivalence of PDA's & CFG's,
Deterministic PDA. The Pumping Lemma for Context Free Languages (CFL), Closure properties of
CFLs, Decision properties of CFLs

Unit – IV	8 Hrs
Turing Machines (TM): Definitions and Examples, TM as a Language Accepter, Computing	Partial
Functions with Turing Machine, Variations of Turing Machines, Combining Turing Machine	es, Non
Deterministic TM, Universal TM, Recursively Enumerable Languages (REL) and Recursive	
Languages. Properties of REL and Recursive Languages.	
Unit – V	7 Hrs

More General Grammars, Unrestricted Grammar, Context Sensitive Languages (CSL) and Linear Bounded Automata (LBA), Chomsky Hierarchy, Not all languages are Recursively Enumerable, Unsolvable Problem, Reducing One problem to another, The halting problem of TM, Post's Correspondence Problem (PCP), Time and Space Complexity of TM.

8 Hrs

Course	Course Outcomes: After completing the course, the students will be able to						
CO 1:	Understand the fundamental concepts of theory of computations.						
CO 2:	Analyze the tools of finite automata to various fields of computer science.						
CO 3:	Design solution model for complex problems, using the appropriate skills of automata theory						
	for better results.						
CO 4:	Apply automata skills in situations that describe computation effectively and efficiently.

Unit – I

7Hrs

Introduction to Database Systems -Databases and Database users: Introduction,

An example, Characteristics of Database Approach, Actors on the scene, Workers behind the scene. Database System—Concepts and Architecture: Data Models, Schemas and Instances, Three-schema Architecture and Data Independence, Database Languages and Interfaces, The Database System Environment.

Data Modeling Using the Entity-Relationship Model-Using High-Level

Conceptual Data Models for Database Design; A Sample Database Application; Entity Types, Entity Sets, Attributes and Keys; Relationship types, Relationship Sets, Roles and Structural Constraints; Weak Entity Types;

Unit – II	8Hrs
Refining the ER Design for the COMPANY Database; ER Diagrams, Naming onvention	is and
Design Issues, Using ER- to-Relational Mapping.	

Relational Model and Relational Algebra-Relational Model Concepts; Relational Model Constraints and Relational Database Schemas; Update Operations and Dealing with Constraint Violations; Unary Relational Operations: SELECT and PROJECT; Relational Algebra Operations from Set Theory; Binary Relational Operations: JOIN and DIVISION ;Additional Relational Operations; Examples of Queries in Relational Algebra; Relational Database Design.

Unit – III	8Hrs
SQL Schema Definition, Basic Constraints and Queries-SQL Data Definition, S	Specifying
Constraints in SQL, Schema Change Statements in SQL; Basic Queries in SQL; Insert, I	Delete and
Update Statements in SQL More Complex	
SQL Retrieval Queries.	

Relational Database Design - Functional Dependencies; Normal Forms Based on Primary Keys; General Definitions of Second and Third Normal Forms; Boyce-Codd Normal Form; Properties of Relational Decompositions; Multivalued Dependencies, Fourth Normal Form and Fifth Normal Form.

Unit – IV	ðHrs
Transaction Processing Concepts- Introduction to transaction processing, Transaction	states and
additional operations, Desirable properties of transaction, Schedules of transactions, Char	racterizing
schedules based on Recoverability, Characterizing schedules based on Serializabilit	y: Serial,
Nonserial and Conflict-Serializable schedules, Testing for Conflict serializability of schedules	lule, Uses
of serializability.	

Concurrency Control Techniques: Two phase locking techniques for concurrency control, types of locks and system lock tables, Guaranteeing serializability by two-phase locking, Dealing with Deadlock and starvation, Concurrency control based on timestamp ordering.

Database Recovery Techniques: Recovery Concepts, Shadow Paging, The ARIES recovery. **Introduction to NoSQL**- Aggregate data models : aggregates, key-value and document data models.

Unit – V

8 Hrs

Relationships: graph : databases , schemaless databases Distribution models :sharding, master-slave replication, peer-peer replication –combining sharding and replication.

Laboratory Component

Open Ended Mini Project should be implemented and shall be carried out in a batch of two students. The students will finalize a topic in consultation with the faculty. The Mini Project tasks would involve:

- Understand the complete domain knowledge of application and derive the complete data requirement specification.
- Design of the project with Integrated database solution (SQL, NOSQL and emerging techniques)
- Normalization of the Relational design up to 3NF (Desirable 5NF).
- Appreciate the importance of security for database systems.
- Documentation and submission of report.

 CO 1: Understand and explore the needs and concepts of relational and NoSQL database. CO 2: Apply the knowledge of logical database design principles to real time issues. CO 3: Analyze and design relational and NoSQL data model concepts 	Course	Course Outcomes: After completing the course, the students will be able to							
	CO 1:	Understand and explore the needs and concepts of relational and NoSQL database.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20.

Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Scheme of Continuous Internal Evaluation (CIE); Practical Test for 50 Marks

The Laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average marks (AM) over number of weeks is considered for 30 marks. At the end of the semester a test (T) is conducted for 10 marks. The students are encouraged to implement additional innovative experiments (IE) in the lab and are rewarded for 10 marks. Total marks for the laboratory is 50.

Total CIE is 30(AM) +10 (T) +10 (IE) =50 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub

questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Scheme of Semester End Examination (SEE); Practical Exam for 50 Marks

SEE for the practical courses will be based on experiment conduction with proper results, is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

List of Experiments

PART - A: EXPERIMENTS

- 1. Implement a client and server communication using sockets programming.
- 2. Write a program to implement distance vector routing protocol for a simple topology of routers.

- 3. Write a program to implement error detection and Correction concept using Checksum and Hamming code.
- 4. Implement a simple multicast routing mechanism.
- 5. Write a program to implement concurrent chat server that allows current logged in users to communicate one with other.
- 6. Implementation of concurrent and iterative echo server using both connection and connectionless socket system calls.
- 7. Implementation of remote command execution using socket system calls.
- 8. Write a program to encrypt and decrypt the data using RSA and Exchange the key securely using Diffie-Hellman Key exchange protocol.

Note: The above experiments shall be conducted using C / C++ on Linux Operating System. PART – B: SIMULATION

1. Setup an IEEE 802.3 network with a) hub b) switch c) Hierarchy of switch. Apply theFTP, Telnet applications between nodes. Vary the number of nodes. Vary the bandwidth,queue size and observe the packet drop probability.

2. Setup a wireless sensor networks with atleast two device co-coordinators and nodes.Provide Constant Bit Rate (CBR), Variable Bit Rate (VBR) application between severalnodes. Increase the number of co-coordinators and nodes in the same area and observe theperformance at physical and MAC layers.

3. Setup an IEEE 802.11 network with atleast two access points. Apply the CBR, VBRapplications between devices belonging to same access points and different access points.Provide roaming of any device. Vary the number of access points and devices. Find outthe delay in MAC layer, packet drop probability.

4. Case Study on Configuring Routers using CISCO-Packet tracer.

Course	Outcomes: After completing the course, the students will be able to
CO 1:	Understand and Explore the OSI reference model and a variety of network concepts and
	protocols.
CO 2:	Analyze network Protocols interoperability and application.
CO 3:	Design and demonstrate client/server programs on Unix platforms to create robust real-world
	sockets-based applications.
CO 4:	Apply appropriate cryptographic algorithms to ensure security of information through
	wired and wireless medium.

Laboratory Component

PART-A

Software Engineering Virtual Labs will be used to carry out activities weekly in the laboratory. The Virtual Lab is a MHRD, Govt. of India initiative.

http://vlabs.iitkgp.ac.in/se/

List of Experiments:

- 1) Identifying the Requirements from Problem Statements
- 2) Estimation of Project Metrics
- 3) Modeling UML Use Case Diagrams and Capturing Use Case Scenarios
- 4) Identifying Domain Classes from the Problem Statements
- 5) State chart and Activity Modeling
- 6) Modeling UML Class Diagrams and Sequence diagrams
- 7) Modeling Data Flow Diagrams
- 8) Estimation of Test Coverage Metrics and Structural Complexity
- 9) Designing Test Suites

PART-B

Student will analyse, design, and implement an application using the appropriate Software engineering tools and practices. All topics learnt in virtual lab (SE phases) need to be covered. A report of the same is expected to be submitted.

Some example applications are listed below(not limited to):

- Automated banking application
- Online shopping portal
- CIE seating arrangement
- SEE Exam invigilation duty allotment
- UG Project Evaluation system
- Employee Payroll system

List of Submissions:

- 1) Requirements Analysis document
- 2) Design document
- 3) Implementation details
- 4) Testing document with appropriate test cases.

Constraints and Dependencies

Course	Course Outcomes: After completing the course, the students will be able to						
CO1:	Comprehend various software life cycle models and steps of software development process.						
CO2:	Apply concepts of Software Project Planning and software Design techniques						
CO3:	Analyze capabilities of various tools to assist in the software development activities						
CO4:	Develop robust software design and software project plan from requirement gathering to						
	implementation

Cre	dits: L:T:P	:	3:0:0	SEE Marks	:	100	
Tota	al Hours	:	39L	SEE Duration	:	Online Exam	
Cou	rse Learning	Obj	ectives: The students wil	l be able to			
1.	Introduce va	riou	s techniques to find simil	ar words using the context of su	rrou	nding words	
2.	Build a Language model to predict the next word and generate sentences						
3.	3. Encode every word in the vocabulary of the corpus into a vector form that represents its context and similar words						
4.	Encode a se	nten	ce for machine translatior	and conversation purposes.			
5.	5. To gather sufficient knowledge and proficiency in probabilistic, Artificial Neural Network (ANN) and deep learning techniques for NLP.						

Unit – I	8 Hrs
Introduction, terminologies, empirical rules	
Word to Vectors	
Probability and Language Model	
Unit – II	8 Hrs
Neural Networks for NLP	
Distributed word vectors (word embeddings)	
Recurrent Neural Network, Language Model	
Unit – III	8 Hrs
Statistical Machine Translation	
Statistical Machine Translation, Neural Machine Translation	
Neural Machine Translation	
Unit – IV	8 Hrs
Conversation Modeling, Chat-bots, dialog agents, Question Processing	
Information Retrieval tasks using Neural Networks- Learn to Rank, Understanding Ph	nrases,
analogies	
Spelling Correction using traditional and Neural networks, end notes	
Unit – V	7 Hrs
Practical Applications of NLP	

Course	Outcomes: After completing the course, the students will be able to
CO 1:	Understand approaches to syntax and semantics in NLP.
CO 2:	Understand Apply approaches to discourse, generation, dialogue and summarization
	within NLP.
CO 3:	Analyze current methods for statistical approaches to machine translation.
CO 4:	Understand machine learning techniques used in NLP, including hidden Markov
	models and probabilistic context-free grammars, clustering and unsupervised
	methods, log-linear and discriminative models, and the EM algorithm as applied
	within NLP

Unit-I

08 Hrs

Introduction to the course:

What Do We Do in NLP, Why is NLP hard, Empirical Laws, Text Processing: Basics Spelling Correction: Edit Distance, Weighted Edit Distance, Other Variations, Noisy Channel Model for Spelling Correction, N-Gram Language Models, Evaluation of Language Models Basic Smoothing.

Unit – II							
Language Modelling: Advanced Smoothing Models, Computational Morphology, Fi	nite- State						
Methods for Morphology, Introduction to POCS Tagging.							
Viterbi Decoding for HMM Parameter Learning, Baum Welch Algorithm, Maximum Entropy							
Models- I, Maximum Entropy Models – II, Conditional Random Fields							
Unit –III 08 H							

Syntax – Introduction, Parsing I, CKY, PCFGs, PCFGs - Inside-Outside Probabilities, Inside-Outside Probabilities

Dependency Grammars and Parsing – Introduction, Transition Based Parsing: Formulation, Transition Based Parsing: Learning, MST-Based Dependency Parsing; Learning.

Distributional Semantics – Introduction Distributional Models of Semantics, Distributional Semantics: Applications, Structured Models, Word Embeddings - Part I, Word Embeddings - Part II. Unit –IV 08 Hrs

Lexical Semantics, Lexical Semantics – Wordnet, Word Sense Disambiguation – I, Word Sense Disambiguation – II, Novel Word Sense detection.

Topic Models: Introduction, Latent Dirichlet Allocation: Formulation, Gibbs Sampling for LDA, Applications, LDA Variants and Applications – I, LDA Variants and Applications - II

 Unit –V
 08 Hrs

 Entity Linking – I, Entity Linking – II, Information Extraction Introduction, Relation Extraction, Distant Supervision,

Text Summarization – LEXRANK, Optimization based Approaches for Summarization, Summarization Evaluation, Text Classification – I, Text Classification - II.

Sentiment Analysis – Introduction, Sentiment Analysis - Affective Lexicons, Learning Affective Lexicons, Computing with Affective Lexicons, Aspect - Based Sentiment Analysis

Cours	Course Outcomes: After completing the course, the students will be able to:-									
CO1	Understand and Explore the basics of any language representation and model them with									
	formal grammars.									
CO2	Apply experimental methodology for training and evaluating empirical NLP systems.									
CO3	Analyze the linguistic phenomena and linguistic features to each NLP task									
CO4	Demonstrate the use of modern NLP techniques for processing of text

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20.

Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

 07 Hrs

 Micro & Nano-Electromechanical systems and Microfluidics: MEMS/NEMS: Magnetic,

 Chemical and Mechanical Transducers –Sensing and Actuators. Microfluidics: Laminar flow,

 Hagen-Peouiselle equation, basic fluid ideas, Special considerations of flow in small channels,

 mixing, microvalves & micropumps.

Unit –v	U/ Hrs
Applications of Nanotechnology: Molecular electronics, molecular switches, mechanica	al cutting
tools, machine components, magnets, DLC coated grinding wheels. Electrical, electron	nic, solar
cells, Batteries, fuel cells, Nanofilters. Medical nanotechnology: in Diagnostics, Therapeut	ics, Drug
delivery and Nanosurgery. Nano in Agriculture- nanopesticides, nanofertilizers etc.	

Course (Course Outcomes: After completing the course, the students will be able to					
CO1:	Understand the structures of nano materials and their properties.					
CO2:	Apply the various synthesis and fabrication methods and interpret the characterization					
	results.					
CO3:	Analyze the working mechanism of nanosensors and transducers and Apply its					
	knowledge in various fields.					
CO4:	Create and evaluate nano Design, Devices and Systems in various disciplines.

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20.

Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

3 Analyze th	3 Analyze the data gathered from various sensors and interpret for various applications.						
4 Apply the principles of RS, GIS and GPS in various scopes of Civil Engineering.							
ł							
			Unit-I			07 Hı	

Unit-I	07 Hrs
Remote Sensing- Definition, types of remote sensing, components of remote sensing, elec	tromagnetic
spectrum, Black body, Atmospheric windows, energy interaction with earth surface feature	es. Spectral
reflectance curve. Platforms and sensors. Sensor resolutions. Types of satellites- Indian	n and other
remote sensing satellites (IRS, IKONS and Landsat). Principle of visual interpretation - key	elements.
Unit – II	08 Hrs
Photogrammetry: Introduction types of Photogrammetry, Advantages Photogrammetry,	Introduction
to digital Photogrammetry.	
Aerial Photogrammetry: Advantages over ground survey methods- geometry of vertical p	hotographs,
scales of vertical photograph. Ground coordination- relief displacement, scale ground co	ordinates –
flight planning.	
Unit –III	08 Hrs
Geographic Information System- Introduction, Functions and advantages, sources of da	ata for GIS.
Database - Types, advantages and disadvantages. Data Analysisoverlay operations, netwo	ork analysis,
spatial analysis. Outputs and map generation.	
GPS- components and working principles.	
Unit –IV	08 Hrs
Applications of GIS, Remote Sensing and GPS: Water Resources engineering and r	nanagement
(prioritization of river basins, water perspective zones and its mapping), Highway and tra	ansportation
(highway alignment, Optimization of routes, accident analysis), Environmental Engine	ering (Geo-
statistical analysis of water quality, rainfall).	
Unit –V	08 Hrs
Applications of GIS, Remote Sensing and GPS: Urban Planning & Management, ur	ban sprawl,
Change detection studies, forests and urban area, agriculture, Disaster Management. La	youts: Dead
and Dedict Cristian Constant	
end, Radial, Grid iron, Circular system.	

Course	Course Outcomes: After completing the course, the students will be able to						
CO1:	Understand and remember the principle of Remote Sensing (RS) and Geographical Information						
	Systems (GIS) data acquisition and its applications.						
CO2:	Apply RS and GIS technologies in various fields of engineering and social needs						

CO3:	Analyze and evaluate the information obtained by applying RS and GIS technologies.
CO4:	Create a feasible solution in the different fields of application of RS and GIS

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20. **Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.**

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

UNIT-I

Fundamentals of Automotive: Evolution and Use of Electronics in Automotive, Automotive Systems, The Engine, Engine Control, Internal Combustion Engines, Spark Ignition Engines and Alternative Engines. Ignition System, Ignition Timing, Drivetrain, Suspensions, Brakes and Steering Systems. **Basics of electronic engine control:** Motivation for Electronic Engine Control, Concept of an Electronic Engine control system, Definition of General terms, Definition of Engine performance terms, Engine mapping, Effect of Air/Fuel ratio, spark timing and EGR on performance, Control Strategy, Electronic Fuel control system, Analysis of intake manifold pressure, Electronic Ignition.

08 Hrs

07 Hrs

08 Hrs

Automotive Sensors and Actuators:

Automotive Control System Applications of Sensors and Actuators,

Sensors: Air Flow Sensor, Engine Crankshaft Angular Position Sensor, Throttle Angle Sensor, Temperature Sensor, Sensors for Feedback Control, Sensors for Driver Assistance System: Radar, Lidar, Video Technology.

Actuators: Solenoids, Piezo Electric Force Generators, Fluid mechanical Actuators, Electric Motors and Switches.

UNIT-III

UNIT-II

Digital Engine Control Systems: Digital Engine control features, Control modes for fuel Control (Seven Modes), EGR Control, Electronic Ignition Control - Closed Loop Ignition timing, Spark Advance Correction Scheme, Integrated Engine Control System.

Vehicle Motion Control: Typical Cruise Control System, Digital Cruise Control System, Digital Speed Sensor, Throttle Actuator, Digital Cruise Control configuration, Cruise Control Electronics (Digital only), Antilock Brake System (ABS), Electronic Suspension System, Electronic Steering Control.

UNIT-IV	08 Hrs
Automotive Communication Systems:	
Automotive networking: Bus systems, Technical principles, network topology. Buses in motor	vehicles:
CAN, Flex Ray, LIN, Ethernet, IP, PSI5, MOST, D2B and DSI.	

Automotive Embedded Software Development

Fundamentals of Software and software development lifecycles. Overview of AUTOSAR methodology and principles of AUTOSAR Architecture.

Diagnostics and Safety in Automotive:

Timing Light, Engine Analyzer, Electronic Control System Diagnostics: Onboard diagnostics, Off-board diagnostics, Expert Systems, Occupant Protection Systems – Accelerometer based Air Bag systems, Case study on ON-BOARD, OFF-BOARD diagnostics.

Advances in Automotive Electronic Systems: Alternative Fuel Engines, Electric and Hybrid vehicles, Fuel cell powered cars, Collision Avoidance Radar warning Systems, Navigation: Navigation Sensors, Radio Navigation, dead reckoning navigation, Video based driver assistance systems, Night vision Systems.

Course	Outcomes: After completing the course, the students will be able to
CO1:	Acquire the knowledge of automotive domain fundamentals, need of Electronics and
	communication interfaces in Automotive systems.
CO2:	Apply various types of sensors, actuators and Motion Control techniques in Automotive
	systems
CO3:	Analyze digital engine control systems and Embedded Software's and ECU's used in
	automotive systems.
CO4:	Illustrate the concepts of Diagnostics, safety and advances in Automotive electronic Systems.

4	Design EV S	imı	alator through perfo	ormance evaluation	and system optimiz	atio	n techniques					
	and need for t	the	charging infrastruct	ure.								

Unit-I	06 Hrs
Electromobility and the Environment: A Brief History of the Electric Powertrain,	Energy
Sources for Propulsion and Emissions, The Advent of Regulations, Drive Cycles, BE	EV Fuel
Consumption, Range, and mpge, Carbon Emissions for Conventional and Electric Power	ertrains,
An Overview of Conventional, Battery, Hybrid, and Fuel Cell Electric Systems, A Com	parison
of Automotive and Other Transportation Technologies.	_
Vehicle Dynamics: Vehicle Load Forces, Vehicle Acceleration, Simple Drive Cycle for	Vehicle
Comparisons	
Unit – II	09 Hrs
Batteries: Batteries Types and Battery Pack, Lifetime and Sizing Considerations,	Battery
Charging, Protection, and Management Systems, Battery Models, Determining the Co	ell/Pack
Voltage for a Given Output\Input Power, Cell Energy and Discharge Rate.	
Battery Charging: Basic Requirements for Charging System, Charger Architecture	es, Grid
Voltages, Frequencies, and Wiring, Charging Standards and Technologies, SAE J1772, W	Vireless
Charging, The Boost Converter for Power Factor Correction.	
Unit -III	10 Hrs
Battery Management System: BMS Definition, Li-Ion Cells, Li-Ion BMSs, Li-Ion B	atteries,
BMS Options: Functionality, CCCV Chargers, Regulators, Balancers, Protectors, Funct	ionality
Comparison, Technology, Topology.	
BMS Functions: Measurement: Voltage, Temperature, Current, Management: Pro	otection,
Thermal Management, Balancing, Distributed Charging, Evaluation, External Commun	ication:
Dedicated analog and digital wires.	
Unit –IV	07 Hrs
Electric Drivetrain: Overview of Electric Machines, classification of electric machines	used in
automobile drivetrains, modelling of electric machines, Power Electronics, controlling	electric
machines, electric machine and power electronics integration Constraints.	
Unit –V	07 Hrs
EV Simulation: system level simulation, EV simulator, simulator modules, perfo	ormance
evaluation, system optimization.	
EV Infrastructure: Domestic charging infrastructure, Public charging infrast	ructure,
Standardization and regulations, Impacts on power system.	

Course	Course Outcomes: After completing the course, the students will be able to									
CO1:	Explain the basics of electric and hybrid electric vehicles, their architecture, technologies									
	and modelling.									
CO2:	Discuss and implement different energy storage technologies used for electric vehicles									
	and their management system.									
CO3:	Analyze various electric drives and its integration techniques with Power electronic									
	circuits suitable for electric vehicles.									
CO4 :	Design EV Simulator for performance evaluation and system optimization and									
	understand the requirement for suitable EV infrastructure.

3	Apply the	prir	nciples of differ	ent type of sensors and transducers on state	of art pr	oblems.							
4	Create a sy	ste	m using approp	riate transducers and sensors for a particula	r applica	tion.							

Unit-I	07 Hrs
Introduction: Definition of a transducer, Block Diagram, Classification of Transducers, A	dvantages
of Electrical transducers.	
Resistive Transducers:	
Potentiometers: Characteristics, Loading effect, and problems.	
Strain gauge: Theory, Types, applications and problems.	
Thermistor, RTD: Theory, applications and problems.	
Unit – II	09 Hrs
Thermocouple: Measurement of thermocouple output, compensating circuits, lead comp	pensation,
advantages and disadvantages of thermocouple.	
LVDT: Principle, Characteristics, Practical applications and problems.	
Capacitive Transducers: Capacitive transducers using change in area of plates, distance	between
plates and change of dielectric constants, Applications of Capacitive Transducers and problem	ns
Unit –III	09 Hrs
Piezo-electric Transducers: Principles of operation, expression for output voltage, Piez	o-electric
materials, equivalent circuit, loading effect, Frequency response and Problems.	
Special Transducers: Hall effect transducers, Thin film sensors, and smart transducers:	Principles
and applications, Introduction to MEMS Sensors and Nano Sensors, Schematic of the	design of
sensor, applications.	
Unit –IV	07 Hrs
Chemical sensors: pH value sensor, dissolved oxygen sensor, oxidation-reduction potenti	al sensor,
Zirconium probe Sensors, Chem FET sensors.	
Photo sensors: Photo resistor, Photodiode, Phototransistor, Photo-FET, Charge coupled devi	.ce.
Tactile sensors: Construction and operation, types.	
Unit –V	07 Hrs
Humidity Sensors and Moisture Sensors: Concept of humidity, Electrical Conductivity	Sensors,
Thermal Conductivity Sensors, Optical Hygrometer, Oscillating Hygrometer.	
IR Sensors: Golay cells, Thermopile, pyroelectric sensor, bolometers, Active Far-Infrared	l Sensors,
Gas flame detectors	

Course	Course Outcomes: After completing the course, the students will be able to									
CO1:	Jnderstand the basic principles of different transducers and sensors.									
CO2:	apply the knowledge of transducers and sensors to comprehend digital instrumentation									
	systems.									
CO3:	Analyze and evaluate the performance of different transducers and sensors for various									
	applications.									
CO4:	Create a system using appropriate transducers and sensors for a particular application.

Systems as planned organizational change, Overview of systems development.

Course	Course Outcomes: After completing the course, the students will be able to							
CO1:	Understand and apply the fundamental concepts of information systems.							
CO2:	Develop the knowledge about management of information systems.							
CO3:	Interpret and recommend the use information technology to solve business problems.							
CO4 :	Apply a framework and process for aligning organization's IT objectives with business strategy.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20.

Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Total Hours			39 L		SEE Duration	:	3.00 Hours	
Cour	rse Learning O	bje	ctives: The students will	be able to				
1	Identify vario	us N	Iechatronics systems of a	a modern automobile				
2	Describe how	the	proper quantity/grade of	fuel affects engine perfe	ormance.			
3	Understand B	hara	t-VI / EURO-VI emissio	on norms				
4	Apply the know	wle	dge of engineering and s	cience to analyse the per	rformance of Me	cha	tronics	
	system							
5	Analyse vehic	ele s	ub-systems comprising o	f sensors and actuators				

Unit-I	06 Hrs				
Automobile Engines					
Classifications of Internal Combustion Engines. Engine nomenclature and mechanics. Mixture	formation				
and direct fuel injection - homogeneous and stratified injection. Thermodynamic principles of	Otto and				
Diesel cycle. Operation, characteristics and energy yield in a 4-stroke engine. Fuels: Gasoline,	Diesel,				
LPG and Natural Gas for automotive applications. Fuel properties- Octane number and Cetane	number.				
Unit-II					
Engine Auxiliary Systems:					
Air Intake and Exhaust System (Bharat Stage -VI norms) - Intake manifold, Turbocharger, In	tercooler,				
Exhaust manifold, 3-way and oxidation catalytic convertor, Exhaust Gas Recirculation system.					
Common Rail Fuel Injection system- Low pressure and high-pressure fuel systems, Re	turn line,				
Quantity control valve, Injectors – solenoid and piezo injectors.					
Unit-III	10 Hrs				
Vehicular Auxiliary Systems:					
Vehicle frame and body classification- Hatchback, Sedan, SUV, Coupe, Roadster. Adaptive	Brakes -				
Disc and drum brakes, Antilock Braking Systems, ESP, TCS. Wheels and Tyres- Toe-In,	Toe-Out,				
Caster and Camber angle. Classification of tyres, Radial, Tubeless.					
Supplemental Restraint System: Active and passive safety, Vehicle structure, Gas generator	and air				
bags, Belt Tensioner, Acceleration sensor, Rollover sensor, Seat occupancy recognition.					
Unit-IV	07 Hrs				
Principles of motor vehicle electronics - Basic structure of control units, Functions of control	rol units and				
On-Board Diagnostic kit.					
Telematics in vehicles – Radio Transmission, Interference and signal processing. Lubrication	and cooling				
system- Components, working principle, Properties, Viscosity.					
Unit-V	06 Hrs				
Sensors: Oxygen sensors, Crankshaft Angular Position Sensor, Manifold Absolute Pressure Se	ensor,				
Coolant Temperature Sensor, Hot Film Mass Air flow Sensor, Throttle Position Sensor.					

Course	Course Outcomes: After completing the course, the students will be able to								
CO1:	: Describe the functions of Mechatronic systems in a modern automobile								
CO2:	Evaluate the performance of an engine by its parameters								
CO3:	Analyse the automotive exhaust pollutants as per emission norms								
CO4:	Demonstrate communication of control modules using a On-Board Diagnostic kit

transport devices, Single-electron transistors, Optical properties of Quantum Wells and Superlattices, Quantum Dots and Nano crystals. Quantum confined Stark effect, Stark ladders, Bloch oscillations. Spintronics, transport of spin, spin valve, Giant Maneto-resistance, Spin Injection (Johnson-Silsbee experiments).

Course	Course Outcomes: After completing the course, the students will be able to								
CO1:	After successful completion of the course the student will be able to identify the different domains								
	of application of the concepts of Quantum mechanics in Nano structures, super-lattices and								
	Photonics.								
CO2:	The student will gain knowledge to understand the crucial physics layers and principles that are at								
	the core of nano and meso technology.								
CO3:	The student will be able to apply the concepts to solve problems (quantitative and qualitative)								
CO4 :	The student can apply the concepts in an interdisciplinary manner and can create new ideas and								
	products related to appliances and sensors, that use the said concepts.

Thin Film Applications:

Band gap Engineering through thin films for electrical and optical applications. Thin Film for energy applications - coating on solar cells, fuel cells, batteries and super capacitors. Thin film thermo electric materials for thermal sensor applications. Thin film coating as protective coating for optical surfaces and as anti-reflection. Thin Film drug delivery and antibacterial surfaces - opportunities and challenges

07 Hrs

Ellipsometry, Raman Spectroscopy. Dielectric and Mechanical properties characterization.

Unit –V

Course	e Outcomes: After completing the course, the students will be able to								
CO1:	Understand the basic mechanism of surface modification and thin film growth.								
CO2:	Attain strong hold on thin film preparation by various techniques and their characterization								
	methods.								
CO3:	Apply the knowledge to select the most potential methods to produce thin films for wanted								
	applications.								
CO4:	Detailed knowledge of thin film selection for various applications.

	319-30197-6.

CIE is executed by way of quizzes (Q), tests (T) and Experiential Learning (EL). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for experiential learning is 20.

Total CIE is 30(Q) +50(T) +20(EL) =100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Course	Course Outcomes: After completing the course, the students will be able to								
CO1:	CO1: Understand the causes and mechanism of various types of corrosion								
CO2:	Identify, analyze and interpret corrosion with respect to practical situations.								
CO3:	Apply the knowledge of chemistry in solving issues related to corrosion.								
CO4:	Develop practical solutions for problems related to corrosion.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20.

Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Course	Course Outcomes: After completing the course, the students will be able to											
CO1:	Identify and interpret the fundamental aspects of different Mathematical concepts and											
	corresponding computational techniques.											
CO2:	Apply the knowledge and skills of computational techniques to solve different types of application											
	problems.											
CO3:	Analyze the physical problem and use appropriate method to solve numerically using											
	computational techniques.											
CO4:	Distinguish the overall mathematical knowledge gained to demonstrate and analyze the problems											
	arising in engineering practice.

Course	Course Outcomes: After completing the course, the students will be able to						
CO1:	Explore the fundamental concepts of mathematics involved in machine learning techniques.						
CO2:	Orient the basic concepts of mathematics towards machine learning approach.						
CO3:	Apply the linear algebra and probability concepts to understand the development of different						
	machine learning techniques.						
CO4:	Analyze the mathematics concepts to develop different machine learning models to solve practical						
	problems.

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20.

Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

		I	(Theory)		1	[
Course Code	:	18G5B18		CIE	:	100 Marks
Course Code	:	18G5B02		SEE	:	100 Marks
Total Hours	:	39L		SEE Duration	:	03 Hours
Course Learnin	ng O	bjectives: Stud	lents are expected to			
1. To incul	cate	an understandi	ng of concept of money and its imp	portance in the ev	valu	ation of
projects.						
2. Analyze	the p	present worth o	f an asset.			
3. Evaluate	the	alternatives ba	sed on the Equivalent Annual Wort	h.		
4. Illustrate	e con	cept of money	and its importance in evaluating th	e projects.		

Unit – I	07 Hrs
Introduction: Principles of Engineering Economy, Engineering Decision- Makers, Engineering	ering and
Economics, Problem solving and Decision making, Intuition and Analysis, Tactics and Strategy.	
Interest and Interest Factors: Interest rate, Simple interest, Compound interest, Cash- flow	diagrams,
Exercises and Discussion.	
Unit – II	07 Hrs
Present worth comparison : Conditions for present worth comparisons, Basic Present worth com	nparisons,
Present worth equivalence, Net Present worth, Assets with unequal lives, infinite lives, Futu	re worth
comparison, Pay – back comparison, Exercises, Discussions and problems.	
Unit – III	07 Hrs
Equivalent annual worth comparisons: Equivalent Annual Worth Comparison methods, Situ	ations for
Equivalent Annual Worth Comparison Consideration of asset life, Comparison of assets with	equal and
unequal lives, Use of sinking fund method, Exercises, Problems.	
Rate of return calculations: Rate of return, Minimum acceptable rate of return, IRR, IRR miscon	nceptions,
Problems.	
Unit – IV	06 Hrs
Replacement Analysis: Replacement studies, replacement due to deterioration, obsolescence, in	adequacy,
economic life for cyclic replacements, Exercises, Problems.	
Break- Even Analysis: Basic concepts, Linear Break- Even analysis, Exercises, Problems.	
Unit – V	06 Hrs
Depreciation: Causes of Depreciation, Basic methods of computing depreciation charges, I	Exercises,
Problems.	
Effects of inflation: Causes, consequences and control of inflation, inflation in economic analysis	8.
Course Outcomes: After going through this course the student will be able to	
CO 1: Explain the time value of money, and how to sketch the cash flow diagram	

	1
CO 2:	Compare the alternatives using different compound interest factors, Select a feasible alternative
	based on the analysis.
CO 3:	Formulate a given problem for decision making

CO 4:	Evaluate alternatives and develop capital budget for different scenarios
	Drandate anternatives and develop capital badget for anterent section

Semester: VI												
ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING												
	(Theory & Practice)											
(Common to CS & IS)												
Course Code	:	18CS62		CIE Marks	:	100+50						
Credits: L:T:P	:	3:1:1		SEE Marks	:	100+50						
Total Hours	:	39L+26T +35P		SEE Duration	:	3 Hrs + 3 Hrs						

Course Learning Objectives: The students will be able to

1.	Acquire basic principles of working of Artificial Intelligence technology and Machine learning
	algorithms
2.	Understand the practical requirements of AI agents, Searching strategies, Propositional and First-
	order Logics
3.	Develop AI and ML solutions for reasoning while dealing the uncertain situations, and making
	use of effective Knowledge representation strategies
4.	Identify the applications of some of the Machine learning techniques such as Bayesian networks,
	Decision tress, and Reinforcement learning in real world problems

Unit – I7 HrsIntroduction, intelligent agents, searching: What is AI? Intelligent Agents: Agents and environment;
Rationality; the nature of environments; the structure of agents. Problem-solving: Problem-solving
agents; Searching for solution; Uninformed search strategies; Informed search strategies, Heuristic
Functions

Unit – II

Adversarial search, constraint satisfaction problems, logical agents, first-order logic : Games, Optimal decision in games, Alpha-Beta Pruning, Defining Constraint satisfaction problems; Backtracking search for CSPs; Knowledge-based agents; The Wumpus world as an example world; Logic; propositional logic; Propositional theorem proving; Syntax and semantics of first-order logic; Using first-order logic;

Unit – III

8 Hrs

8 Hrs

Knowledge representation: Ontological Engineering; Categories and Objects; Events; Mental events and Mental objects; Reasoning system for categories;

Probabilistic reasoning: Representing knowledge in an uncertain domain; Semantics of Bayesian Networks; Efficient representation of conditional distributions; Exact inference in Bayesian Networks; Approximate inference in Bayesian Networks;

Unit – IV

8 Hrs

8 Hrs

Introduction to machine learning: Well-posed learning algorithms; Designing a learning algorithm; Perspectives and Issues in machine learning;

Decision tree learning: Introduction, Decision tree representation; Appropriate problems for decision tree learning, The basic decision tree learning algorithm, Hypothesis space search in decision tree learning, Inductive bias in decision tree learning, Issues in decision tree learning;

Unit – V

Instance based learning: Introduction; k-nearest neighbor learning; Locally weighted regression; Radial based regression case-based functions;

Reinforcement learning: Introduction; The learning task; Q learning; Nondeterministic rewards and actions;

Laboratory Component

Open ended AI/Machine Learning based experiential project should be carried out in a team of two students, belongs to same batch of the laboratory of that particular section. (Cross-sections and Cross-batches not allowed)

General Guidelines for the project

The topic of the project should be from current thrust areas along with consultation with the faculty in charge.

There may be more than one batch solving same problem, but you need to have different approaches and the best approach will be ranked high.

The selected topic on the basis of standard papers (like IEEE/ACM/CSI etc.) is highly encouraged.

Presenting/publishing the paper in a reputed IEEE/ACM conferences / Journal with good indexing like WoS, SCI, Scopus, will attract higher marks in CIE.

The student needs to submit both hard & soft copy of the report for valuation.

All the batches must adhere to the guidelines released time to time by the Lab coordinators, and submit all the proofs asked in support of your experiential project.

Course	Course Outcomes: After completing the course, the students will be able to								
CO 1:	Describe the required theory and building blocks of Artificial intelligence technology and								
	Machine learning algorithms								
CO 2:	Demonstrate the working of various searching algorithms, games, pruning, inferencing, etc.								
	with suitable examples.								
CO 3:	Choose the suitable AI and machine learning technique for a given use case and analyze it's								
	performance while solving real world problems.								
CO 4:	Recommend and develop the AI and ML-based solutions for some of the well-posed								
	learning problems.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20.

Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Scheme of Continuous Internal Evaluation (CIE); Practical Test for 50 Marks

The Laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average marks (AM) over number of weeks is considered for 30 marks. At the end of the semester a test (T) is conducted for 10 marks. The students are encouraged to implement additional innovative experiments (IE) in the lab and are rewarded for 10 marks. Total marks for the laboratory is 50.

Total CIE is 30(AM) +10 (T) +10 (IE) =50 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Scheme of Semester End Examination (SEE); Practical Exam for 50 Marks

SEE for the practical courses will be based on experiment conduction with proper results, is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

Semester End Evaluation (SEE): Theory (100 Marks) + Practical (50 Marks) = Total 150 Marks

Cod	e Generatior	n and	optimization								

Issues in the design of Code Generator, The Target Language, Address in the target Code, Basic Blocks and Flow graphs, Optimization of Basic blocks, A Simple Code Generator, Peephole Optimization. Introduction to LLVM compiler and Clang.

Laboratory Component

Student should be able to design phases of compiler by incorporating following features:

- 1 Writing a scanner, writing predictive parser for a language constructs.
- 2 Experiment with scanner (lex/flex) and parser (yacc/byson) generators
- 3 Writing scanner-parse specification for a simple language constructs.
- 4 Translation of the language constructs to an intermediate form (e.g. three-address code),
- 5 Generation of target code (in assembly language) using compiler construction tools.
- 6 Code improvement and optimization using LLVM compiler.

Course	Course Outcomes: After completing the course, the students will be able to									
CO 1:	Understand and explore the fundamental concepts of compiler design and its									
	implementation.									
CO 2:	Identify and apply rules for designing various phases of compiler									
CO 3:	Analyse the practices adopted in constructing an efficient compiler.									
CO 4:	Implement and demonstrate in-depth knowledge of various technologies related to									
	principles, techniques and tools for designing compiler.

	Semester: VI							
	Minor Project							
Cou	Course Code : 18CS64 CIE : 50 Marks							
Crea	lits: L:T:P	:	0:0:2	SEE	:	50 Marks		
Hou	rs	:	26P	SEE Duration	:	02 Hours		
Cou	rse Learning (Dbje	ectives: To ena	ble the students to:		·		
1	 <i>Knowledge Application:</i> Acquire the ability to make links across different areas of knowledge and to generate, develop and evaluate ideas and information so as to apply these skills to the project task. 							
2	2 <i>Communication:</i> Acquire the skills to communicate effectively and to present ideas clearly and coherently to a specific audience in both the written and oral forms.							
3	Collaboration	ı:A	cquire collabor	ative skills through working in a team to achi	eve	e common goals.		
4	Independent Learning I earn on their own reflect on their learning and take appropriate action							

Guidelines for Minor Project

- 1. The minor project is to be carried out individually or by a team of two-three students.
- 2. Each student in a team must contribute equally in the tasks mentioned below.
- 3. Each group has to select a current topic that will use the technical knowledge of their program of study after intensive literature survey.
- 4. The project should result in system/module which can be demonstrated, using the available resources in the college.
- 5. The CIE evaluation will be done by the committee constituted by the department. The committee shall consist of respective guide & two senior faculty members as examiners. The evaluation will be done for each student separately.
- 6. The final copy of the report should be submitted after incorporation of any modifications suggested by the evaluation committee.

The minor-project tasks would involve:

- 1. Carry out the Literature Survey of the topic chosen.
- 2. Understand the requirements specification of the minor-project.
- 3. Detail the design concepts as applicable through appropriate functional block diagrams.
- 4. Commence implementation of the methodology after approval by the faculty.
- 5. Conduct thorough testing of all the modules developed and carry out integrated testing.
- 6. Demonstrate the functioning of the minor project along with presentations of the same.
- 7. Prepare a project report covering all the above phases with proper inference to the results obtained.
- 8. Conclusion and Future Enhancements must also be included in the report.

The students are required to submit the report in the prescribed format provided by the department.

Course	Course Outcomes: After completing the course, the students will be able to					
CO 1:	Interpreting and implementing the project in the chosen domain by applying the concepts					
	learnt.					
CO 2:	The course will facilitate effective participation by the student in team work and					
	development of communication and presentation skills essential for being part of any of the					
	domains in his / her future career.					
CO 3:	Appling project life cycle effectively to develop an efficient product.					
CO 4:	Produce students who would be equipped to pursue higher studies in a specialized area or					
	carry out research work in an industrial environment.					

Scheme of Evaluation for CIE Marks:

Evaluation will be carried out in three phases:

Phase	Activity	Weightage
Ι	Synopsis submission, approval of the selected topic, Problem	10M
	definition, Literature review, formulation of objectives, methodology	
II	Mid-term evaluation to review the progress of implementation,	15M
	design, testing and result analysis along with documentation	
III	Submission of report, Final presentation and demonstration	25M
	Total	50M

Scheme of Evaluation for SEE Marks:

Sl. No.	Evaluation Component	Marks
1.	Written presentation of synopsis: Write up	5M
2.	Presentation/Demonstration of the project	15M
3.	Demonstration of the project	20M
4.	Viva	05M
5.	Report	05M
	Total	50M

Course L	Course Learning Objectives: The students will be able to							
1	Gain knowledge of fundamental concepts in Fuzzy Logic.							
2	Illustrate fuzzy sets and fuzzy logic as mathematical models.							
3	Focus on problems related to various engineering, mathematics and science disciplines.							
4	Use fuzzy logic based techniques for various applications.							

Unit – I

Introduction

The case for Imprecision, The Utility and Limitations of Fuzzy Systems, Fuzzy sets and membership, Chance verses fuzziness, Sets as points in hyper cubes. Fuzzy Sets - Fuzzy set operations, Properties of Fuzzy Sets, Alternative fuzzy set operations, Membership value Assignments, Intuition, Inference, Features of the Membership Function

Fuzzy Relations

Fuzzy Relations, Cardinality of Fuzzy Relations, Operations on Fuzzy Relations, Properties of Fuzzy Relations, Fuzzy Cartesian product and Composition, Fuzzy Tolerance and equivalence Relations. Value Assignments - Cosine Amplitude, Max-min Method

Fuzzification and Defuzzification

Fuzzification, defuzzification to crisp sets, Lambda-cuts for fuzzy relations, Defuzzification to Scalars **Fuzzy Logic and Fuzzy Systems**

Unit – II

Classical Logic - Tautologies, Contradictions, Equivalence, Exclusive or and Exclusive Nor, Logical Proofs, Deductive Inferences. Fuzzy Logic, approximate reasoning, other forms of the Implication Operation, Fuzzy Systems: Natural Languages, Fuzzy (Rule -Based) systems.

Unit – III	08Hrs
Fuzzy Arithmetic and Extension Principle	
Extension principle, Crisp Function, Mapping and Relations, Function of fuzzy sets- Extension p	orinciple,
fuzzy transform, practical considerations, fuzzy arithmetic, internal analysis in arithmetic, Approx	timate of
extension.	
Fuzzy Soft Sets	
Soft Sets and Fuzzy Soft Sets - Soft sets and Fuzzy Soft set operations, Properties of soft sets and	nd Fuzzy
Soft Sets, Cartesian product of soft sets and fuzzy soft sets, Fuzzy Soft set Relations, Operations of	on Fuzzy
Soft Set Relations, Composition of fuzzy Soft Set relation.	
	011
Unit – IV	8Hrs
Fuzzy Classification and Pattern Recognition	

Classification of Equivalence relations, Crisp Relations and Fuzzy Relations, Cluster Analysis, Cluster Validity, c-means clustering, Hard c-means, Fuzzy c-means algorithm, cluster validity, Knowledge based pattern recognition, Hybrid pattern based recognition, applications in Medical Image Segmentation: case study of hybrid fuzzy system for MRI segmentation. 8Hrs

Unit – V

Fuzzy Logic and Artificial Intelligence

07Hrs

08Hrs

AI, Neural Network, genetic Algorithms, Fuzzy logic in frame based representation, FL in expert systems, Intelligent Agents, FL in Intelligent systems.

Fuzzy Logic in Database and Information Systems

Fuzzy information, FL in database systems, fuzzy relation data models and its operations,

Course	Outcomes: After completing the course, the students will be able to
CO 1:	Explore and Understand basic concepts of all types of fuzzy sets and relations, fuzzy logic
	extension principle in the field of computer science and Engineering.
CO 2:	Analyse the tools of all types of fuzzy sets in different areas of intelligent information systems
	where uncertainty and imprecision are involved.
CO 3:	Design fuzzy systems and solve complex problems using various fuzzy techniques.
CO 4:	Create application by utilizing cloud platforms. Apply fuzzy systems and solve complex
	problems using various fuzzy techniques.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20.

Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marksis executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Cou	rse Learning	Obj	ectives: The students v	will be able to		
1.	To understan	nd tł	ne concepts of data war	ehousing and data mining.		
2.	2. To learn different classification techniques adopted for data mining.					
3.	To learn the	visı	alization techniques in	data mining		

Unit – I	8 Hrs

Data Warehouse : Introduction to Data Warehouse, Differences between Operational Database Systems and Data Warehouses, A Separate Data Warehouse, Data Warehousing : A Multitier Architecture, Data Warehouse Models: Enterprise Warehouse, Data Mart, and Virtual Warehouse, Extraction, Transformation, and Loading, Metadata Repository

Data Warehouse Modelling: Data Cube and OLAP; Data Cube : A Multidimensional Data Model, Stars, Snowflakes, and Fact Constellations: Schemas for multidimensional Data Models, Dimensions: The Role of Concept Hierarchies, Typical OLAP Operations, A Starnet Query Model for Querying Multidimensional Databases.

Introduction to Data Mining:Kinds of data,kinds of patterns,technologies used,Application	ons,Major
Issues in Data Mining.	-

Data Objects and Attribute Types, Basic Statistical Descriptions of Data, Data Preprocessing: An Overview, Data Cleaning, Data Integration, Data Reduction, Data Transformation and Data Discretization

Unit – III

Unit – II

Mining Frequent Patterns, Associations, and Correlations: Basic Concepts, Frequent Itemset Mining Methods, Pattern Evaluation Methods

Basic concepts of classification:Decision Tree Induction, Bayesian Classification, Rule based Classification, Model Evaluation and selection, Techniques to improve classification accuracy

Unit – IV	8 Hrs
Classification: Advanced Methods: Bayesian Belief Networks, Classification by Back pr	opagation,
Support Vector Machines, Classification Using Frequent Patterns	
Unit – V	7 Hrs

Cluster Analysis: Basic Concepts and Methods: Cluster Analysis, Partitioning Methods, Hierarchical Methods, Density-Based Methods

Course	Course Outcomes: After completing the course, the students will be able to						
CO 1:	Understand the concepts of data warehousing and data mining.						
CO 2:	To apply the classification and clustering algorithms for the historical data.						
CO 3:	To identify hidden patterns in the huge data.						
CO 4:	To visualize and draw inference from the knowledge extracted for decision making.

3.	Learn the o	defin	itions and synt	x of different web pro	ogramming tools	suc	h as JavaScript,		
	XML, Ajax, Angular JS and Node.js to design web pages.								
4.	Design and	i dev	velop interactiv	e, client-side, server-si	ide executable we	eb	applications using		
	different tec	chniq	ues such as CS	, JavaScript, XML, Aja	x, Angular JS and	No	de.js.		

Unit-I	08Hrs
Introduction to Web, HTML and XHTML:	
Fundamentals of Web, XHTML: Basic syntax, Standard structure, Basic text markup,	Images,
Hypertext Links, Lists, Tables, Forms, Frames.HTML 5: The audio Element; The video I	
Organization Elements; The time Element, Syntactic Differences between HTML and XHTM	L.
CSS (Cascading Style Sheet):Introduction, Levels of style sheets, Style specification	formats,
Selector forms, Property value forms, Font properties, List properties, Color, Alignment of t	ext, The
box model, Background images, The and <div> tags, Conflict resolution.</div>	
Unit – II	08Hrs
The Basics of JavaScript:	
Overview of JavaScript; Object orientation and JavaScript; General syntactic charac	teristics;
Primitives, operations, and expressions; Screen output and keyboard input; Control statements	š.
JavaScript (continued):Object creation and modification; Arrays; Functions; Constructor	; Pattern
matching using regular expressions; Errors in scripts.	
Unit –III	08 Hrs
JavaScript and HTML Documents:	
The JavaScript execution environment; The Document Object Model; Element access in Jav	vaScript;
Events and event handling; Handling events from the Body elements, Button elements, Text	box and
Password elements; The DOM 2 event model; The navigator object.	
Dynamic Documents with JavaScript: Introduction to dynamic documents; Positioning e	
Moving elements; Element visibility; Changing colors and fonts; Dynamic content;	
elements; Locating the mouse cursor; Reacting to a mouse click; Slow movement of e	lements;
Dragging and dropping elements and Introduction to jQuery.	
Unit –IV	08Hrs
Introduction to PHP:	_
Origins and uses of PHP; overview of PHP; General syntactic characteristics; Primitives, Or	
and Expressions; Output; Control statements; Arrays; Functions; Pattern Matching	g; Form
Handling;Cookies; Session Tracking.	
XML:Introduction; Syntax; Document structure; Document Type definitions; Namespace	
schemas; Displaying raw XML documents; Displaying XML documents with CSS; XSI	LT style
sheets.	
	07 Hrs
Ajax: Overview of Ajax; History of Ajax; Ajax Technology; Implementing Ajax, Basics of A	5
Application; The Form Document; The Request Phase; The Response Document; The	Keceiver
Phase; Cross-Browser Support.	

Database Access through the web: Architectures for Database Access: Client Server Architecture; The Microsoft open Database Connectivity; PHP and Database Access; The Java JDBC Architecture; The MySQL Database System, Database Access with PHP and MySQL.

Course O	Outcomes: After completing the course, the students will be able to
CO1:	Understand the basic syntax and semantics of HTML/XHTML.
CO2:	Apply HTML/XHTML tags for designing static web pages and forms using Cascading
	Style Sheet.
CO3:	Develop Client-Side Scripts using JavaScript and Server-Side Scripts using PHP and
	utilize the concepts of XML & Ajax to design dynamic web pages.
CO4:	Develop web based applications using PHP, XML and Ajax.

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20.

Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marksis executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Semester: VI							
	PROBABILITY, STATISTICS AND QUEUING THEORY						
		(Gro	oup D: Professional 1	Elective)			
Course Code	:	18CS6D4		CIE Marks	:	100	
Credits: L:T:P	:	3 :0:0		SEE Marks	:	100	
Total Hours	:	39L		SEE Duration	:	3 Hrs	

Course Learning Objectives: The students will be able to

Understand the basics of Probability, Statistics and Queuing theory.

Evaluate probability bounds, basic statistical measures and demonstrate their significance.

Design and perform hypothesis tests and other evaluative tests.

Develop probability models for solving real world problems.

UNIT-I	08Hrs
Introduction of Probability and Random Variables: Axioms of probability, Co	onditional
probability, Baye's theorem, Discrete Random variable and Continuous Random variable,pr	nf, pdf of
some well-known distributions, Moment Generating Functions, Two-dimensional Random	variables,
Joint pmf and Joint pdf and their properties, Conditional distributions and conditional exp	ectations,
Covariance.	
UNIT-II	09Hrs

	07 1110
Probability bounds, Approximations, Testing Hypothesis and Regression: Probability ined	qualities -
Markov's inequality, Chernoff bounds, Jensen's inequality, Chebyshev's inequality, Bi	enayme's
inequality, Schwartz inequality, Cauchy-Schwartz inequality, sampling theory, Confidence	intervals
and Testing Hypothesis (Mean σ known and σ unknown, Standard deviation), Simp	ole linear
regression, Multiple linear regression,-assumptions, estimation of coefficients, coeff	icient of
determination and adjusted coefficient of determination.	

UNIT-III	08Hrs
Random Processes: Classification, Methods of description, Special classes, Average	values of
Random Processes, Analytical representation of Random Process, Autocorrelation function	on, Cross-
correlation function and their properties, Ergodicity, Poisson process, Counting processes, Int	ter-arrival
and waiting time distributions, Markov Process, Markov chain.	
UNIT-IV	07Hrs

Queuing Theory:Symbolic Representation of a Queuing Model, Poisson Queue system, Little Law, Types of Stochastic Processes, Birth-Death Process, The M/M/1 Queue, M/M/m Queue, M/M/m/B Queue with Finite Buffers.

UNIT-V07HrsRandom Number Generation:Desired Properties of a Good Generator, Linear-Congruential
Generators, Tausworthe Generators, Extended Fibonacci Generators, Combined Generators, Testing
Random Number Generators: Chi-Square Test, Kolmogorov-Smirnov.

Course	e Outcomes: After completing the course, the students will be able to
CO1.	Identify basic tools of Probability and queuingin the fields where uncertainty and imprecision
	are involved.
CO2.	Apply random process, sampling theory, stochastic process and queuing models to the field of
	computer science.
CO3.	Apply probability models using modern tools of probability for synthesizing information to
	use effectively.
CO4.	Analyze and design probability models for various real world problems involving
	randomness.

Cou	rse Code	:	18CS6D5	CIE Ma	arks :	100		
Crea	lits: L:T:P	:	3:0:0	SEE Ma	arks :	100		
Total Hours		:	39L	SEE Du	ration :	3 Hrs		
Cou	rse Learning	Obj	jectives: The stu	lents will be able to				
1.	1. To understand Basic Programming concepts and the underlying logic/structure							
2.	2. To Describe RPA, where it can be applied and how its implemented							
3.	3. To Describe the different types of variables, Control Flow and data manipulation techniques							
4.	To Describe	aut	omation to Emai	and various types of Exception	ons and strateg	ies to handle		

Unit – I8 HrsPROGRAMMING BASICS &RECAP:Programming Concepts Basics - Understanding the
application - Basic Web Concepts - Protocols - Email Clients -. Data Structures - Data Tables -
Algorithms - Software Processes - Software Design - Scripting - .Net Framework - .Net Fundamentals
- XML - Control structures and functions - XML - HTML - CSS - Variables & Arguments.

Unit – II8 HrsRPA Concepts: RPA Basics - History of Automation - What is RPA - RPA vs Automation -
Processes & Flowcharts - Programming Constructs in RPA - What Processes can be Automated -
Types of Bots - Workloads which can be automated - RPA Advanced Concepts - Standardization of
processes - RPA Development methodologies - Difference from SDLC - Robotic control flow
architecture - RPA business case - RPA Team - Process Design Document/Solution Design Document
- Industries best suited for RPA - Risks & Challenges with RPA - RPA and emerging ecosystem.

Unit – III8 HrsRPA TOOL INTRODUCTION & BASICS: Introduction to RPA Tool - The User Interface -
Variables - Managing Variables - Naming Best Practices - The Variables Panel - Generic Value
Variables - Text Variables - True or False Variables - Number Variables - Array Variables - Date and
Time Variables - Data Table Variables - Managing Arguments - Naming Best Practices - The
Arguments Panel - Using Arguments - About Imported Namespaces - Importing New Namespaces-
Control Flow - Control Flow Introduction - If Else Statements - Loops - Advanced Control Flow -
Sequences - Flowcharts - About Control Flow - Control Flow Activities - The Assign Activity - The
Delay Activity - The Do While Activity - The If Activity - The Switch Activity - The While Activity -
The For Each Activity - The Break Activity - Data Manipulation - Data Manipulation Introduction -
Scalar variables, collections and Tables - Text Manipulation - Data Manipulation - Gathering and
Assembling Data

Unit –	IV
--------	----

8 Hrs

ADVANCED AUTOMATION CONCEPTS AND TECHNIQUES :

Recording and Advanced UI Interaction - Recording Introduction - Basic and Desktop Recording -Web Recording - Input/output Methods - Screen Scraping - Data Scraping - Scraping advanced techniques - Selectors - Selectors - Defining and Assessing Selectors - Customization - Debugging -Dynamic Selectors - Partial Selectors - RPA Challenge - Image, Text & Advanced Citrix Automation - Introduction to Image & Text Automation - Image based automation - Keyboard based automation -Information Retrieval - Advanced Citrix Automation challenges - Best Practices - Using tab for Images - Starting Apps - Excel Data Tables & PDF - Data Tables in RPA - Excel and Data Table basics - Data Manipulation in excel - Extracting Data from PDF - Extracting a single piece of data -Anchors - Using anchors in PDF

Unit – V	7 Hrs
EMAIL AUTOMATION & EXCEPTIONAL: Email Automation - Email Automation -	Incoming
Email automation - Sending Email, automation - Debugging and Exception Handling - I	Debugging
Tools - Strategies for solving issues - Catching errors.	

Course	Outcomes: After completing the course, the students will be able to
CO 1:	Understand RPA principles, its features and applications.
CO 2:	Demonstrate proficiency in handling several types of variables inside a workflow and data
	manipulation techniques
CO 3:	Gain insights into Desktop, Web, Citrix, Email Automation and exception handling.
CO 4:	Analyze and design a real-world automation project and debug the workflows.

Refer	ence Books:

Hours		:	39L	SI	EE Duration		3.00 Hours				
Cou	rse Learning O	bje	ectives: To ena	ble the students to:							
1 List the various systems involved in the design of an aircraft											
2	Demonstrate the technical attributes of all the subsystems of an aircraft										
3	Explain the sig	Explain the significance of each systems and its subsystems for developing an airplane									
4	Demonstrate t	Demonstrate the integration of the systems with the airplane									

Unit-I	07Hrs							
Flight Control Systems: Primary and secondary flight controls, Flight control linkage system,								
Conventional Systems, Power assisted and fully powered flight controls.								
Unit – II	10Hrs							
Aircraft Hydraulic & Pneumatic Systems: Components of a typical Hydraulic system, Working or								
hydraulic system, Power packs, Hydraulic actuators. Pneumatic system and components, Use of bleed								
air, Landing gear and braking, Shock absorbers-Retraction mechanism.								
Unit -III								
Aircraft Fuel Systems: Characteristics of aircraft fuel system, Fuel system and its components,								
Gravity feed and pressure feed fuel systems, Fuel pumps-classification, Fuel control unit.								
Unit -IV 07Hrs								
Environmental Control Systems: Air-conditioning system, vapour cycle system, de-icing and anti-								
icing system, Fire detection- warning and suppression. Crew escape aids.								
Engine Systems: Engine starting sequence, Starting and Ignition systems, Engine oils and a typical lubricating system.								
Tubhcanng System.								
Unit -V	07Hrs							
Unit -V								
Unit -V Aircraft Instruments : Instruments displays, panels & layouts, Instrumentation grouping, N	lavigation							

sensing, stall warning, Mach warning, altitude alerting system.

Course Outcomes:

At the end of this course the student will be able to :

CO1:	Categorise the various systems required for designing a complete airplane									
CO2:	Comprehend the complexities involved during development of flight vehicles.									
CO3:	Explain the role and importance of each systems for designing a safe and efficient flight vehicle									
CO4:	Demonstrate the different integration techniques involved in the design of an air vehicle

Unit-I	08 Hrs
Introduction to biological systems: General and Special biomolecules, Plant, an	imal and
microbial cell types, Somatic and Sensory system. Plant process - Photosynthesis. Neural	networks,
Neuron models-Signal encoding architecture, Synaptic plasticity-Supervised, unsuper	vised and
reinforcement learning, Evolution of artificial neural networks-Hybrid neural systems	with case
study Harvesting Desert Fog.	
Unit – II	08 Hrs
Introduction to Biomimetics: Introduction to micro architectural aspects. Structures and	l physical
functions of biological composites of engineering – related case study: Camera from eyes	, clothing
designs and hooks from Velcro Criteria for future materials design and processing. Con	mputation
Cellular systems: Cellular automata - modelling with cellular systems with cellular s	systems –
artificial life – analysis and synthesis of cellular systems: Nature's Water Filter.	
Unit –III	08 Hrs
Engineering of synthetic organs: Growth, development and principle of artificial skins	s, hearing
aids, artificial limbs, artificial lungs and artificial lever. Implants-working principle of pa	acemaker,
Breast Implants, Artificial Eye Lenses, Blood sugar monitoring, artificial heart. Appl	ication of
Spine Screws, Rods and Artificial Discs, Metal Screws, Pins, Plates and Rods	
Unit –IV	07 Hrs
Biosimilars: Introduction, characteristics and bioequivalence. Criteria for Bioequivalence.	uivalence,
Development of Biosimilars, Statistical Methods for Assessing Biosimilarity, I	ssues on
Immunogenicity Studies, Regulatory Requirements, Stability Analysis of Biosimilar	Products,
Challenges involved in Biosimilars.	
Unit –V	08 Hrs
Biomechatronics: Introduction to MEMS based devices, Evolution of behavioural	systems,
learning in behavioural systems – co evolution of body and control. Behaviour in cognitiv	ve science
and artificial intelligence. Biological inspiration for robots, Robots as biological mo	
robotics behaviour, Application of sleek scale of shark skin.	
Course Outcomest After completing the course the students will be able to	

Course	Course Outcomes: After completing the course, the students will be able to						
CO1:	Remember and explain the concepts of biological and physiological processes						
CO2:	Elucidate the basic principles for design and development of biological systems.						
CO3:	Differentiate biological phenomena to support inspiration for visual and conceptual design problems						

CO4:	Develop technical solutions to customer needs by utilizing a variety of bio-inspiration
	techniques.

2

- Model problems using graphs and to solve these problems algorithmically. Apply graph theory concepts to solve real world applications like routing, TSP/traffic control, 3 etc.
- Optimize the solutions to real problems like transport problems etc., 4

UNIT-I	07 Hrs
Introduction to graph theory	
Introduction, Mathematical preliminaries, definitions and examples of graphs, degree	es and regular
graphs, sub graphs, directed graphs, in degrees and out degrees in digraphs.	C
Basic concepts in graph theory	
Paths and cycles, connectivity, homomorphism and isomorphism of graphs, connectivity	y in digraphs.
UNIT-II	09 Hrs
Graph representations, Trees, Forests	·
Adjacency matrix of a graph, Incidence matrix of a graph, Adjacency lists, Trees and	d properties of
trees, Characterization of trees, Centers of trees, Rooted trees, Binary threes, Spann	ning trees and
forests, Spanning trees of complete graphs, An application to electrical networks, I	Minimum cos
spanning trees.	
UNIT-III	09 Hrs
Fundamental properties of graphs and digraphs	•
Bipartite graphs, Eulerian graphs, Hamiltonian graphs, Hamiltonian cycles in wei	ighted graphs
Eulerian digraphs.	0 0 1
Planar graphs, Connectivity and Flows	
Embedding in surfaces, Euler's formula, Characterization of planar graphs, Kuratow	ski's theorem
Dual of a planar graphs.	
UNIT-IV	07 Hrs
Matchings and Factors	
Min-Max theorem, Independent sets and covers, Dominating sets, maximum bipartite m	atching.
Coloring of graphs	
The chromatic number of a graph, Results for general graphs, The chromatic polynom	ial of a graph
Basic properties of chromatic polynomial, chordal graphs, powers of graphs, Edge color	ing of graphs
UNIT-V	07Hrs
Graph algorithms	
Graph connectivity algorithms, Breadth first search and Depth first search, Shortest pa	ath algorithms
Dijikstra's shortest path algorithm, Minimum cost spanning tree algorithms, Algorithm	•
and Prim's.	
Course Outcomes: After completing the course, the students will be able to	
CO1. Understand and explore the basics of graph theory.	

Course	Course Outcomes: After completing the course, the students will be able to						
CO1.	Understand and explore the basics of graph theory.						
CO2.	Analyse the significance of graph theory in different engineering disciplines						
CO3.	Demonstrate algorithms used in interdisciplinary engineering domains.						
CO4.	Evaluate or synthesize any real world applications using graph theory.

1	Understand th	ne r	eed for energy audi	t, energy manageme	nt and the concepts	of t	ooth.		
2	Explain Proce	esse	es for energy audit o	of electrical systems.					
3	3 Design and develop processes for energy audit of mechanical systems.								
4	Prepare the fo	orm	at for energy audit of	of buildings and ligh	ting systems.				

Unit-I 06 Hrs						
Types of Energy Audit and Energy-Audit Methodology: Definition of Energy Audit, Place of						
Audit, Energy – Audit Methodology, Financial Analysis, Sensitivity Analysis, Project Financing						
Options, Energy Monitoring and Training.						
Survey Instrumentation: Electrical Measurement, Thermal Measurement, Light Measurement, Light Measurement, Light Measurement, Light Measurement, Light Measurement, Light Measurement, Measurement, Light M	urement,					
Speed Measurement, Data Logger and Data Acquisition System,						
Energy Audit of a Power Plant: Indian Power Plant Scenario, Benefit of Audit, Types of						
Power Plants, Energy Audit of Power Plant.						
Unit – II	10 Hrs					
Electrical Load Management: Electrical Passiag Electrical Load Management, Variable	•					

Electrical-Load Management: Electrical Basics, Electrical Load Management, Variable-Frequency Drives, Harmonics and its Effects, Electricity Tariff, Power Factor, Transmission and Distribution Losses.

Energy Audit of Motors: Classification of Motors, Parameters related to Motors, Efficiency of a Motor, Energy Conservation in Motors, BEE Star Rating and Labelling.

Energy Audit of Pumps, Blowers and Cooling Towers: Pumps, Fans and Blowers, Cooling Towers

Unit -III 10 Hrs
Energy Audit of Boilers: Classification of Boilers, Parts of Boiler, Efficiency of a Boiler, Role
of excess Air in Boiler Efficiency, Energy Saving Methods.
Energy Audit of Furnaces: Parts of a Furnace, classification of Furnaces, Energy saving
Measures in Furnaces, Furnace Efficiency
Energy Audit of Steam-Distribution Systems :S team as Heating Fluid, Steam Basics,
Requirement of Steam, Pressure, Piping, Losses in Steam Distribution Systems, Energy
Conservation Methods
Unit –IV 07 Hrs
Unit –IV 07 Hrs Compressed Air System: Classification of Compressors, Types of Compressors, Compressed
Compressed Air System: Classification of Compressors, Types of Compressors, Compressed
Compressed Air System : Classification of Compressors, Types of Compressors, Compressed Air – System Layout, Energy – Saving Potential in a Compressed – Air System.
Compressed Air System : Classification of Compressors, Types of Compressors, Compressed Air – System Layout, Energy – Saving Potential in a Compressed – Air System. Energy Audit of HVAC Systems: Introduction to HVAC, Components of Air – Conditioning

Unit –V06 HrsEnergy Audit of Lighting Systems: Fundamentals of Lighting, Different Lighting Systems,
Ballasts, Fixtures (Luminaries), Reflectors, Lenses and Louvres, Lighting Control Systems,
Lighting System Audit, Energy Saving Opportunities.06 Hrs

Energy Audit Applied to Buildings: Energy – Saving Measures in New Buildings, Water Audit, Method of Audit, General Energy – Savings Tips Applicable to New as well as Existing Buildings.

Course	Course Outcomes: After completing the course, the students will be able to								
CO1:	: Explain the need for energy audit, prepare a flow for audit and identify the instruments								
	needed.								
CO2:	Design and perform the energy audit process for electrical systems.								
CO3:	Design and perform the energy audit process for mechanical systems								
CO4 :	Propose energy management scheme for a building

3.	Develop and	Doc	cument the knowled	ge base for effective s	ystems engine	ering	g processes.	
4.								
5.	Create the fra	me	works for quality pro	ocesses to ensure high	reliability of s	syste	ems.	

UNIT-I	06 Hrs
System Engineering and the World of Modem System: What is System Engineering?, Or	rigins of
System Engineering, Examples of Systems Requiring Systems Engineering, System Eng	ineering
viewpoint, Systems Engineering as a Profession, The power of Systems Engineering, problem	s.
Structure of Complex Systems: System building blocks and interfaces, Hierarchy of C	Complex
systems, System building blocks, The system environment, Interfaces and Interactions.	
The System Development Process: Systems Engineering through the system Life Cycle, Evol	utionary
Characteristics of the description of the sector of the sector of the sector of the description of the sector of t	

Characteristics of the development process, The system engineering method, Testing throughout system development, problems.

UNIT – II10 HrsSystems Engineering Management: Managing systems development and risks, Work breakdownstructure (WBS), System Engineering Management Plan (SEMP), Risk Management, Organization ofSystems Engineering, Systems Engineering Capability Maturity Assessment, Systems Engineeringstandards, Problem.

Needs Analysis: Originating a new system, Operations analysis, Functional analysis, Feasibility analysis, Feasibility definition, Needs validation, System operational requirements, problems.

Concept Exploration: Developing the system requirements, Operational requirements analysis, Performance requirements formulation, Implementation concept exploration, Performance requirements validation, problems.

UNIT – III10 HrsConcept Definition: Selecting the system concept, Performance requirements analysis, Functional
analysis and formulation, Concept selection, Concept validation, System Development planning,
System Functional Specifications, problems10 Hrs

Advanced Development: Reducing program risks, Requirements analysis, Functional Analysis and Design, Prototype development, Development testing, Risk reduction, problems.

UNIT – IV	07 Hrs
Engineering Design: Implementing the System Building blocks, requirements analysis, Fu	nctional
analysis and design, Component design, Design validation, Configuration Management, proble	ems.
Integration and Evaluation: Integrating, Testing and evaluating the total system, Test plan	ning and
preparation, System integration, Developmental system testing, Operational test and eva	aluation,
problems.	
LINIT – V	06 Hrs

Production: Systems Engineering in the factory, Engineering for production, Transition from development to production, Production operations, Acquiring a production knowledge base, problems.

Operations and support: Installing, maintenance and upgrading the system, Installation and test, Inservice support, Major system upgrades: Modernization, Operational factors in system development, problems.

Course	Course Outcomes: After completing the course, the students will be able to					
CO1:	Understand the Life Cycle of Systems.					
CO2:	Explain the role of Stake holders and their needs in organizational systems.					
CO3:	Develop and Document the knowledge base for effective systems engineering processes.					
CO4:	Apply available tools, methods and technologies to support complex high technology systems.					
CO5:	Create the frameworks for quality processes to ensure high reliability of systems.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and experiential learning (EL). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for experiential learning is 20. **Total CIE is 30(Q) + 50(T) + 20(EL) = 100 Marks.**

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part A and Part B. Part A consists of objective type questions for 20 marks covering the complete syllabus. Part B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Course	e Outcomes: After completing the course, the students will be able to
CO1:	Comprehend the basic features of android platform and the application development process.
	Acquire familiarity with basic building blocks of Android application and its architecture.
CO2:	Apply and explore the basic framework, usage of SDK to build Android applications incorporating
	Android features in developing mobile applications.
CO3:	Demonstrate proficiency in coding on a mobile programming platform using advanced Android
	technologies, handle security issues, rich graphics interfaces, using debugging and troubleshooting
	tools.
CO4:	Create innovative applications, understand the economics and features of the app marketplace by
	offering the applications for download.

Credits: L:T:P :		:	3:0:0	SEE	:	100 Marks		
Tota	Total Hours :		39 L	SEE Duration	:	3.00 Hours		
Cou	rse Learning (Dbj	ectives: The students will	be able to				
1	Identify the v	ario	ous types of Actuators, ser	nsors and switching devices us	sed in	n industrial		
	automation.							
2	Understand	the	fundamentals of CNC, PL	C and Industrial robots.				
3	3 Describe the functions of hardware components for automation							
4	Prepare simple manual part programs for CNC and Ladder logic for PLC.							
5	Demonstrate	the	ability to develop suitable	e industrial automation system	is usi	ng all the concepts		

Unit-I	06 Hrs
Overview of Automation in Industry	
Basic kinds of Industrial type equipment, automation and process control, mechanization vs au	tomation.
continuous and discrete control, basic elements of an automated system, advanced automation	functions,
levels of automation, basic automation circuits.	
Unit-II	10 Hrs
Sensors and Industrial Switching elements.	
Sensor terminology, Classification of sensors and transducers, Limit switch, Temperature s	ensors,
Light sensors, position sensors, inductive and capacitive proximity sensors, optical encoders,	Relays,
Solenoids, moving part logic elements, fluidic elements, timers, comparisons between sw	vitching
elements.	
Industrial Automation Synthesis	
Introductory principles, basic automation examples, meaning of the electrical and mechanical	latch,
automation circuits with sensors, design regulations and implementation.	
Unit-III	10 Hrs
Logical Design of Automation Circuits	
Postulates and theorems of Boolean algebra, Classical state diagrams, state diagrams with sens	ors, step
by step transition due to discrete successive signal, state diagram with time relays, compone	nts state
diagram method, state diagrams and minimum realisations, sequential automation s	systems,
Applications - Bi directional lead screw movable worktable with two speeds, Palindromic mo	ovement
of a worktable with memory.	
Elements of electro pneumatic actuation	
Basic elements of pneumatic system, pneumatic cylinders, Symbolic representations of pneum	atic and
electrical switching devices, Indirect control of double acting cylinders, memory control	circuit,
cascading design, automatic return motion, quick exhaust valve circuit, and cyclic operat	ion of a
cylinder, pressure sequence valve and time delay valve circuits. Automatic return motion, Se	parating
similar balls, Stamping device.	
Unit-IV	06 Hrs
Numerical Control and Robotics	·
Numerical control, components of CNC, classification, coordinate systems, motion control str	ategies,
	-

Numerical control, components of CNC, classification, coordinate systems, motion control strategies, interpolation, NC words, Simple part programming for turning, milling and drilling. Components of the robot, base types, grippers, Configurations and simple programming using VAL.

Unit-V	07 Hrs

Programmable logic control systems

Internal structure, principles of operation, latching, ladder diagrams, programming instructions, types of timers, forms of counters, writing simple ladder diagrams from narrative description and Boolean logic. Programming exercises on motor control in two directions, traffic control, cyclic movement of cylinder, conveyor belt control, alarm system, sequential process, and continuous filling operation on a conveyor.

Course	Course Outcomes: After completing the course, the students will be able to						
CO1:	Recall and Illustrate the application of sensors actuators, switching elements and inspection						
	technologies in industrial automation.						
CO2:	Build the circuit diagrams for fluid power automation, Ladder diagrams for PLC and						
	identify its application areas.						
CO3:	Evaluate CNC part programs for 2D complex profiles, perform machining and turning						
	centres interfaced with Robots.						
CO4:	Develop a suitable industrial automated system integrating all of the above advanced						
	automation concepts

Course	e Outcomes: After completing the course, the students will be able to
CO1:	Understanding the fundamentals of advanced batteries, super capacitors and fuel cells for electric
	vehicles.
CO2:	Applying the chemistry knowledge used for hybridization of various energy storage and conversion
	devices for vehicle electrification.
CO3:	Analyses of battery management, safety, global market trends for large format batteries.
CO4:	Evaluation of efficiency of a battery with respect to cost, environmental safety, material, energy
	consumption, reuse and recycling.

CIE is executed by the way of Tests (T), Quizzes (Q),) and Experiential Learning (EL). Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. Minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The marks component for experiential learning is 20.

Total CIE is 50 (T) +30 (Q) +20 (EL) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Problem-Solution Fit and Building MVP	
Blue Ocean Strategy - Plotting the Strategy Canvas; Four Action Framework: Eliminate-Reduce	-Raise-
Create Grid of Blue Ocean Strategy; Building Solution Demo and Conducting Solution Interview	vs;
Problem-Solution Fit; Building MVP; Product-Market Fit; Presenting MVP.	
Unit – IV	07 Hrs
Financial Planning & Team Building	
Cost Structure - Estimating Costs; Revenues and Pricing: Revenue Streams, Revenue Types, Ide	ntifying
Secondary Revenue Streams, Estimating Revenue and Price; Profitability Checks; Bootstrapping	and
Initial Financing; Practising Pitch; Shared Leadership; Hiring and Fitment, Team Role and	
Responsibilities.	
Unit – V	09 Hrs
Marketing, Sales, Regulations and Intellectual Property	
Positioning and Branding; Channels; Sales Planning; Project Management; Basics of Business	

Regulations; How to Get Help to Get Started; Patents, Trademark, Licensing, Contracts; Common Legal mistakes, Types of Permits, Tax Registration Documents, Compliance; Infringement and Remedies, Ownership and Transfer.

Course	Course Outcomes: After completing the course, the students will be able to				
CO1	Showcase the ability to discern distinct entrepreneurial traits				
CO2	Know the parameters to assess opportunities and constraints for new business ideas				
CO3	Understand the systematic process to select and screen a business idea				
CO4	Design strategies for successful implementation of ideas				
CO5	Create Business Model and develop Minimum Viable Product

Cou	rse Outcomes: After completing the course, the students will be able to						
COI	Inculcate employability skill to suit the industry requirement.						
CO2	Analyze problems using quantitative and reasoning skills						
CO3	: Exhibit verbal aptitude skills with appropriate comprehension and application.						
CO4	: Focus on Personal Strengths and Competent to face interviews and answer						
Refe	rence Books

Scheme of Continuous Internal Examination and Semester End Examination

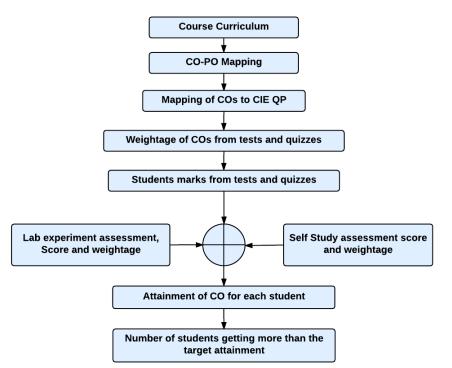

Phase	Activity	Weightage
Phase I	CIE will be conducted during the 5 th semester and evaluated for 50	50%
V Sem	marks. The test will have two components. The Quiz is evaluated for	
	15 marks and second component consisting of questions requiring	
	descriptive answers is evaluated for 35 marks. The test & quiz will	
	assess the skills acquired through the training module.	
	SEE is based on the test conducted at the end of the 5 th semester The	
	test will have two components a Quiz evaluated for 15 marks and	
	second component consisting of questions requiring descriptive	
	answers is evaluated for 35 marks.	
Phase II	During the 6 th semester a test will be conducted and evaluated for 50	50%
VISem	marks. The test will have two components a Short Quiz and Questions	
	requiring descriptive answers. The test & quiz will assess the skills	
	acquired through the training module.	
	SEE is based on the test conducted at the end of the 6 th semester The	
	test will have two components. The Quiz evaluated for 15 marks and	
	second component consisting of questions requiring descriptive	
	answers is evaluated for 35 marks	
Phase III	At the end of the VI Sem Marks of CIE (5 th Sem and 6 th Sem) is consolidated for 50	
At the	marks (Average of Test1 and Test 2 (CIE 1+CIE2)/2.	
end of	At the end of the VISem Marks of SEE (5 th Sem and 6 th Sem) is consolidated for 50	
VISem	marks (Average of CIE 1 and CIE 2 (CIE 1+CIE2)/2.	

Curriculum Design Process

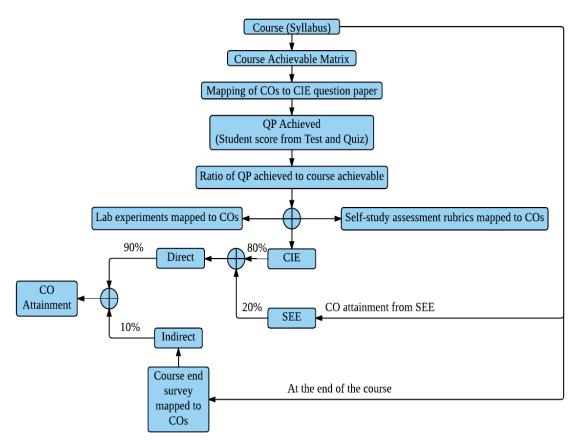

Academic Planning And Implementation

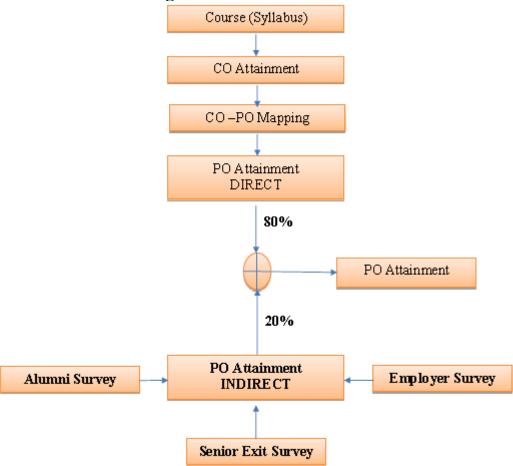

Process For Course Outcome Attainment

Program Outcome Attainment Process

PROGRAM OUTCOMES (POs)

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation for the solution of complex engineering problems.

2. **Problem analysis:** Identify, formulate, research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety, and cultural, societal, and environmental considerations.

4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modelling to complex engineering activities, with an understanding of the limitations.

6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with the society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. Life-long learning: Recognise the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
