

RV COLLEGE OF ENGINEERING[®] (Autonomous Institution Affiliated to VTU, Belagavi) R.V. Vidyaniketan Post, Mysore Road Bengaluru – 560 059

Bachelor of Engineering (B.E) Scheme and Syllabus of VII and VIII Semesters 2016 Scheme

ELECTRICAL & ELECTRONICS ENGINEERING

VISION

Leadership in Quality Technical Education, Interdisciplinary Research & Innovation, with a Focus on Sustainable and Inclusive Technology

MISSION

- 1. To deliver outcome based Quality education, emphasizing on experiential learning with the state of the art infrastructure.
- 2. To create a conducive environment for interdisciplinary research and innovation.
- 3. To develop professionals through holistic education focusing on individual growth, discipline, integrity, ethics and social sensitivity.
- 4. To nurture industry-institution collaboration leading to competency enhancement and entrepreneurship.
- 5. To focus on technologies that are sustainable and inclusive, benefiting all sections of the society.

QUALITY POLICY

Achieving Excellence in Technical Education, Research and Consulting through an Outcome Based Curriculum focusing on Continuous Improvement and Innovation by Benchmarking against the global Best Practices.

CORE VALUES

Professionalism, Commitment, Integrity, Team Work, Innovation

DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING

2018 SCHEME

Bachelor of Engineering (B.E.) Scheme and Syllabus of VII & VIII Semesters

(Autonomous Institution Affiliated to VTU, Belagavi) R.V. Vidyaniketan Post, Mysore Road

Bengaluru – 560 059

RV COLLEGE OF ENGINEERING[®]

Department Vision

Attain technical excellence in Electrical and Electronics Engineering through graduate programs and interdisciplinary research related to sustainability in power, energy and allied fields.

Department Mission

- To provide technical education that combines rigorous academic study and the excitement of innovation enabling the students to engage in lifelong learning
- To establish Centre of Excellence in sustainable electrical energy, smart grids and systems
- To establish tie-ups with industries and institutions of repute and to foster building up of a wide knowledge base to keep in tune with upcoming technologies.
- To motivate commitment of faculty and students to collate, generate, disseminate, persevere, knowledge and to work for the benefit of society.
- To develop simple, appropriate and cost effective inclusive technologies which are instrumental in the up-liftment of the rural society.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

PEO1: To provide a strong foundation in Mathematics, Science and Electrical & Electronics Engineering to comprehend, analyze, design, innovate and develop products for real world applications.

PEO2: To inculcate ethical attitude, effective communication skills, leadership qualities and team spirit for a successful professional career with concern for society.

PEO3: To provide a holistic academic environment to foster excellence, entrepreneurship and multidisciplinary approach to inculcate an aptitude for research and lifelong learning.

PROGRAM SPECIFIC OUTCOMES (PSOs)

| PSO | Description |
|------|---|
| PSO1 | The B.E. EEE Program must demonstrate knowledge and competence in the application of circuit analysis, control systems, field theory, analog and digital electronics, Power Electronics, microcontrollers, microprocessors, Signal processing and conditioning, computer hardware and software to the design, building, testing, protection and operation of electrical machines, power systems, electrical and electronic systems. |
| PSO2 | The B.E. EEE Program must demonstrate knowledge and competence in the application of basic sciences, rigorous mathematics and project management techniques in the design of complex electrical and electronic systems. |
| PSO3 | The B.E. EEE Program must demonstrate the ability to effectively work in a team, communicate correctly and develop an ethical attitude and concern for society and environment. |

6. Solution of swing curve with Modified Euler's method and Runge - Kutta method.

7. Study of Load frequency analysis of single area system and two area system.

| Cour | se Outcomes: After completing the course, the students will be able to |
|------|--|
| CO1 | Understand the fundamental concepts of power system networks and models of various |
| COI | components. |
| CO2 | Apply numerical techniques to evaluate the power flows and stability of power systems. |
| CO3 | Derive the load frequency control model and determine the control settings. |
| CO4 | Use MATLAB and commercial power system software packages for system studies |

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and Assignment/Presentation/Project (A). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for Assignment/Presentation/Project 10.

Total CIE is 30(Q) +50(T) +10(A) =100 Marks.

Laboratory- 50 Marks

The Laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average of marks over number of weeks is considered for 40 marks. At the end of the semester a test is conducted for 10 marks. Total marks for the laboratory is 50.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for each course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Laboratory- 50 Marks

Experiment Conduction with proper results is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

| | MINI PROJECT | | | | |
| Cou | Course Code: 16EE73P CIE Marks: 100 | | | | |
| Credits: L: T: P: S:: 0:0:3:0 SEE Marks: 100 | | SEE Marks: 100 | | | |
| Hrs/week: 06 | | | SEE Duration: 3 Hrs | | |
| Cou | Course Learning Objectives: The students will be able to | | | | |
| 1 | Create interest in innovative developments and preferably interdisciplinary field. | | | | |
| 2 | Work independently, analyze, evaluate and solve the given problem. | | | | |
| 3 | Inculcate the skills for good presentation and improve the technical report writing skills. | | | | |
| 4 | Recognize the need for planning, preparation, management and financial budgeting. | | | | |
| 5 | Acquire collaborative skills through working in a team to achieve common goals. | | | | |

Mini Project Guidelines:

- 1. Each project group will have two to four students, they can form their groups amongst their class.
- 2. Each group has to select a current topic that will use the technical knowledge of their program of study after intensive literature survey.
- 3. Guides will be allotted by the department based on the topic chosen.
- 4. The project should result in system/module which can be demonstrated, using the available resources in the college.
- 5. The CIE evaluation will be done by the committee constituted by the department. The committee shall consist of respective guide & two senior faculty members as examiners. The evaluation will be done for each student separately.
- 6. The final copy of the report should be submitted after incorporation of any modifications suggested by the evaluation committee

Guidelines for Evaluation:

CIE Assessment:

Evaluation will be carried out in three phases:

| Phase | Activity | Weightage |
|-------|--|-----------|
| Ι | Synopsis submission, approval of the selected topic, formulation of objectives | 20% |
| II | Mid-term evaluation to review the progress of work and documentation | 30% |
| III | Submission of report, Final presentation and demonstration | 50% |

The following are the weightages given for the various stages of the project:

- 1. Selection of the topic and formulation of objectives: 10%
- 2. Design and Development of Project methodology: 30%
- 3. Execution of Project: 30%
- 4. Presentation, Demonstration and Discussion: 20%
- 5. Report Writing:10%

SEE Assessment:

The following are the weightages given during SEE Examination:

- 1. Written presentation of synopsis:10%
- 2. Presentation/Demonstration of the project: 30%
- 3. Methodology and Discussion: 30%
- Technical Report: 10%
 Viva Voce: 20%

| Cour | Course Outcomes of Mini Project: | | | |
|------|--|--|--|--|
| 1 | Define Specifications, Conceptualize, Design and implement a project | | | |
| 2 | Communicate the work carried out as a technical report and orally | | | |
| 3 | Work in a team and contribute to team work | | | |
| 4 | Indulge in self-learning and be motivated for life-long learning | | | |

 Communication with different sensors: Proximity sensors :Inductive, capacitive sensors,
 Photoelectric Sensors and Switches, Encoders, Temperature sensors, position and displacement sensors, pressure sensors

Industrial Communication Protocols: RS232/RS485 Interface Standard, Modbus Protocol, Profit bus Protocol, Industrial Ethernet, ETHERCAT, Profinet Protocol.

UNIT-V09 HrsSCADA: Definition of SCADA, Elements of SCADA System, SCADA architecture,
Communication Access and Master-Slave architecture; determining scan interval; Introduction to
Remote Control and RTU, Long Distance Communication, Communication System components in
brief; - Protocols , Modems, Synchronous/Asynchronous telephone cable/radio, Half Duplex, Full
Duplex System, Brief introduction to RTU and MTU, Applications-Automatic Control, Advisory
Applications.

CIE is executed by way of quizzes (Q), tests (T) and Assignment/Presentation/Project (A). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for Assignment/Presentation/Project 10.

Total CIE is 30(Q) +50(T) +10(A) =100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marksis executed by means of an examination. The Question paper for each course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

| To give an insight into issues involved during installation and the coordination from | | | | | | | | |
| 5. | engineering fields during execution of the project. | | | | | | | |
| 4. | To know the Indian Electrical Standards related to wiring and substation design. | | | | | | | |

UNIT-I

UNIT-II

General Principles of Estimation:

Purpose of Estimating and costing, electrical schedule, catalogues, market survey, recording of estimates, determination of required quantity of material, labour conditions. Determination of cost of material and labour, contingencies, overhead charges, profit, purchase system, purchase enquiry and selection of appropriate purchase mode. Comparative statements Purchase order, payment of bills. Tender form.

Wiring System:

Introduction, distribution board, methods of wiring,

Insulating materials, types of cables used in internal wiring, multistring cable.

Conduit accessories and fittings.

Residential building electrification:

Circuits and sub circuits, types of lighting circuits. General rules guidelines for wiring of residential installation and positioning of equipment's. Determination of total load, procedure of designing the circuits and deciding the sub circuits. Determination of size of conductor, single line diagram. Sequence to be followed to prepare estimate, preparation of detailed estimates and costing of residential instillation.

Inspection and testing of installations:

Inspection of internal wiring, of new installation. Testing of wiring installation. Reason for excess recording of energy consumption by energy meter

General idea about IE rules, major applicable IE rules.

UNIT-III

09 Hrs

09 Hrs

12 Hrs

Electrification of commercial installation:

Difference between electrification of residential and commercial installation. Fundamental considerations for planning o an electrical installation system for commercial building. Design considerations of electrical installation system for commercial building. Load calculation and selection of service connection and nature of supply. Deciding the size of the cables, bus bar and bus bar chambers, mounting arrangements and positioning of switch boards, distribution boards main switch etc. Earthing of the electrical installation, wiring system and layout. Sequence to be followed to prepare estimate. Preparation of detailed estimate and costing of commercial installation.

Electrical wiring and installation for power circuits:

Motor installation. Determination of input power, input current to motors. Determination of cables. Determination of rating of fuse. Determination of size of conduit, distribution board, main switch and starter. Estimation of power circuits.

| UNIT-IV | | | | | |
|---|----------|--|--|--|--|
| Design and Estimation of overhead transmission and distribution: | | | | | |
| Introduction, typical AC electrical power system main components of overhead lines, line sup | oports. | | | | |
| Factors governing height of pole, conductor material, determination of size of conductor, cross arms, | | | | | |
| ole brackets and clamps, guys and stays. Conductors configuration, spacing and clearances, span | | | | | |
| lengths, overhead line insulators, insulator materials, types of insulators. Lightning arresters, | phase | | | | |
| plates, danger plates, ant climbing devices bird guards etc. Erection of supports, fixing of cross | ss arms, | | | | |
| insulators, conductor erection. Dear end clamps. Earthing of transmission lines. Guarding of c | overhead | | | | |
| lines | | | | | |

| | UNIT-V | | |
|---------------------------------------|---------|-------|---|
| Design and estimation of substations: | | | |
| | • • • • | 1 | 1 |

Introduction, classification of substations, indoor substations, outdoor substations, selection and location of site for substation. Main electrical connections, graphical symbols for various types of apparatus and circuit elements, key diagrams of typical substations. Equipment for substations and switchgear installations, axillaries supply. Substation earthing. Concept of Internal Rate of **Return(IRR)**

| Cours | Course Outcomes: After completing the course, the students will be able to | | | | |
|-------|--|--|--|--|--|
| CO1: | Understand the procedure involved in estimating, costing and tender. | | | | |
| CO2: | Apply the technical knowledge in estimating the quantity of materials required for domesting and industrial electrification process. | | | | |
| CO3: | Design the circuits and sub circuits required for electrifying the commercial and power installation. | | | | |
| CO4: | Design and estimate the transmission lines and substation. | | | | |

| | POWER SYSTEM OPERATION AND CONTROL | | | | | | |
| | | (Group G: Professional Elective | e) | | | | |
| Cou | rse Code: 16EE7G4 | | CIE Marks: 100 | | | | |
| Crec | lits: L:T:P:S 4 :0:0:0 | | SEE Marks: 100 | | | | |
| Hou | rs: 48L | | SEE Duration: 3Hrs | | | | |
| Cou | Course Learning Objectives: The students will be able to | | | | | | |
| 1 | Learn the fundamental principles of operation and control of the power system for reliable | | | | | | |
| 1. | operation. | operation. | | | | | |
| 2. | Study the components of | SCADA and challenges in applying | g it to power systems. | | | | |
| 2 | Study , understand and compare the different algorithms for unit commitment and hydro- | | | | | | |
| 3. thermal scheduling | | | | | | | |
| 4 | Study the effect of tie-lin | ne control and frequency bias factor | ors on AGC and develop the state | | | | |
| 4. | space model for frequency | y analysis. | | | | | |
| 5. | Perform a complete contingency analysis and rank the contingencies | | | | | | |

| UNIT-I | 09 Hrs | | | |
|---|-----------|--|--|--|
| Introduction and SCADA in modern power systems : Operating states of the power | r system, | | | |
| objectives of control, key concepts of reliable operation, reliable operation, preven | tive and | | | |
| emergency controls, modern energy management centres, SCADA and its components, SCA | DA users | | | |
| in power systems, RTUs for power system SCADA, communication channels, chall | enges of | | | |
| application of SCADA | | | | |
| UNIT-II | 09 Hrs | | | |
| Unit Commitment and hydro-thermal scheduling.: Problem of unit commitment, constraints, | | | | |
| enumeration and priority list method, Dynamic programming, Scheduling of hydro-thermal systems | | | | |
| , discrete time interval method, scheduling from energy available, short-term scheduling using γ - λ | | | | |
| method, scheduling using penalty factors | | | | |
| UNIT-III | 10 Hrs | | | |
| Automatic Generation Control : Fundamentals of AGC, mathematical model of ALFC, AG | С | | | |

Automatic Generation Control : Fundamentals of AGC, mathematical model of ALFC, AGC controller, AGC with integral controller, tie-line control, frequency bias-factors, state-space model, implementation of AGC

UNIT-IV10 HrsVoltage And Reactive Power Control: Reactive power, voltage control methods, cost saving,
voltage control by reactive power injection, voltage control using transformers, voltage stability,
voltage strength and voltage collapse.

UNIT-V10 HrsPower System Security And Contingency Analysis :Functions of security, contingency analysis and
factors affecting it, Dc load flow, Generation shift sensitivity factors and line-outage sensitivity
factors, contingency ranking, performance indices, 1P1Q method for selection,10 Hrs

| Course | Course Outcomes: After completing the course, the students will be able to | | | | | | | |
|-------------|--|--|--|--|--|--|--|--|
| CO1: | Have a thorough knowledge of the different operating states and the respective control actions | | | | | | | |
| | available in each of them and the SCADA systems in use. | | | | | | | |
| CO2: | Analyze the techniques used in the power industry for control of frequency and voltage. | | | | | | | |
| CO3: | Provide solution for major operational and control issues during steady state and under | | | | | | | |
| | contingencies. | | | | | | | |

| CO ² | I: Design control strategies under different operating conditions |

CIE is executed by way of quizzes (Q), tests (T) and Assignment/Presentation/Project (A). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50. The marks component for Assignment/Presentation/Project 10.

Total CIE is 30(Q) +50(T) +10(A) =100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marksis executed by means of an examination. The Question paper for each course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

| 5 | To have awareness about the nanoscale products used in multidisciplinary fields. | | | | | | |
| | | | | | | | |
| Unit-I 06 Hrs | | | | | | | |
| Intro | Introduction to Nanomaterials: History of Nanotechnology, structures and properties of carbon | | | | | | |
| based: Fullerenes (Bucky Ball, Nanotubes), metal based: Nano Shells, Quantum Dots, Dendrimers, | | | | | | | |
| Dian | Diamond like carbon(DLC) Nanocarriers, bionanomaterails: protein & DNA based nanostructures, | | | | | | |
| Hybr | Hybrids: hybrid biological/inorganic, Nanosafety Issues: Toxicology health effects caused by | | | | | | |
| nano | nanoparticles. | | | | | | |
| | | | | | | | 00 77 |

 Unit – II
 08 Hrs

 Characterization of Nanostructures: Spectroscopy: UV-Visible spectroscopy, Fourier Transform infrared spectroscopy (FTIR), Raman Spectroscopy, X-ray spectroscopy. Electron microscopy: Scanning electron microscopy (SEM), Transmission electron microscopy (TEM).Scanning probe microscopy: Atomic Force microscopy (AFM), Scanning tunnel microscopy (STM).

Nano Synthesis and Fabrication: Introduction & overview of Nanofabrication: Bottom up and Top down approaches using processes like Ball milling, Sol-gel Process, Chemical Vapour deposition (CVD), plsma arching and various lithography techniques (Hard & Soft lithography).

Unit –III09 HrsNanosensors: Overview of nanosensors, prospects and market. Types of Nanosensors and their
applications. Electromagnetic nanosensors: Electronic nose and electronic tongue, Magnetic
nanosensors. Mechanical nanosensors: Cantilever Nanosensors, Mechanics of CNTs, Biosensors:
Biosensors in modern medicine.

Unit –IV

Micro & Nano-Electromechanical systems and Microfluidics: MEMS/NEMS: Magnetic, Chemical and Mechanical Transducers –Sensing and Actuators. Microfludics: Laminar flow, Hagen-Peouiselle equation, basic fluid ideas, Special considerations of flow in small channels, mixing, microvalves & micropumps.

Unit -V07 HrsApplications of Nanotechnology:Molecular electronics, molecular switches, mechanical cutting
tools, machine components, DLC coated grinding wheels. solar cells, Batteries, fuel cells, Nanofilters.
Medical nanotechnology: in Diagnostics, Therapeutics, Drug delivery and Nanosurgery.

06 Hrs

Knowledge Inference

Knowledge representation -Production based system, Frame based system. Inference - Backward chaining, Forward chaining, Rule value approach, Fuzzy reasoning - Certainty factors, Bayes Rule, Uncertainty Principles, Bayesian Theory-Bayesian Network-Dempster - Shafer theory.

Unit –III

| Unit –IV | 07 Hrs |
|--|-----------|
| Learning from Observations: A General Model of Learning Agents, Inductive Learning, | Learning |
| Decision Trees, Using Information Theory, Learning General Logical Descriptions, Why | Learning |
| Works: Computational Learning Theory | |
| Reinforcement Learning: Passive Learning in a Known Environment, Passive Learni | ng in an |
| Unknown Environment, Active Learning in an Unknown Environment | |
| | |
| Unit –V | 07 Hrs |
| Expert Systems, Components, Production rules, Statistical reasoning, certainty factors,m | easure of |
| belief and disbelief, Meta level knowledge, Introspection. Expert systems - Architecture | of expert |
| systems, Roles of expert systems - Knowledge Acquisition -Meta knowledge, Heuristics | . Typical |
| expert systems - MYCIN, DART, XOON, Expert systems shells. | |

| Course Outcomes: After completing the course, the students will be able to | | | | | | | |
|--|--|--|--|--|--|--|--|
| CO1: | Understand and explore the basic concepts and challenges of Artificial Intelligence. | | | | | | |
| CO2: | Analyze and explain basic intelligent system algorithms to solve problems. | | | | | | |
| CO3: | Apply Artificial Intelligence and various logic-based techniques in real world problems. | | | | | | |
| CO4: | Assess their applicability by comparing different Intelligent System techniques | | | | | | |

CIE is executed by way of quizzes (Q), tests (T) and Assignment/Presentation/Project (A). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 60 marks each and the sum of the marks scored from three tests is reduced to 60. The marks component for Assignment/Presentation/Project 10.

Total CIE is 30(Q) +60(T) +10(A) =100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

CIE is executed by way of quizzes (Q), tests (T) and Assignment/Presentation/Project (A). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 60. The marks component for Assignment/Presentation/Project 10.

Total CIE is 30(Q) +60(T) +10(A) =100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and Assignment/Presentation/Project (A). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 60 marks each and the sum of the marks scored from three tests is reduced to 60. The marks component for Assignment/Presentation/Project 10.

Total CIE is 30(Q) +60(T) +10(A) =100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and Assignment/Presentation/Project (A). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 60 marks each and the sum of the marks scored from three tests is reduced to 60. The marks component for Assignment/Presentation/Project 10. Total CIE is 30(Q) + 60(T) + 10(A) = 100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

Optical fibre materials

UNIT-III

<u>08 H</u>rs

Fiber Optics, Advantages of optical fiber communication over analog communication, Classification based on refractive index of the core- step index and graded index optical fibres, Classification based on core radius-single mode and multimode optical fibres, Fibre fabrication.-Methods to manufacture optical glass fibres. Double crucible method and preform methods. Manufacture of perform- Chemical Vapour Deposition (CVD), Modified vapour deposition (MCVD) Plasma activated vapour deposition (PCVD), Outside vapour deposition (OVD)-Vapour-phase axial deposition (VAD). Drawing the fibres from perform, coating and jacketing process.

Ion exchange resins and membranes

Ion exchange resins-Introduction, Types, physical properties, chemical properties-capacity, swelling, kinetics, stability, ion exchange equilibrium, regeneration. Applications of ion exchange resins-softening of water, demineralization of water, advantages and disadvantages of ion exchange resins-calcium sulphate fouling, iron fouling, adsorption of organic matter, bacterial contamination. Ion exchange membranes, Types, Classification, Fabrication of ion exchange cottons- anion exchange cotton and cation exchange

| cotton. Application of ion exchange membranes in purification of water by electro dialysis met | hod. |
|--|---------------|
| UNIT-IV | 08 Hrs |
| Spectroscopic Characterization of materials: | |
| Electromagnetic radiation, interaction of materials with electromagnetic radiation. | |
| UV- visible spectrophotometry :Introduction-Electronic transitions- factors influencing p | position and |
| intensity of absorption bands-absorption spectra of dienes, polyene and α , β -unsaturate | ed carbonyl |
| compounds, Working of UV-Vis spectrophotometer, Theoretical calculation of λ_{max} by using | Woodward- |
| Fieser rules- for cyclic and α , β -unsaturated carbonyl compounds. | |
| IR Spectroscopy: Introduction, principle, molecular vibrations, vibrational frequency, | number of |
| fundamental vibrations, factors influencing fundamental vibrations, instrumentation | on of IR |
| spectrophotometer, sampling techniques and application of IR spectroscopy in charact | erization of |
| functional groups. | |
| UNIT-V | 08 Hrs |
| NMR spectroscopy: | |
| H ¹ NMR Spectroscopy: Basic concepts- relaxation process. NMR spectrometer-FT NMR-Solv | vents used in |
| NMR, internal standards-Chemical equivalence -Integrals and Integrations- chemical standards- | shift-Factors |
| affecting chemical shifts- shielding and deshielding effects - chemical and magnetic equivaler | nt –magnetic |

affecting chemical shifts- shielding and deshielding effects – chemical and magnetic equivalent –magnetic anisotropy-spin-spin splitting rules- Application of NMR on various compounds such as alkanes, alkenes, alkynes, alkyl halides, alcohols, ethers, amines, aldehydes, ketones, carboxylic acids, esters, amides & mono substituted aromatic compounds. Problems on prediction of structure of compounds.

| Cou | rse Outcomes: After completing the course, the students will be able to |
|-------------|---|
| CO 1 | Identify sustainable engineering materials and understand their properties. |
| CO2 | Apply the basic concepts of chemistry to develop futuristic materials for high-tech applications in |
| | different areas of engineering. |
| CO3 | Analyze and evaluate the specific application of materials. |
| CO4 | Design the route for synthesis of material and its characterization. |

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and Assignment/Presentation/Project (A). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 60. The marks component for Assignment/Presentation/Project 10. Total CIE is 30(Q) + 60(T) + 10(A) = 100 Marks.

| Cou | rse Learning Objectives: The students will be able to |
|-----|---|
| 1 | Get an overview of the history of UAV systems |
| 2 | Understand the importance of aerodynamics, propulsion, structures and avionics in the design of UAV |
| 3 | Demonstrate ability to address the various mission payloads - on-board & off-board, propulsion systems, integration with manned systems |
| 4 | Assess the performance and airworthiness of the designed UAV |

| Unit-I | 06 Hrs | | | |
|--|------------|--|--|--|
| Introduction to Flight Vehicles: | | | | |
| History of Flight Vehicles and UAVs, Classifications, Woking principles of flight vehicle. | | | | |
| Introduction to Unmanned Aircraft Systems | | | | |
| Types of UAVs, configurations and their advantages disadvantages, System Composition, Appli | cations of | | | |
| UAVs, Characteristics of Aircraft | | | | |
| Unit – II | 07 Hrs | | | |
| Design of UAV Systems: Governing aspects: | | | | |
| a. Aerodynamics, b. Propulsion, C. structure, d. Controls | | | | |
| Aerodynamics: | | | | |
| Introduction basic Aerodynamics, lift, drag, Aerofoils, wing area optimization. | | | | |
| Propulsion: | | | | |
| Introduction to propulsion system in UAV, Propulsion system for fixed wing UAV and VTOL | (Vertical | | | |
| take-off and landing) UAV, Advanced propulsion systems, fuel cells, generators based systems. | | | | |
| Unit -III | 07Hrs | | | |
| Structures of UAV: | | | | |
| Mechanic loading, basics of types of load calculation and structural engineering, Material used | for UAV | | | |
| (general introduction), FRP and methods of usage in UAV, Testing of FRP specimens for UAV, | selection | | | |
| criteria for structure, Types of structural elements used in UAV their significance and characteristics, | | | | |
| Methods of manufacturing UAV structure. | | | | |
| Unit -IV | 07 Hrs | | | |
| Controls, Avionics, Hardware, Communication, Payloads: | | | | |
| Basics of control system and Systems for control system in UAV, PID control, simulation introd | duction to | | | |
| Hardware in loop system (HILS), Avionics: Autopilot (AP) - architecture of AP, sensors, actuated | ors, power | | | |
| supply, integration, installation, configuration, and testing. | | | | |
| Hardware, Communication | | | | |
| Electronics Hardware in UAV, Communication methods, communication antenna and their signifi | cance. | | | |
| Payloads: | | | | |
| Payload types and their applications | | | | |
| Unit -V | 09 Hrs | | | |
| Design of UAV Systems: | | | | |
| Fixed wing UAV and Rotary wing UAV (VTOL) | | | | |
| Task specific, activity based exercise | | | | |
| | | | | |

| Cours | Course Outcomes: At the end of this course the student will be able to : | | | |
|------------|--|--|--|--|
| CO1 | Appraise the evolution of UAVs and understand the current potential benefits of UAVs | | | |
| CO2 | Apply the principles of Aerospace Engineering in design and development of UAVs | | | |
| CO3 | Determine and evaluate the performance of UAV designed for various Missions and applications | | | |
| CO4 | Assess the performance and airworthiness of the designed UAV | | | |

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and Assignment/Presentation/Project (A). A minimum of three quizzes are conducted and each quiz is evaluated for 10 marks adding up to 30 marks. All quizzes are conducted online. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three also. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 60. The marks component for Assignment/Presentation/Project 10.

Total CIE is 30(Q) +60(T) +10(A) =100 Marks.

Semester End Evaluation (SEE); Theory (100 Marks)

SEE for 100 marks is executed by means of an examination. The Question paper for the course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the complete syllabus. Part – B consists of five main questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have sub questions. The question from Units I, IV and V have no internal choice. Units II and III have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

|---------------|--|--------------------------------|-------------------------|--|
| | MAJOR PROJECT | | | |
| Cour | Course Code: 16EE81 CIE Marks: 100 | | | |
| Cred | Credits: L: T: P: S:: 0:0:16:0 SEE Marks: 100 | | | |
| Hrs/ | Hrs/week: 32 SEE Duration: 3 Hrs | | | |
| Cour | Course Learning Objectives: The students will be able to | | | |
| 1 | Acquire the ability to make links across different areas of knowledge and to generate, develop and | | | |
| | evaluate ideas and information so as to apply these skills to the project task. | | | |
| 2 | Acquire the skills to communicate effectively and to present ideas clearly and coherently to a | | | |
| | specific audience in both written and oral forms. | | | |
| 3 | Acquire collaborative skills through working in a team to achieve common goals. | | | |
| 4 | Self-learn, reflect on their learning and take appropriate action to improve it. | | | |
| 5 | Prepare schedules and budge | ets and keep track of the pro- | ogress and expenditure. | |

Major Project Guidelines:

- 1. The project topic, title and synopsis have to be finalized and submitted to their respective internal guide(s) before the beginning of the 8th semester.
- 2. The detailed Synopsis (approved by the department *Project Review Committee*) has to be submitted during the 1st week after the commencement of 8th semester.

Batch Formation:

- Students are free to choose their project partners from within the programme or any other programme.
- Each student in the team must contribute towards the successful completion of the project. The project may be carried out In-house / Industry / R & D Institution.
- The project work is to be carried out by a team of two to four students, in exceptional cases where a student is placed in a company and offered an internship through the competitive process or student is selected for internship at national or international level through competitive process, the student can work independently.
- The students are allowed to do either a project for full 5 days in the industry or full 5 days in the college.
- In case the project work is carried out outside Bengaluru, such students must be available during Project Evaluation process scheduled by the respective departments and they must also interact with their guide regularly through Email / Webinar / Skype etc.

Project Topic Selection:

The topics of the project work must be in the *field of respective program areas or in line with CoE's(Centre of Excellence) identified by the college* or List of project areas as given by industry/Faculty. The projects as far as possible should have societal relevance with focus on sustainability.

Project Evaluation:

- Continuous monitoring of project work will be carried out and cumulative evaluation will be done.
- The students are required to meet their internal guides once in a week to report their progress in project work.
- Weekly Activity Report (WAR) has to be maintained in the form of a diary by the project batch and the same has to be discussed with the Internal Guide regularly.
- In case of *Industry project*, during the course of project work, the internal guides will have continuous interaction with external guides and will visit the industry at least twice during the project period.

- For CIE assessment the project groups must give a final seminar with the draft copy of the project report.
- The presentation by each group will be for 20-30 minutes and every member of the team needs to justify the contributions to the project.
- > The project team is required to submit Hard copies of the detailed Project Report in the prescribed format to the department.
- ➢ For CIE 50% weightage should be given to the project guide and 50% weightage to the project evaluation committee.
- Before the final evaluations the project group is required to produce a No dues certificate from Industry, Central Library and Department.

Course Outcomes of Major Project:

| 1 | Apply knowledge of mathematics, science and engineering to solve respective engineering domain |
|---|--|
| | problems. |
| 2 | Design, develop, present and document innovative/multidisciplinary modules for a complete |
| | engineering system. |
| 3 | Use modern engineering tools, software and equipment to solve problem and engage in life-long |
| | learning to follow technological developments. |
| 4 | Function effectively as an individual, or leader in diverse teams, with the understanding of |
| | professional ethics and responsibilities. |

CIE Assessment:

The following are the weightings given for the various stages of the project.

| 1. | Selection of the topic and formulation of objectives | 10% |
|----|--|-----|
| 2. | Design and Development of Project methodology | 25% |
| 3. | Execution of Project | 25% |
| 4. | Presentation, Demonstration and Results Discussion | 30% |
| 5. | Report Writing & Publication | 10% |

SEE Assessment:

The following are the weightages given during Viva Examination.

| 1. | Written presentation of synopsis | 10% |
|----|---|-----|
| 2. | Presentation/Demonstration of the project | 30% |
| 3. | Methodology and Experimental Results & Discussion | 30% |
| 4. | Report | 10% |
| 5. | Viva Voce | 20% |

| VIII Semester | | | | | |
|---------------|--|--|--|--|--|
| | TECHNICAL SEMINAR | | | | |
| Cour | Course Code: 16EE82 CIE Marks: 50 | | | | |
| Cred | Credits: L: T: P: S:: 0:0:2:0 SEE Marks: 00 | | | | |
| Hrs/ | Hrs/week: 4 SEE Duration: NA | | | | |
| Cour | Course Learning Objectives: The students will be able to | | | | |
| 1 | Recognize recent developments in specific program and in multidisciplinary fields. | | | | |
| 2 | Summarize the recent technologies and inculcate the skills for literature survey. | | | | |
| 3 | Demonstrate good presentation skills. | | | | |
| 4 | Plan and improve the Technical Report writing skills. | | | | |
| 5 | Support Group discussion and Team work. | | | | |

General Guidelines for the Seminar

- 1. The seminar has to be presented by individual student.
- 2. The topic of the seminar should be from current thrust area along with consultation with the guide.
- 3. The topic can be based on standard papers (like IEEE/ACM/CSI etc.) in the thrust area for the selected topic.
- 4. Presenting/publishing this paper in conference/ Journal will be given weightage in CIE.
- 5. The student needs to submit both hard & soft copy of the seminar report.
- 6. As Outcome of Technical Seminar, each student has to prepare a technical paper out of seminar topic.

Course Outcomes of Technical Seminar:

| 1 | Communicate effectively on complex engineering problems and demonstrate contextual knowledge | | | |
|---|--|--|--|--|
| | to assess societal and environmental contexts. | | | |
| 2 | Identify, formulate, review research literature, analyze and Design solutions for complex | | | |
| | engineering problems using appropriate techniques with effective documentation. | | | |
| 3 | Analyze, interpret and synthesize the information to provide valid conclusions with innovative | | | |
| | ideas and ethical principles. | | | |
| 4 | Apply the knowledge of engineering specialization to suggest solutions to complex engineering | | | |
| | problems and recognize the need for technological changes. | | | |

Evaluation of CIE Marks:

| 1. | Relevance of the topic | 10% |
|----|------------------------|-----|
| 2. | Literature Survey | 10% |
| 3. | Presentation | 40% |
| 4. | Report | 20% |
| 5. | Paper Publication | 20% |

| VIII Semester | | | | | |

| Cour | se Learning Objectives: The students will b | e able to | | | |
| 1 | To provide a platform for the students to exhibit their organizational capabilities, team building, | | | | |
| | ethical values and extra mural abilities. | | | | |
| 2 | To encourage to carryout innovative ideas and projects. | | | | |
| 3 | Take part in societal and community building activities. | | | | |
| 4 | Make self-learning, ethics and lifelong learning a motto. | | | | |

Guidelines

- 1. The HSS will be evaluated individually based on the broad parameters which include the progress made by student during 3rd& 4th year in innovative projects, Seminar, Paper Presentation, Field activity & other Co-curricular activities.
- 2. Students shall submit a report and documents as a proof his/her achievements.

| Course Outcomes of Innovation & Social Skills: | | |
|--|--|--|
| 1 | Apply the knowledge and skills for solving societal issues | |
| 2 | Plan to work in team in various areas with inclusive effort and sustainability | |
| 3 | Organize various events and use managerial and budgeting abilities | |
| 4 | Demonstrate leadership qualities and ethics | |

| VIII Semester | | | | |
|--|---|---|--|--|
| INDUSTRIAL TOUR | | | | |
| Course Code: 16EE84 | | CIE Marks: NA | | |
| Credits: L: T: P: S:: 0:0:1:0 | | SEE Marks: NA | | |
| Hrs/week: 2 | | SEE Duration: NA | | |
| Course Learning Objectives: The students will be able to | | | | |
| 1 | To provide a platform for th | e students to understand different generating, and distribution power | | |
| | stations. | | | |
| 2 | To identify the different functional parts of power stations. | | | |
| 3 | To understand and analyse th | e working concept of power generators. | | |
| 4 | To understand the interconne | ction different power generating stations. | | |

After the completion of 7th semester exam and before commencement of 8th semester, the students of the class have to visit nuclear, hydel, thermal, Solar, wind and diesel power plants. This tour is of 4-5 days duration. Students have to submit report.

| Course Outcomes of Industrial Tour: | | | |
|-------------------------------------|---|--|--|
| 1 | Analyse economics of power plants and list factors affecting the power plants and interpret the | | |
| | performance of various power plants based on load variations | | |
| 2 | Identify elements and their functions and operations of various power plants. | | |
| 3 | Acquire knowledge and analyse the working concept of various power generators /power plants. | | |
| 4 | Analyse interconnection different power generating stations | | |
Curriculum Design Process

Academic Planning and Implementation

PROCESS FOR COURSE OUTCOME ATTAINMENT

R.V.College of Engineering[®] – *Bengaluru* - 59

Program Outcome Attainment Process

PROGRAM OUTCOMES (PO)

PO1: **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2: **Problem analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3: **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4: Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5:**Modern tool usage** : Create, select, and apply appropriate techniques, resources, and modern Engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO6: **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7: Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8: Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9: **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10:**Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11: **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12: Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
