INFORMATION TECHNOLOGY

DEPARTMENT OF

INFORMATION SCIENCE & ENGINEERING

Department Vision & Mission

Vision:

To be the hub for innovation in Information Science & Engineering through Teaching, Research, Development and Consultancy; thus make the department a global resource center in advanced, sustainable and inclusive technology.

Mission:

1. To enable students to become responsible professionals, strong in fundamentals of information science and engineering through experiential learning
2. To bring research and entrepreneurship into class rooms by continuous design of innovative solutions through research publications and dynamic development oriented curriculum.
3. To facilitate continuous interaction with the outside world through student internship, faculty consultancy, workshops, faculty development program, industry collaboration and association with the professional societies.
4. To create a new generation of entrepreneurial problem solvers for a sustainable future through green technology with an emphasis on ethical practices, inclusive societal concerns and environment
5. To promote team work through inter-disciplinary projects, co-curricular and social activities.

PROGRAM OUTCOMES

M. Tech. in Information Technology Students will be able to:

PO1: An ability to **independently carry out research /investigation** and development work to solve practical problems.

PO2: An ability to **write and present** a substantial technical report/document.

PO3: Acquire **in-depth knowledge** of information technology with global perspective, analyze & synthesize with existing and new knowledge to enhance the skills.

PO4: Apply appropriate techniques to use **modern engineering & IT tools** by analyzing its limitations.

PO5: Recognise opportunities and contribute positively to **collaborative-multidisciplinary** scientific research in Information Technology, demonstrate a capacity for self-management and teamwork.

PO6: Demonstrate knowledge and understanding of Information Technology principles & apply the same to one's own work, as a member and leader in a team, **manage projects** efficiently.

Semester : I				
PROBABILITY THEORY AND LINEAR ALGEBRA (Common to MCN, MCS, MDC, MCE, MRM, MIT, MSE)				
Course Code: 18MAT11B		**CIE Marks**	**:**	**100**
Credits: L:T:P :4: 0:0		**SEE Marks**	**:**	**100**
Hours : 47		**SEE Duration**	**:**	**3 Hrs**

Course Learning Objectives (CLO):

The students will be able to:

1. Understand the basics of Probability theory and Linear Algebra.
2. Develop probability models for solving real world problems in engineering applications.
3. Apply standard probability distributions to fit practical situations.Compute the characteristic polynomial, Eigen values and Eigen vectors and use them in applications.
4. Diagonalize and orthogonally diagonalize symmetric matrices.

Unit – I	**9 Hrs**

Matrices and Vector spaces :

Geometry of system of linear equations, vector spaces and subspaces, linear independence, basis and dimension, four fundamental subspaces, Rank-Nullity theorem(without proof), linear transformations.

Unit – II	**9 Hrs**

Orthogonality and Projections of vectors:

Orthogonal Vectors and subspaces, projections and least squares, orthogonal bases and Gram- Schmidt orthogonalization, Computation of Eigen values and Eigen vectors, diagonalization of a matrix, Singular Value Decomposition.

Unit – III	**10 Hrs**

Random Variables:

Definition of random variables, continuous and discrete random variables, Cumulative distribution Function, probability density and mass functions, properties, Expectation, Moments, Central moments, Characteristic functions.

Unit – IV	**10 Hrs**

Discrete and Continuous Distributions:

Binomial, Poisson, Exponential, Gaussian distributions.

Multiple Random variables:

Joint PMFs and PDFs, Marginal density function, Statistical Independence, Correlation and Covariance functions, Transformation of random variables, Central limit theorem (statement only).

Unit – V	**9 Hrs**

Random Processes:

Introduction, Classification of Random Processes, Stationary and Independence, Auto correlation function and properties, Cross correlation, Cross covariance functions. Markov processes, Calculating transition and state probability in Markov chain.

Expected Course Outcomes:

After completion of the course, the students should have acquired the ability to:

CO1: Demonstrate the understanding of fundamentals of matrix theory, probability theory and random process.

CO2: Analyze and solve problems on matrix analysis, probability distributions and joint distributions.

CO3: Apply the properties of auto correlation function, rank, diagonalization of matrix, verify Rank - Nullity theorem and moments.

CO4: Estimate Orthogonality of vector spaces, Cumulative distribution function and characteristic function. Recognize problems which involve these concepts in Engineering applications.

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks):
CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) Solving innovative problems 2) Seminar/new developments in the related course 3) Laboratory/ field work 4) mini project.
Total CIE is 20+50+30 = 100 marks.

Scheme of Semester End Examination (SEE) for 100 marks:
The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Advanced Data Structures and Algorithms (Theory and Practice)		
Course Code:18MSE12		**CIE Marks: 100 + 50**
Credits: L:T:P:4:0:1		**SEE Marks: 100 + 50**
Hours: 45L		**SEE Duration: 3Hrs**

Course Learning Objectives:	
	Graduates shall be able to:
1	Understand the implementation, complexity analysis and applications of advanced data structures.
2	Analyze various algorithms for efficiency.
3	Develop mathematical skills for algorithm design, analysis, and evaluation
4	Design and implement efficient solutions to various real world problems through algorithms.

Unit-I	**09 Hrs**
Analysis Techniques: Growth of Functions: Asymptotic notations, Recurrences relations and solutions Amortized Analysis: Aggregate, Accounting and Potential Methods. **Advanced Data structures**: Abstract data types (ADTs), Graph, Directed Acyclic Graph, Trees: Preliminaries, Binary tree, The search tree ADT: Binary search tree, 2-3-4 tree, Red Black tree.	
Unit – II	**09 Hrs**
Priority Queues and Disjoint Sets, **Heaps**: Binary, Binomial, Fibonacci, leftist, Skew. **Graph Algorithms**: Bellman - Ford Algorithm, Single source shortest paths in a DAG, Dijkstra's algorithm, Johnson's Algorithm for sparse graphs, Flow networks and Ford- Fulkerson method, Maximum bipartite matching.	
Unit -III	**09 Hrs**
Tries: Ctrie, Radix, Suffix, Ternary search. **String-Matching Algorithms**: Naïve string Matching, Rabin - Karp algorithm, String matching with finite automata **Algorithm Design Techniques:** Dynamic Programming: Matrix-Chain Multiplication, Elements of Dynamic Programming, Longest Common Subsequence.	
Unit –IV	**09 Hrs**
Spatial data partitioning tree: K-d tree, segment tree, Range tree, Interval tree, Priority search tree. **Computational Geometry**: Line segment properties, determining whether any pair of segments intersects, Finding the convex hull, finding the closet pair of points.	
Unit –V	**09 Hrs**
Probabilistic and Randomized Algorithms: Probabilistic algorithms, Randomizing deterministic algorithms, Monte Carlo and Las Vegas algorithms, Probabilistic numeric algorithms.	

Laboratory Component:

The following programs will be executed on Java/C/C++/C# any equivalent tool/language by adapting exception handling technique wherever it is suitable.

1. Write a program to implement a dictionary using Binary Search Tree(BST) ADTs. Assume all the entries in the dictionary to be distinct integers. Each ADT should support five operations, void Insert (val),boolean Delete(val),boolean Search(val),void ClearADT() and void DisplayADT(). Both search and delete operations should respond with a boolean value indicating whether the search/delete was successful or not.
2. Design, develop, and write a program to implement insertion and search operation in a 2-3-4 tree. Determine its complexity.
3. Design, develop, and write a program to implement the Dijkstra's algorithm using Binary heap. Determine its complexity
4. Design, develop, and write a program to implement a spell checker using any Trie variant. Determine its complexity.
5. Design, develop, and write a program to implement segment tree and determine its complexity.
6. Design, develop, and write a program to implement Jhonson algorithm and determine its complexity
7. Design, develop, and write a program to implement to solve string matching problem using naive approach and the Rabin Karp algorithm and compare their complexity.
8. Design, develop, and write a program to implement to solve matrix chain multiplication problem.
9. Design, develop, and write a program to implement a Monte Carlo-Rabin Miller algorithm to test the primality of a given integer.
10. Design, develop, and write a program to implement Graham's Scan algorithm to solve convex-hull problem.

Course Outcomes: After going through this course, the students will be able to	
CO1:	Apply data structure techniques for various programming aspects.
CO2:	Evaluate advanced data structures and algorithms with an emphasis on persistence.
CO3:	Analyze data structure impact on algorithms, program design and program performance.
CO4:	Design and implement efficient solutions to real world problems.

Continuous Internal Evaluation (CIE): Total marks: 100+50=150

Continuous Internal Evaluation (CIE); Theory (100 Marks)
CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks.. A minimum of two assignments are given with a combination of two components among 1) solving innovative problems 2) seminar/new developments in the related course 3) Laboratory/field work 4) mini project. The marks component for each assignment is 15 marks. **Total CIE is 20+50+30=100 Marks.**

Continuous Internal Evaluation (CIE); Practical (50 Marks)
The Laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average of marks over number of weeks is considered for 30 marks. At the end of the semester a test is conducted for 10 marks. The students are encouraged to implement additional innovative experiments in the lab and are rewarded for 10 marks. Total marks for the laboratory is 50.

Semester End Evaluation (SEE): Total marks: 100+50=150
Theory (100 Marks) + Practical (50 Marks) = Total Marks (150)

Scheme of Semester End Examination (SEE) for 100 marks:
The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Scheme of Semester End Examination (SEE); Practical (50 Marks)
SEE for the practical courses will be based on experiment conduction with proper results, is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

Semester: I		
Advanced Data Engineering (Theory & Practice)		
Course Code: 18MIT13		**CIE Marks: 150**
Credits: L:T:P: 4:0:1		**SEE Marks: 150**
Hours: 43L		**SEE Duration: 3Hrs**

Course Learning Objectives:	
1	Define parallel and distributed databases and its applications.
2	Show applications of Object Oriented database
3	Explain basic concepts, principles of intelligent databases.
4	Utilize the advanced topics of data warehousing and mining.

Unit-I	**08 Hrs**
Object and Object-Relational Databases: Overview of Object Database Concepts, Object Database Extensions to SQL , The ODMG Object Model and the Object Definition Language ODL , Object Database Conceptual Design , The Object Query Language OQL , Overview of the C++ Language Binding in the ODMG.	
Unit – II	**10 Hrs**
Distributed Databases, NOSQL Systems: Distributed Database Concepts ,Data Fragmentation, Replication, and Allocation Techniques for Distributed Database Design ,Overview of Concurrency Control and Recovery in Distributed Databases , Overview of Transaction Management in Distributed Databases, Query Processing and Optimization in Distributed Databases, Types of Distributed Database Systems, Distributed Database Architectures, Distributed Catalog Management, Introduction to NOSQL Systems ,The CAP Theorem , Document-Based NOSQL Systems and MongoDB ,NOSQL Key-Value Stores, Column-Based or Wide Column NOSQL Systems , NOSQL Graph Databases and Neo4j.	
Unit -III	**08 Hrs**
Data Warehousing and Online Analytical Processing what is Data Warehouse: Basic Concepts Data Warehouse, Data Warehouse Modelling: Data Cube, A Multidimensional Data Model, Stars, Snowflakes, and Fact Constellations: Schemas for Multidimensional Data Models. Dimensions: The Role of Concept Hirearchies, Measures: The Categorization and Computation. Typical OLAP Operations, Starnet query model for querying multidimensional databases.	
Unit –IV	**08 Hrs**
Mining Frequent Patterns, Associations, and Correlations: Basic Concepts and Methods, Frequent Item set Mining Methods, Which Patterns Are Interesting?—Pattern Evaluation Methods. **Classification:** Basic Concepts, Decision Tree Induction, Bayes Classification Methods, Support Vector Machines.	
Unit –V	**09 Hrs**
Advanced Database Models, Systems, and Applications: Active Database Concepts and Triggers, Temporal Database Concepts, Spatial Database Concepts, Multimedia Database Concepts , Introduction to Deductive Databases.	

LABORATORY WORK

Note: The following experiments may be implemented on MongoDB/Casandra or any other suitable DBMS with support for Object features.

1. Develop a database application to demonstrate the representation of multi valued attributes, and the use of nested tables to represent complex objects. Write suitable queries to demonstrate their use. Consider Purchase Order Example: This example is based on a typical business activity: managing customer orders. Need to demonstrate how the application might evolve from relational to object-relational, and how you could write it from scratch using a pure object oriented approach. a. Show how to implement the schema -- Implementing the Application under the Relational Model.

2. Design and develop an application in NOSQL system.

3. Demonstrate the working of Apriori Algorithm

4. Demonstrate the operations of Slicing , dicing and multidimensional view in data warehouse

Course Outcomes: After completing the course, the students will be able to	
CO1:	Develop solutions using Object oriented database.
CO2:	Acquire knowledge on concepts of distributed database and NOSQL systems
CO3:	Acquire proficiency and Develop appropriate solutions using datamining mining technique.
CO4:	Discover and design appropriate database solutions for different domains.

Scheme of Semester End Examination (SEE); Practical (50 Marks)
SEE for the practical courses will be based on experiment conduction with proper results, is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

Semester I		
Professional Skill Development		
Course Code: 18HSS14		**CIE Marks:** 50
Credits: L: T:P 0:0:3		**SEE Marks: Audit Course**
Hours: 18L		**CIE Duration:** 02 Hrs

Course Learning Objectives: The students will be able to	
1	Understand the importance of verbal and written communication.
2	Improve qualitative and quantitative problem-solving skills.
3	Apply critical and logical think process to specific problems.
4	Manage stress by applying stress management skills.

Communication Skills: Basics of Communication, Personal Skills & Presentation Skills – Introduction, Application, Simulation, Attitudinal Development, Self Confidence, SWOC analysis. **Resume Writing:** Understanding the basic essentials for a resume, Resume writing tips Guidelines for better presentation of facts. Theory and Applications.	**03 Hrs**
Quantitative Aptitude and Data Analysis: Number Systems, Math Vocabulary, fraction decimals, digit places etc. Simple equations – Linear equations, Elimination Method, Substitution Method, Inequalities. Reasoning- a. **Verbal -** Blood Relation, Sense of Direction, Arithmetic & Alphabet. **b. Non- Verbal reasoning - Visual Sequence, Visual analogy and classification.** Analytical Reasoning - Single & Multiple comparisons, Linear Sequencing. Logical Aptitude, - Syllogism, Venn-diagram method, Three statement syllogism, Deductive and inductive reasoning. Introduction to puzzle and games organizing information, parts of an argument, common flaws, arguments and assumptions. **Verbal Analogies/Aptitude** – introduction to different question types – analogies, Grammar review, sentence completions, sentence corrections, antonyms/synonyms, vocabulary building etc. Reading Comprehension, Problem Solving,	**08 Hrs**
Interview Skills: Questions asked & how to handle them, Body language in interview, and Etiquette – Conversational and Professional, Dress code in interview, Professional attire and Grooming, Behavioral and technical interviews, Mock interviews - Mock interviews with different Panels. Practice on Stress Interviews, Technical Interviews, and General HR interviews	**03 Hrs**
Interpersonal and Managerial Skills: Optimal co-existence, cultural sensitivity, gender sensitivity; capability and maturity model, decision making ability and analysis for brain storming; Group discussion (Assertiveness) and presentation skills;	**02 Hrs**

Motivation: Self-motivation, group motivation, Behavioral Management, Inspirational and motivational speech with conclusion. (Examples to be cited). **Leadership Skills:** Ethics and Integrity, Goal Setting, leadership ability.	**02 Hrs**
Note: The respective departments should discuss case studies and standards pertaining to their domain	

Course Outcomes: After completing the course, the students will be able to	
CO1:	Develop professional skill to suit the industry requirement.
CO2:	Analyze problems using quantitative and reasoning skills
CO3:	Develop leadership and interpersonal working skills.
CO4:	Demonstrate verbal communication skills with appropriate body language.

4.	Ethnus, Aptimithra: Best Aptitude Book ,2014 Edition, Tata McGraw Hill ISBN: 9781259058738

Scheme of Continuous Internal Examination (CIE)
Evaluation of CIE will be carried out in TWO Phases.

Phase	Activity	Weightage
I	Test 1 is conducted after completion 9 of hours training program (3 Class) for 50 marks Part A- Quiz for 15 Marks and Part B for 50 Marks (Descriptive answers). The marks are consolidated to 50 Marks.	50%
II	Test 2 is conducted after completion 18 hours of training program (6 Class) for 50 marks Part A- Quiz for 15 Marks and Part B for 50 Marks (Descriptive answers). The marks are consolidated to 50 Marks.	50%
III	Average of TWO tests and the score must be greater than 50% .Two tests are mandatory, 75% attendance mandatory to qualify, if not he / she will not be awarded with M.Tech degree.	

CIE Evaluation shall be done with weightage as follows:

Writing skills	10%
Logical Thinking	25%
Verbal Communication & Body Language	35%
Leadership, Interpersonal and Stress Bursting Skills	30%

SEE: Not Applicable

Semester: I		
Advanced Computer Networks (Group A : Core Elective)		
Course Code: 18MIT1A1		**CIE Marks: 100**
Credits: L:T:P: 3:1:0		**SEE Marks: 100**
Hours: 36L+12T		**SEE Duration: 3Hrs**

Course Learning Objectives:	
1	To become familiar with the basic concepts of Computer Networks.
2	To gain the knowledge of advanced internetworking concepts.
3	To understand the distributed networks and its security.
4	To acquire knowledge for implementation of real world network problems.

Unit-I	**09 Hrs**
Foundation to Networks: Building a Network, Requirements, Perspectives, Scalable Connectivity, Cost-Effective Resource sharing, Support for Common Services, Manageability, Protocol layering, Performance, Bandwidth and Latency, Delay X Bandwidth Product, Perspectives on Connecting, Classes of Links, Reliable Transmission, Stop-and-Wait , Sliding Window, Concurrent Logical Channels.	
Unit – II	**09 Hrs**
Advanced Internetworking- I : Switching and Bridging, Datagrams, Virtual Circuit Switching, Source Routing, Bridges and LAN Switches, Basic Internetworking (IP), What is an Internetwork ?, Service Model, Global Addresses, Datagram Forwarding in IP, subnetting and classless addressing, Address Translation(ARP), Host Configuration(DHCP), Error Reporting(ICMP), Virtual Networks and Tunnels.	
Unit –III	**09 Hrs**
Advanced Internetworking- II : Network as a Graph, Distance Vector (RIP), Link State(OSPF), Metrics, The Global Internet, Routing Areas, Routing among Autonomous systems(BGP), IP Version 6(IPv6), Mobility and Mobile IP.	
Unit –IV	**09 Hrs**
Distributed Network Intelligence and Systems: Cooperative Regression-Based Forecasting in Distributed Traffic Networks, A Sensor Data Aggregation System Using Mobile Agents, Underlay-Aware Distributed Service Discovery Architecture with Intelligent Message Routing, Self-Organizing Maps: The Hybrid SOM–NG Algorithm, A Semi-Supervised and Active Learning Method for Alternatives Ranking Functions.	
Unit –V	**09 Hrs**
Distributed Network Security: Tackling Intruders in Wireless Mesh Networks, Semi-Supervised Learning BitTorrent Traffic Detection, Applications and Trends in Distributed Enterprises: User Activity Recognition through Software Sensors, Multi-Agent Framework for Distributed Leasing-Based Injection Mould Remanufacturing, The Smart Operating Room: smartOR, State of the Art of Service-Level Agreements in Cloud Computing, Used Products Return Service Based on Ambient Recommender Systems to Promote Sustainable Choices.	

Course Outcomes: After completing the course, the students will be able to	
CO1:	Classify network services, protocols and architectures, explain why they are layered.
CO2:	Illustrate the advanced internetworking protocols and their operations.
CO3:	Apply the concepts of distributed networks and tackle security issues.
CO4:	Implement & Design applications using advanced network concepts.

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks):
CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) Solving innovative problems 2) Seminar/new developments in the related course 3) Laboratory/ field work 4) mini project.
Total CIE is 20+50+30 = 100 marks.

Scheme of Semester End Examination (SEE) for 100 marks:
The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Semester: I		
Information Retrieval (Group A : Core Elective)		
Course Code: 18MIT1A2		**CIE Marks: 100**
Credits: L:T:P: 3:1:0		**SEE Marks: 100**
Hours: 36L+12T		**SEE Duration: 3Hrs**

Course Learning Objectives:

1	Explore the various Information Retrieval Techniques such as document indexing and retrieval, query processing, recommender systems, etc.
2	Extract relevant information from large collection of unstructured data or documents.
3	Evaluation of Information retrieval methods
4	Analyze performance of textual document indexing, relevance ranking, web search, etc

Unit-I — **10 Hrs**

Boolean Retrieval:

An example information retrieval problem, A first take at building an inverted index, Processing Boolean queries, The extended Boolean model versus ranked retrieval.

The term Vocabulary and Postings Lists:

Document delineation and character sequence decoding, Obtaining the character sequence in a document, Choosing a document unit, Determining the vocabulary of terms, Tokenization, Dropping common terms: stop words, Normalization (equivalence classing of terms), Stemming and lemmatization, Faster postings list intersection via skip pointers, Positional postings and phrase queries, Bi-word indexes, Positional indexes, Combination schemes.

Unit – II — **09 Hrs**

Dictionaries and tolerant retrieval:

Search structures for dictionaries, Wildcard queries, General wildcard queries, k-gram indexes for wildcard queries, Spelling correction, Implementing spelling correction, Forms of spelling correction, Edit distance, k-gram indexes for spelling correction, Context sensitive spelling correction, Phonetic correction.

Index Construction*:*

Hardware basics, Blocked sort-based indexing, Single-pass in-memory indexing, Distributed indexing, Dynamic indexing and Other types of indexes.

Unit –III — **10 Hrs**

Index compression:

Statistical properties of terms in information retrieval, Heaps' law: Estimating the number of terms, Zipf's law: Modeling the distribution of terms, Dictionary compression, Dictionary as a string, Blocked storage.

Scoring, term weighting and the vector space model:

Parametric and zone indexes, Weighted zone scoring, Learning weights, The optimal weight g, Term frequency and weighting, Inverse document frequency, TF-IDF weighting, The vector space model for scoring, Dot products, Queries as vectors, Computing vector scores.

Unit –IV — **09 Hrs**

Computing scores in a complete search system:

Efficient scoring and ranking, Inexact top K document retrieval, Index elimination, Champion lists, Static quality scores and ordering, Impact ordering, Cluster pruning, Components of an information retrieval system, Tiered indexes, Query-term proximity, Designing parsing and scoring functions. Putting it all together**.**

Evaluation in information retrieval:

Information retrieval system evaluation, Standard test collections, Evaluation of unranked retrieval sets, Evaluation of ranked retrieval results.

Unit –V	10 Hrs
XML retrieval: Basic XML concepts, Challenges in XML retrieval, A vector space model for XML retrieval, Evaluation of XML retrieval, Text-centric vs. data-centric XML retrieval. **Probabilistic information retrieval:** Review of basic probability theory, The Probability Ranking Principle, The Binary Independence Model.	

Course Outcomes: After completing the course, the students will be able to	
CO1 :	Analyze and implement algorithms to extract relevant information from unstructured data using Information retrieval techniques.
CO2 :	Evaluate information retrieval algorithms for document indexing, relevance ranking, web search, query processing, recommender systems, etc.
CO3 :	Apply various information retrieval techniques to retrieve information.
CO4 :	Create information retrieval applications based on various ranking principles and retrieval methods

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks):
CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) Solving innovative problems 2) Seminar/new developments in the related course 3) Laboratory/ field work 4) mini project.
Total CIE is 20+50+30 = 100 marks.

Scheme of Semester End Examination (SEE) for 100 marks:
The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Semester: I		
Software Architecture (Group A : Core Elective)		
Course Code: 18MSE1A3		**CIE Marks: 100**
Credits: L:T:P: 3:1:0		**SEE Marks: 100**
Hours: 36L+12T		**SEE Duration: 3Hrs**

Course Learning Objectives:	
1	To understand Architectural drivers.
2	To study about Quality Attribute workshop.
3	To develop Architectural views and styles.
4	To learn the documentation of architecture.

Unit-I	**09 Hrs**
Introduction and architectural drivers: Introduction – What is software architecture? – Standard Definitions – Architectural structures – Influence of software architecture on organization-both business and technical – Architecture Business Cycle- Introduction – Functional requirements – Technical constraints – Quality Attributes.	
Unit – II	**09 Hrs**
Quality attribute workshop: Quality Attribute Workshop – Documenting Quality Attributes – Six part scenarios – Case studies.	
Unit -III	**09 Hrs**
Architectural views: Introduction – Standard Definitions for views – Structures and views - Representing views-available notations – Standard views – 4+1 view of RUP, Siemens 4 views, SEI's perspectives and views – Case studies.	
Unit –IV	**09 Hrs**
Architectural styles: Introduction – Data flow styles – Call-return styles – Shared Information styles - Event styles – Case studies for each style.	
Unit –V	**09 Hrs**
Documenting the architecture: Good practices – Documenting the Views using UML – Merits and Demerits of using visual languages – Need for formal languages - Architectural Description Languages – ACME – Case studies. Special topics: SOA and Web services – Cloud Computing – Adaptive structures.	

Course Outcomes: After completing the course, the students will be able to	
CO1 :	Ability to understand the software architectural requirements, drivers and to explain about the influence of software architecture on business and technical activities.
CO2 :	Able to analyze the quality attribute workshop and to apply the concept to prepare the documentation on quality attribute
CO3 :	Ability to understand, identify the key architectural structures and to use the views to specify architecture.
CO4 :	Ability to use & evaluate the styles to specify architecture.

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks):
CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) Solving innovative problems 2) Seminar/new developments in the related course 3) Laboratory/ field work 4) mini project.
Total CIE is 20+50+30 = 100 marks.

Scheme of Semester End Examination (SEE) for 100 marks:
The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Semester: I		
Human Computer Interaction (Group B : Core Elective)		
Course Code: 18MIT1B1		**CIE Marks: 100**
Credits: L:T:P: 3:1:0		**SEE Marks: 100**
Hours: 36L+12T		**SEE Duration: 3Hrs**

Course Learning Objectives:	
1	Demonstrate knowledge of human computer interaction design concepts and related methodologies.
2	Recognize how a computer system may be modified to include human diversity and apply theories and concepts associated with effective work design to real-world application.
3	Improve quality and usability of their design, and will understand the theory behind what they do intuitively and design mock ups and carry out user and expert evaluation of interfaces
4	Conceptualise, design and evaluate interactive products systematically.

Unit-I	**09 Hrs**
Usability of Interactive Systems: Introduction, Usability Measures, Usability Motivations, Universal Usability, Goals for Our Profession. **Guidelines, Principles and Theories**: Introduction, Guidelines, Principles, Theories. **Development Processes: Managing Design Processes:** Introduction, Organizational Design to Support Usability, The Four Pillars of Design, Development Methodologies, Ethnographic Observation, Participatory Design, Scenario Development, Social Impact Statement for Early Design Review, Legal Issues.	
Unit – II	**09 Hrs**
Evaluating Interface Designs: Introduction, Expert Reviews, Usability Testing and Laboratories, Survey Instruments, Acceptance Tests, Evaluation During Active Use Controlled Psychologically Oriented Experiments. **Interaction Styles, Direct Manipulation and Virtual Environment :** Introduction Examples of Direct Manipulation, Discussion of Direct Manipulation, 3D Interfaces Teleoperation, Virtual and Augmented Reality. **Menu Selection, Form Fill-in, and Dialog Boxes :** Introduction, Task-Related Menu Organization, Single Menus, Combinations of Multiple Menus, Content Organization Fast Movement through Menus, Data Entry with Menus: Form Fill-in, Dialog Boxes and Alternatives, Audio Menus and Menus for Small Displays	
Unit -III	**09 Hrs**
Command and Natural Languages: Introduction, Command-Organization, Functionality, Strategies, and Structure, Naming and Abbreviations, Natural Language in Computing. **Interaction Devices:** Introduction, Keyboards and Keypads, Pointing Devices Speech and Auditory Interfaces, Displays – Small and Large. **Collaboration and Social Media Participation:** Introduction, Goals of Collaboration and Participation, Asynchronous Distributed Interfaces: Different Place, Different Time Synchronous Distributed Interfaces: Different Place, Same Time, Face-to-Face Interfaces: Same Place, Same Time.	
Unit –IV	**09 Hrs**
Design Issues, Quality of Service: Introduction, Models of Response Time Impacts Expectations and Attitudes, User Productivity, Variability in Response Time, Frustrating Experiences. **Balancing Function and Fashion**: Introduction, Error Messages, Non anthropomorphic Design, Display Design, Web Page Design, Window Design, Color.	

Unit –V	09 Hrs

User Documentation and Online Help:
Introduction, Online versus Paper, Documentation, Reading from Paper versus from Displays, Shaping the Content of the Documentation, Accessing the Documentation, Online Tutorials and Animated Demonstrations, Online Communities for User Assistance, The Development Process.

Information Search:
Introduction, Searching in Textual Documents and Database Querying, Multimedia Document Searches, Advanced Filtering and SearchInterface.

Information Visualization:
Introduction, Data Type by Task Taxonomy, Challenges for Information Visualization.

Course Outcomes: After completing the course, the students will be able to	
CO1:	Explain fundamental design & evaluation methodologies of HCI.
CO2:	Analyse & adopt classic design standards & patterns.
CO3:	Apply effective work design concepts for real world application.
CO4:	Demonstrate knowledge of HCI design concepts & related methodologies.

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks):
CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) Solving innovative problems 2) Seminar/new developments in the related course 3) Laboratory/ field work 4) mini project.
Total CIE is 20+50+30 = 100 marks.

Scheme of Semester End Examination (SEE) for 100 marks:
The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Semester: I		
Enterprise Application Development (Group B : Core Elective)		
Course Code: 18MIT1B2		**CIE Marks: 100**
Credits: L:T:P: 3:1:0		**SEE Marks: 100**
Hours: 36L+12T		**SEE Duration: 3Hrs**

Course Learning Objectives:	
1	Understand the outline of Enterprise application development architecture
2	Comprehend mapping and concurrency process of Enterprise application development.
3	Identify appropriate design methodology to construct enterprise applications to solve a problem
4	Obtain overview of planning of configuration, package structure and layers of enterprise applications

Unit-I	**09 Hrs**
Overview of Enterprise Applications: Introduction, Architecture , Enterprise Applications, Kinds of Enterprise Application, Thinking About Performance , Patterns ,The Structure of the Patterns, Limitations of Patterns, Layering, The Evolution of Layers in Enterprise Applications , The Three Principal Layers, Choosing Where to Run Layers , Organizing Domain Logic, Making a Choice ,Service Layer	
Unit – II	**09 Hrs**
Mapping to Relational Databases: Architectural Patterns ,The Behavioural Problem , Reading in Data , Structural Mapping Patterns , Mapping , Inheritance , Building the Mapping, Double Mapping , Using Metadata , Database Connections, **Web Presentation:** View Patterns, Input control patterns.	
Unit -III	**09 Hrs**
Concurrency and Session State: Concurrency, Concurrency Problems , Execution Contexts , Isolation and Immutability ,Optimistic and Pessimistic Concurrency Control . Preventing Inconsistent Reads, Deadlocks, Transactions ACID, Transactional Resources, Reducing Transaction Isolation for Liveness, Business and System Transactions , Patterns for Offline Concurrency Control , Application Server Concurrency. Session state: Value of statelessness, Session state, Ways to store session state.	
Unit –IV	**09 Hrs**
Distributed Objects: The Allure of Distributed Objects , Remote and Local Interfaces , Where You Have to Distribute, Working with the Distribution Boundary, Interfaces for Distribution, Layers all together: Domain Layer, Data Source Layer, Data Source for Transaction Script , Data Source Table Module, Data Source for Domain Model, The Presentation Layer, Other Layering schemes.	
Unit –V	**09 Hrs**
Constructing Enterprise Applications: Construction Readiness: Defining construction plan, package structure, Setting up Configuration plan, Development environment Defining software construction Map, Constructing Solution layers: Infrastructure services layer, Presentation layer, Business layer, Data access layer, Integration layer component	

Course Outcomes: After completing the course, the students will be able to	
CO1:	Comprehend the concepts of prime layers in Enterprise application development to solve real world problems.
CO2:	Design the architecture of EA through mapping of patterns to database and implementing

	concurrency.
CO3:	Develop Enterprise Application with appropriate Web presentation techniques and Session state attributes.
CO4:	Plan and define software construction map for building layers for enterprise applications.

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks):
CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) Solving innovative problems 2) Seminar/new developments in the related course 3) Laboratory/ field work 4) mini project.
Total CIE is 20+50+30 = 100 marks.

Scheme of Semester End Examination (SEE) for 100 marks:
The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Semester: I		
Soft Computing **(Group B : Core Elective)**		
Course Code: 18MIT1B3		**CIE Marks: 100**
Credits: L:T:P: 3:1:0		**SEE Marks: 100**
Hours: 36L+12T		**SEE Duration: 3Hrs**

Course Learning Objectives:	
1	Understand about the concept of fuzziness involved in various systems.
2	Describe fuzzy logic inference with emphasis on their use in the design of intelligent systems.
3	Comprehend the basics of an evolutionary computing paradigm known as genetic algorithms and its application to engineering optimization problems.
4	Foster competence in recognizing the feasibility and applicability of the design and implementation of intelligent systems (that employ fuzzy logic, genetic algorithm) for specific application areas.

Unit-I	**08 Hrs**
Introduction to Soft Computing, Evolution of Soft Computing, Soft Computing constituents, From conventional Artificial Intelligence to computational Intelligence – Machine learning	
Unit – II	**10 Hrs**
Neural Network, Biological Neuron, Artificial Neuron, Artificial Neural network, basic models, Hebb's learning, Adaline, Perceptron, Multilayer feed forward network, Back propagation, Different issues regarding convergence of Multilayer Perceptron, Competitive learning, Self-organizing Feature Maps, Adaptive Reason Theory, Associative memories, Applications	
Unit -III	**09 Hrs**
Heuristic and Meta Heuristic search, Genetic Algorithm (GA), different operations of Genetic Algorithm, Analysis of selection operations, Hypothesis of building blocks, Schema theorem convergence of Genetic Algorithm, Simulated annealing and Stochastic models, Boltzmann machine, Tabu search, Swarm Intelligence, particle swarm optimization, Applications.	
Unit –IV	**09 Hrs**
Fuzzy sets and Fuzzy logic, Introduction, Fuzzy sets versus crisp sets, operations of fuzzy sets, Extension principle, Fuzzy relations and relation equations, Fuzzy numbers, linguistic variables, linguistic hedges, Fuzzy Decision making, Applications.	
Unit –V	**09 Hrs**
Hybrid systems, Neural-network-Based Fuzzy systems, Fuzzy Logic Based Neural-Networks, Genetic Algorithm for Neural-Network Design and learning, Fuzzy Logic and Genetic Algorithm for optimization, Applications.	

Course Outcomes: After completing the course, the students will be able to	
CO1:	Identify and describe soft computing techniques and their roles in building intelligent machines
CO2:	Recognize the feasibility of applying a soft computing methodology for a particular problem
CO3:	Apply fuzzy logic and reasoning to handle uncertainty and solve engineering problems
CO4:	Apply genetic algorithms to combinatorial optimization problems

4	Neural Networks, Fuzzy Logic and Genetic Algorithms, Rajasekaran and G A V Pai, PHI, 4th Edition, 2003, ISBN - 81-203-2186-3

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks):
CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) Solving innovative problems 2) Seminar/new developments in the related course 3) Laboratory/ field work 4) mini project.
Total CIE is 20+50+30 = 100 marks.

Scheme of Semester End Examination (SEE) for 100 marks:
The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Semester: II		
Cyber Security and Digital Forensics (Theory & Practice)		
Course Code: 18MIT21		**CIE Marks: 150**
Credits: L:T:P: 4:0:1		**SEE Marks: 150**
Hours: 48L		**SEE Duration: 3Hrs**

Course Learning Objectives:

1	Understand the fundamentals of cybercrime and forensics and assess the security policies of organizations.
2	Demonstrate and investigate the use of tools used in digital forensics for investigations.
3	Analyze the different types of forensics and describe its legal challenges.
4	Investigate both criminal and civil matters using evolving digital technology.

Unit-I	**10 Hrs**

Introduction to Cybercrime:
Cybercrime: Definition and Origins of the Word, Cybercrime and Information Security, Who are Cybercriminals? Classifications of Cybercrimes, Cybercrime: The Legal Perspectives, Cybercrimes: An Indian Perspective, Cybercrime and the Indian ITA 2000, A Global Perspective on Cybercrimes, Cybercrime Era: Survival Mantra for the Netizens.

Cyber offenses: How Criminals Plan Them:
How Criminals Plan the Attacks, Social Engineering, Cyberstalking, Cyber cafe and Cybercrimes, Botnets: The Fuel for Cybercrime, Attack Vector, Cloud Computing.

Unit – II	**09 Hrs**

Cybercrime: Mobile and Wireless Devices:
Introduction, Proliferation of Mobile and Wireless Devices, Trends in Mobility, Credit Card Frauds in Mobile and Wireless Computing Era, Security Challenges Posed by Mobile Devices, Registry Settings for Mobile Devices, Authentication Service Security, Attacks on Mobile/Cell Phones, Mobile Devices: Security Implications for organizations, Organizational Measures for Handling Mobile, Organizational Security Policies and Measures in Mobile Computing Era, Laptops.

Unit -III	**10 Hrs**

Understanding the Digital Forensics Profession and Investigations:
An Overview of Digital Forensics, Preparing for Digital Investigations, Maintaining Professional Conduct, Preparing a Digital Forensics Investigation, Procedures for Private-Sector High-Tech Investigations, Understanding Data Recovery Workstations and Software, Conducting an Investigation.

Current Digital Forensics Tools:
Evaluating Digital Forensics Tool Needs, Digital Forensics Software Tools, Digital Forensics Hardware Tools, Validating and Testing Forensics Software.

Unit –IV	**10 Hrs**

Mobile Device Forensics:
Understanding Mobile Device Forensics, Understanding Acquisition Procedures for Mobile Devices.

Cloud Forensics:
An Overview of Cloud Computing, Legal Challenges in Cloud Forensics, Technical Challenges in Cloud Forensics, Acquisitions in the Cloud, Conducting a Cloud Investigation, Tools for Cloud Forensics.

Unit –V	**09 Hrs**

Digital Forensics Analysis and Validation:
Determining What Data to Collect and Analyze, Validating Forensic Data, Addressing Data-Hiding Techniques

Virtual Machine Forensics, Live Acquisitions, and Network Forensics: An Overview of Virtual Machine Forensics, Performing Live Acquisitions, Network Forensics Overview

Lab Component

Demonstrate the application of the following tools using Kali Linux.

Kali Linux

1. **Information Gathering Tools**
   Dnmap, Sparta, Hping3, Netdiscover , Recon-ng
2. **Web Application Analysis Tools**
   Webscarab, HTTrack, Owasp-Zap
3. **Password Attack Tools**
   John The Ripper, Crunch, Ncrack, Wordlist, Rainbowcrack
4. **Sniffing And Snooping Tools**
   MACchanger, Responder, Wireshark, Hamster
5. **Port Exploitation Tools**
   Exe2hex, Weevely, Proxychains
6. **Forensics Tools**
   Foremost, Binwalk, Autopsy
7. **Reporting Tools**
   Pipal, Casefile, Cutycapt, Faraday-Ide, .Magictree

Course Outcomes: After completing the course, the students will be able to	
CO1:	Interpret the basic concepts of cyber security and digital forensics.
CO2:	Compare different software and hardware tools used in validating forensic data.
CO3:	Discuss tool support for detection of various attacks.
CO4:	Demonstrate through use of proper tools knowledge on the cyber security, Cybercrime and forensics.

Continuous Internal Evaluation (CIE): Total marks: 100+50=150

Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks.. A minimum of two assignments are given with a combination of two components among 1) solving innovative problems 2) seminar/new developments in the related course 3) Laboratory/field work 4) mini project. The marks component for each assignment is 15 marks. **Total CIE is 20+50+30=100 Marks.**

Continuous Internal Evaluation (CIE); Practical (50 Marks)
The Laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average of marks over number of weeks is considered for 30 marks. At the end of the semester a test is conducted for 10 marks. The students are encouraged to implement additional innovative experiments in the lab and are rewarded for 10 marks. Total marks for the laboratory is 50.

Semester End Evaluation (SEE): Total marks: 100+50=150
Theory (100 Marks) + Practical (50 Marks) = Total Marks (150)

Scheme of Semester End Examination (SEE) for 100 marks:
The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Scheme of Semester End Examination (SEE); Practical (50 Marks)
SEE for the practical courses will be based on experiment conduction with proper results, is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

Semester: II		
Big Data Science & Analytics (Theory)		
Course Code: 18MIT22		**CIE Marks: 100**
Credits: L:T:P: 3:1:0		**SEE Marks: 100**
Hours: 36L+12T		**SEE Duration: 3Hrs**

Course Learning Objectives:	
1	To introduce the tools, technologies & programming languages used in day to day analytics cycle.
2	To optimize business decisions and create competitive advantage with big data analytics and explore the fundamental concepts of big data analytics.
3	To analyze the big data using intelligent techniques, hadoop eco system, understand the applications using Map Reduce concepts.
4	To use Visualization tools, understand and apply predictive analytics.

Unit-I	**10 Hrs**
Data Analytics Lifecycle: Overview , Key Roles for a Successful Analytics Project , Background and Overview of Data Analytics Lifecyc/e ,Discovery , Learning the Business Domain ,Resources, Framing the Problem , 1dentifying Key Stakeholders ,1nterviewing the Analytics Sponsor , Developing Initial Hypotheses , 1dentifying Potential Data Sources ,Phase 2: Data Preparation , Preparing the Analytic Sandbox , Performing ETLT ,Learning About the Data ,Data Conditioning , Survey and Visualize ,Common Tools for the Data Preparation Phase Phase 3: Model Planning , Data Exploration and Variable Selection ,Model Selection ,Common Tools for the Model Planning Phase 4: Model Building , Common Tools for the Mode/Building Phase , Phase 5: Communicate Results , Phase 6: Operationalize , Case Study: Global Innovation Network and Analysis (GINA) **Review of Basic Data Analytic Methods Using R:** Introduction to R, Exploratory Data Analysis, Statistical Methods for Evaluation	
Unit – II	**10 Hrs**
Advanced Analytical Theory and Methods: Regression : Linear Regression, Logistic Regression, Reasons to Choose and Cautions , Additional Regression Models **Advanced Analytical Theory and Methods:** Classification - Decision Trees, Naive Bayes, Diagnostics of Classifiers, Additional Classification Methods .	
Unit –III	**09 Hrs**
Advanced Analytical Theory and Methods: **Time Series Analysis** -Box-Jenkins Methodology, ARIMA Model, Additional Methods **Advanced Analytical Theory and Methods: Text Analysis:** Text Analysis Steps , A Text Analysis Example, Collecting Raw Text, Representing Text, Term Frequency-Inverse Document Frequency (TFIDF), Categorizing Documents by Topics Determining , Sentiments ,Gaining Insights	
Unit –IV	**07 Hrs**
Advanced Analytics-Technology and Tools: MapReduce and Hadoop- Analytics for Unstructured Data , UseCases, MapReduce, Apache Hadoop,The Hadoop Ecosystem Pig, Hive , HBase, Mahout ,NoSOL	
Unit –V	**09 Hrs**

Advanced Analytics-Technology and Tools: **In-Database Analytics**- SQL Essentials, In-Database Text Analysis, Advanced SqL- Window Functions , User-Defined Functions and Aggregates , Ordered Aggregates , MADiib

Course Outcomes: After completing the course, the students will be able to	
CO1 :	Develop and implement Data Analytics Lifecycle
CO2 :	Perform statistical analysis on Big data
CO3 :	Develop appropriate solutions using key techniques and tools used in Big Data analytics.
CO4 :	Design appropriate database solutions using SQL and in-database text analytics.

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks):
CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) Solving innovative problems 2) Seminar/new developments in the related course 3) Laboratory/ field work 4) mini project.
Total CIE is 20+50+30 = 100 marks.

Scheme of Semester End Examination (SEE) for 100 marks:
The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Semester: II						
RESEARCH METHODOLOGY (Common to all programs)						
Course Code	**:**	**18IM23**		**CIE Marks**	**:**	**100**
Credits L: T: P	**:**	**3:0:0**		**SEE Marks**	**:**	**100**
Hours	**:**	**36L**		**SEE Duration**	**:**	**3 hours**

Unit – I	
Overview of Research: Research and its types, identifying and defining research problem and introduction to different research designs. Essential constituents of Literature Review. Basic principles of experimental design, completely randomized, randomized block, Latin Square, Factorial.	**07 Hrs**
Unit – II	
Data and data collection: Overview of probability and data types Primary data and Secondary Data, methods of primary data collection, classification of secondary data, designing questionnaires and schedules. **Sampling Methods:** Probability sampling and Non-probability sampling	**08 Hrs**
Unit – III	
Processing and analysis of Data: Statistical measures of location, spread and shape, Correlation and regression, Hypothesis Testing and ANOVA. Interpretation of output from statistical software tools	**07 Hrs**
Unit – IV	
Advanced statistical analyses: Non parametric tests, Introduction to multiple regression, factor analysis, cluster analysis, principal component analysis. Usage and interpretation of output from statistical analysis software tools.	**07 Hrs**
Unit-V	
Essentials of Report writing and Ethical issues: Significance of Report Writing , Different Steps in Writing Report, Layout of the Research Report , Ethical issues related to Research, Publishing, Plagiarism **Case studies:** Discussion of case studies specific to the domain area of specialization	**07 Hrs**

Course Outcomes: After going through this course the student will be able to	
CO 1	Explain the principles and concepts of research types, data types and analysis procedures.
CO 2	Apply appropriate method for data collection and analyze the data using statistical principles.
CO 3	Present research output in a structured report as per the technical and ethical standards.
CO 4	Create research design for a given engineering and management problem situation.

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks)
CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) solving innovative problems 2) seminar/new developments in the related course 3) Laboratory/field work 4) mini project. **Total CIE is 20+50+30=100 Marks.**

Scheme of Semester End Examination (SEE) for 100 marks:
The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Semester: II						
MINOR PROJECT						
Course Code	**:**	**18MIT24**		**CIE Marks**	**:**	**100**
Credits L: T: P	**:**	**0:0:4**		**SEE Marks**	**:**	**100**
Credits	**:**	**02**		**SEE Duration**	**:**	**3 hrs**

GUIDELINES
1. Each project group will consist of maximum of two students. 2. Each student / group has to select a contemporary topic that will use the technical knowledge of their program of study after intensive literature survey. 3. Allocation of the guides preferably in accordance with the expertise of the faculty. 4. The number of projects that a faculty can guide would be limited to four. 5. The minor project would be performed in-house. 6. The implementation of the project must be preferably carried out using the resources available in the department/college.

Course Outcomes: After completing the course, the students will be able to	
CO1	Conceptualize, design and implement solutions for specific problems.
CO2	Communicate the solutions through presentations and technical reports.
CO3	Apply resource managements skills for projects.
CO4	Synthesize self-learning, team work and ethics.

Scheme of Continuous Internal Examination

Evaluation will be carried out in 3 phases. The evaluation committee will comprise of 4 members: Guide, Two Senior Faculty Members and Head of the Department.

Phase	Activity	Weightage
I	Synopsys submission, Preliminary seminar for the approval of selected topic and objectives formulation	20%
II	Midterm seminar to review the progress of the work and documentation	40%
III	Oral presentation, demonstration and submission of project report	40%

** Phase wise rubrics to be prepared by the respective departments

CIE Evaluation shall be done with weightage / distribution as follows:

- Selection of the topic & formulation of objectives 10%
- Design and simulation/ algorithm development/ experimental setup 25%
- Conducting experiments/ implementation / testing 25%
- Demonstration & Presentation 15%
- Report writing 25%

Scheme of Semester End Examination (SEE):

The evaluation will be done by ONE senior faculty from the department and ONE external faculty member from Academia / Industry / Research Organization. The following weightages would be given for the examination. Evaluation will be done in batches, not exceeding 6 students.

- Brief write up about the project 05%
- Presentation / Demonstration of the Project 20%
- Methodology and Experimental results & Discussion 25%
- Report 20%

- Viva Voce 30%

Semester: II		
Wireless Networks (Group C : Core Elective)		
Course Code: 18MIT2C1		**CIE Marks: 100**
Credits: L:T:P: 4:0:0		**SEE Marks: 100**
Hours: 48L		**SEE Duration: 3Hrs**

Course Learning Objectives:	
1	Gain Knowledge of fundamental principles of Wireless Networks
2	Comprehend Ad-hoc network protocols in various layers
3	Acquire knowledge on architect sensor networks for various application setups.
4	Explore the design space and conduct trade-off analysis between performance and resources.
5	Assess coverage and conduct node deployment planning.

Unit-I	**10 Hrs**
Modern Wireless Communication Systems: Second generation (2G) cellular networks, Evolution of 2.5G wireless networks and standards, Third Generation (3G) Wireless Networks, Wireless Local Loop (WLL) and LMDS, Wireless Local Area Networks (WLANs), Bluetooth and Personal Area Networks (PANS), duplexing methods, Introduction to Fourth Generation (4G) and Fifth Generation (5G) Wireless Networks, Wireless Interoperability for Microwave Access (WiMAX) – Physical and MAC layer.	
Unit – II	**09 Hrs**
The Cellular Concept-System Design Fundamentals: Introduction, Frequency reuse, channel assignment strategies, handoff strategies – prioritizing handoffs, Practical Handoff considerations, Interference and system capacity, co-channel interference and system capacity, channel planning for wireless systems, adjacent channel interference, power control for reducing interference, Capacity of cellular systems (FDMA and TDMA), Capacity of cellular CDMA systems.	
Unit -III	**10 Hrs**
Ad-hoc Wireless Networks : Introduction, Issues in Ad-hoc Wireless Networks, Adhoc Wireless Internet; **MAC Protocols for Ad-hoc Wireless Networks:** Introduction, Issues in Designing a MAC Protocol, Design Goals of MAC Protocols, Classification of MAC protocols, **Routing Protocols for Ad-hoc Wireless Networks:** Introduction, Issues in Designing a Routing Protocol for Ad-hoc Wireless Networks; Classification of Routing Protocols;	
Unit –IV	**10 Hrs**
Routing Protocols for Ad-hoc Wireless Networks: Table Driven Routing Protocols; On-Demand Routing Protocols, Hybrid Routing Protocols, **Multicast Routing in Ad Hoc Wireless Networks:** An Architecture Reference model for multicast routing protocols, Classifications of Multicast Routing Protocols, Tree based multicast routing protocols: Bandwidth Efficient multicast routing protocol, Mesh based multicast routing protocol: On-demand multicast routing protocol, A distributed Power aware multicast routing protocol.	
Unit –V	**09 Hrs**
Wireless Sensor Networks: Introduction, Sensor Network Architecture, Data Dissemination: Flooding, Directed Diffusion, Cost-Field approach, Data Gathering, MAC protocols for sensor networks, Location Discovery, Other issues, wireless Fidelity systems.	

Course Outcomes: After completing the course, the students will be able to	
CO1:	Analyse the existing wireless networks and issues
CO2:	Realizing the concepts of cellular networks
CO3:	Acquire appropriate knowledge to exploit the benefits and routing of wireless adhoc networks
CO4:	Exploring the technology of sensor networks.

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks):
CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) Solving innovative problems 2) Seminar/new developments in the related course 3) Laboratory/ field work 4) mini project.
Total CIE is 20+50+30 = 100 marks.

Scheme of Semester End Examination (SEE) for 100 marks:
The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Semester: II		
Distributed Computing (Group C : Core Elective)		
Course Code: 18MIT2C2		**CIE Marks: 100**
Credits: L:T:P: 4:0:0		**SEE Marks: 100**
Hours: 43L		**SEE Duration: 3Hrs**

Course Learning Objectives:	
1	Understand and remember the basic concepts of distributed system management (DSM).
2	Apply the concepts of load balancing, process management, fault tolerance in DSM.
3	Evaluate and analyze the concepts of distributed file systems through case studies.
4	Implement and design the security concepts in distributed computing systems.

Unit-I	**10 Hrs**
Distributed System management: Introduction, Resource management, Task Assignment Approach, Load-Balancing Approach, Load-Sharing Approach, Process management in a Distributed Environment, Process Migration, Threads, Fault Tolerance.	
Unit – II	**09 Hrs**
Distributed Shared Memory: Introduction, Basic Concepts of DSM, Hardware DSM, Design Issue in DSM Systems, Issue in Implementing DSM Systems, Heterogeneous and Other DSM Systems, Case Studies.	
Unit -III	**07 Hrs**
Distributed File System: Introduction to DFS, File Models, Distributed File System Design, Semantics of File Sharing, DFS Implementation, File Caching in DFS, Replication in DFS, Case studies. **Naming**: Introduction, Desirable features of a good naming system, Basic concepts, System-oriented names, Object-locating mechanisms, Issues in designing human-oriented names, Name caches, Naming and security, Case study: Domain name service.	
Unit –IV	**08 Hrs**
Security in distributed systems: Introduction, Cryptography, Secure channels, Access control, Security Management, Case studies, Developing a Content Distribution System over a Secure Peer-to-Peer Middleware.	
Unit –V	**09 Hrs**
Real-Time Distributed Operating Systems: Introduction, Design issues in real-time distributed systems, Real-time communication, Real-time scheduling, Case study: Real-time communication in MARS, Distributed Online Safety Monitor Based on Multi-Agent System and AADL Safety Assessment Model. Emerging Trends in distributed Computing: Introduction to emerging trends, Grid Computing, SOA, Cloud computing, the future of emerging Trends.	

Course Outcomes: After completing the course, the students will be able to	
CO1 :	Understand distributed computing concept and process management.
CO2 :	Identify the design issues of distributed system and hardware concepts.
CO3 :	Analyze advantages of DFS and its security issues.
CO4 :	Apply mechanisms to manage security in Distributed Systems through understanding of real time DoS.

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks):
CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) Solving innovative problems 2) Seminar/new developments in the related course 3) Laboratory/ field work 4) mini project.
Total CIE is 20+50+30 = 100 marks.

Scheme of Semester End Examination (SEE) for 100 marks:
The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Semester: II		
Computer System Performance & Analysis (Group C : Core Elective)		
Course Code: 18MIT2C3		**CIE Marks: 100**
Credits: L:T:P: 4:0:0		**SEE Marks: 100**
Hours: 45L		**SEE Duration: 3Hrs**

Course Learning Objectives:	
1	Comprehend the need for performance evaluation and its systematic approach.
2	Explore various types of monitoring and capacity planning techniques.
3	Formulate experiments with various levels and factors.
4	Demonstrate working of various queues, their representations and rules.

Unit-I	**09 Hrs**
Introduction: The art of Performance Evaluation, Common mistakes in Performance Evaluation, A systematic approach to Performance Evaluation, Selecting an evaluation technique. **Metrics of Performance:** What is a performance metric? Characteristics of a good performance metric, Processor and system performance metrics, Other types of performance metrics, Speedup and relative change, Means versus ends metrics, Summary.	
Unit – II	**09 Hrs**
Average Performance and Variability: Why mean values? Indices of central tendency, Other types of means**,** Quantifying variability, Summary. **Errors in Experimental Measurements:** Accuracy, precision, and resolution, Sources of errors, A model of errors, Quantifying errors.	
Unit –III	**09 Hrs**
Comparing Alternatives: Comparing two alternatives, Comparing more than two alternatives, Summary, For further reading, Exercises. **Measurement Tools and Techniques:** Events and measurement strategies, Interval timers, Program profiling, Event tracing, Indirect and ad hoc measurements, Perturbations due to measuring.	
Unit –IV	**09 Hrs**
Benchmark Programs: Types of benchmark programs, benchmark strategies, example of benchmark programs, summary. **Linear regression models:** Least squares minimization, confidence intervals for regression parameters, correlation, multiple linear regression, verifying linearity, nonlinear models, summary.	
Unit –V	**09 Hrs**
The design of experiments: Types of experiments, terminology, two factor experiments, generalized m-factor experiments, $n2^m$ experiments, summary. **Queueing Analysis:** Queuing Network models, basic assumptions and notation, Operational analysis, stochastic analysis, summary.	

Course Outcomes: After completing the course, the students will be able to	
CO1 :	Comprehend the need for performance evaluation and its systematic approach.
CO2 :	Apply performance measurement techniques to evaluate computer systems.
CO3	Design and analyse various performance evaluation techniques.

:	
CO4 :	Compare and evaluate performance of computer systems using sophisticated models.

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks):
CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) Solving innovative problems 2) Seminar/new developments in the related course 3) Laboratory/ field work 4) mini project.
Total CIE is 20+50+30 = 100 marks.

Scheme of Semester End Examination (SEE) for 100 marks:
The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Semester: II		
Virtual Reality **(Group D : Core Elective)**		
Course Code: 18MIT2D1		**CIE Marks: 100**
Credits: L:T:P: 4:0:0		**SEE Marks: 100**
Hours: 45L		**SEE Duration: 3Hrs**

Course Learning Objectives:	
1	To understand geometric modelling and Virtual environment.
2	To study about Virtual Hardwares and Software.
3	To develop Virtual Reality applications.
4	To analyse the need of virtual reality applications.

Unit-I	**09 Hrs**
Introduction to virtual reality: Virtual Reality & Virtual Environment : Introduction – Computer graphics – Real time computer graphics –Flight Simulation – Virtual environments –requirement – benefits of virtual reality- Historical development of VR : Introduction – Scientific Landmark -3D Computer Graphics :Introduction – The Virtual world space – positioning the virtual observer – the perspective projection – human vision – stereo perspective projection – 3D clipping – Colour theory – Simple 3D modelling – Illumination models – Reflection models – Shading algorithms- Radiosity – Hidden Surface Removal – Realism-Stereographic image.	
Unit – II	**09 Hrs**
Geometric modelling: Geometric Modelling: Introduction – From 2D to 3D – 3D space curves – 3D boundary representation - Geometrical Transformations: Introduction – Frames of reference – Modelling transformations – Instances –Picking – Flying – Scaling the VE – Collision detection - A Generic VR system: Introduction – The virtual environment – the Computer environment – VR Technology – Model of interaction – VR Systems.	
Unit -III	**09 Hrs**
Virtual environment: Animating the Virtual Environment: Introduction – The dynamics of numbers – Linear and Non-linear interpolation - The animation of objects – linear and non- linear translation - shape & object in between – free from deformation – particle system- Physical Simulation : Introduction – Objects falling in a gravitational field – Rotating wheels – Elastic collisions – projectiles – simple pendulum – springs – Flight dynamics of an aircraft.	
Unit –IV	**09 Hrs**
VR Hardwares & softwares: Human factors : Introduction – the eye - the ear- the somatic senses - VR Hardware : Introduction – sensor hardware – Head-coupled displays –Acoustic hardware – Integrated VR systems-VR Software: Introduction –Modelling virtual world –Physical simulation- VR toolkits – Introduction to VRML.	
Unit –V	**09 Hrs**
VR Application : Virtual Reality Applications: Introduction – Engineering – Entertainment – Science – Training – The Future: Introduction – Virtual environments – modes of interaction.	

Course Outcomes: After completing the course, the students will be able to	
CO1 :	Adopt various principles and concepts of virtual reality and its application.
CO2 :	Apply appropriate method of geometric modelling
CO3 :	Formulate virtual environment for a given engineering problem and VR simulation for problem situation.
CO4	Analyze various VR software in a structured manner and prepare report as per the technical

:	standards.

The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Semester: II		
Information Storage and Management **(Group D : Core Elective)**		
Course Code: 18MIT2D2		**CIE Marks: 100**
Credits: L:T:P:S: 4:0:0		**SEE Marks: 100**
Hours: 45L		**SEE Duration: 3Hrs**
Course Learning Objectives:		
1	Interpret the storage architectures and demonstrate the logical and physical components of a storage infrastructure including storage subsystems, RAID and Intelligent storage systems	
2	Analyze storage networking technologies such as FC-SAN, NAS, IP-SAN, data archival solutions and virtualization technologies.	
3	Apply and articulate business continuity solutions including backup technologies, local and remote replication solutions.	
4	Identify security parameters for managing and monitoring storage infrastructure	

Unit-I	**09 Hrs**
Introduction to Information Storage: Information Storage, Evolution of Storage Architecture, Data center Infrastructure, Virtualization and cloud computing. **Data Center Environment**: Application, Database Management System(DBMS), Host(compute), Connectivity, Storage, Disk Drive Components, Disk Drive Performance, Host Access to Data, Direct-Attached Storage, Storage Design Based On Application, Disk Native Command Queuing, Introduction to Flash Drives, Concept in Practice: VMware ESXi. **Data Protection: RAID:** RAID Implementation Methods, RAID Array Components, RAID Techniques, RAID Levels, RAID Impact on Disk Performance, RAID Comparison, Hot Spares.	
Unit – II	**09 Hrs**
Intelligent Storage Systems: Components of an Intelligent Storage System, Storage Provisioning, Types of intelligent Storage Systems, Concepts in Practice: EMC Symmetrix and VNX. Fibre Channel Storage Area Networks: **Fiber Channel: Overview:** The SAN and Its Evolution, Components of FC SAN, FC Connectivity, Switched Fabric Ports, Fibre Channel Architecture, fabric Services, Switched fabric Login Types, Zoning, FC SAN Topologies, Virtualization in SAN, Concepts in Practice: EMC Connectrix and EMC VPLEX **.IP SAN and FcoE**: iSCSI, FCIP, FcoE.	
Unit –III	**09 Hrs**
Network-Attached Storage: General-purpose Servers versus NAS Devices, benefits of NAS, File Systems and network File Sharing. Components of NAS, NAS I/O Operation, NAS Implementations, NAS File-Sharing Protocols, factors Affecting NAS Performance, File-Level Virtualization, Concepts in Practice: EMC Isilon and EMC VNX gateway. **Object-Based and unified Storage:** Object-Based Storage Devices, Content-Addressed Storage, CAS use Cases, unified Storage, Concepts in Practice: EMC atoms, EMC VNX, and EMC centera . **Introduction to Business Continuity**: Information Availability, BC Terminology, BC Planning life Cycle, failure Analysis, Business Impact Analysis, BC Technology solutions.	
Unit –IV	**09 Hrs**
Backup and Archive: Backup Purpose, Backup Considerations, Backup Granularity, Recovery Considerations, Backup	

Methods, Backup Architecture, Backup and Restore Operation, Backup Topologies, Backup in NAS Environments, Backup Targets, Data Dedupulication for Backup, Backup in Virtualized Environments, Data Archive ,Archiving Solution Architecture, Concepts in Practice :EMC Networker, EMC Avamar, and EMC Data domain.

Local Replication:

Replication Terminology, Uses of Local Replicas, Replica Consistency, Local Replication Technologies, Tracking Changes to Source and Replica, Restore and Restart Considerations, Creating Multiple Replicas, Local Replication in Virtualized Environment, Concepts in Practice: EMC TimeFinder.

Remote Replication:

Modes of Remote Replication, Remote Replication Technologies, Three-Site Replication, Data Migration Solutions, Remote Replication and Migration in a Virtualized Environment, Concepts in Practice : EMC SRDF, EMC MirrorView, and EMC RecoverPoint

Unit –V	**09 Hrs**

Securing the Storage Infrastructure:

Information Security Framework, Risk Triad, Storage Security Domains, Security implementations in Storage Networking, Securing Storage Infrastructure in Virtualized and Cloud Environments, Concepts in practice: RSA and VMware Security Products.

Managing the Storage Infrastructure:

Monitoring the Storage Infrastructure, Storage Infrastructure Management Activities, Storage Infrastructure Management Challenges, Developing an Ideal Solution, Information Lifecycle Management, Storage Tiering, Concepts in Practice: EMC Infrastructure.

Course Outcomes: After completing the course, the students will be able to	
CO1 :	Identify the decisive role and key challenges in managing information and analyze different storage networking and virtualization technologies.
CO2 :	Analyze the SAN and NAS deployment for file and data sharing for a collaborative development environment of organizations.
CO3 :	Apply backup, recovery, and archival solutions for business critical data.
CO4 :	Evaluate various replication solutions to meet different business continuity needs and address security concerns to perform monitoring and management of information infrastructure.

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks):

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) Solving innovative problems 2) Seminar/new developments in the related course 3) Laboratory/ field work 4) mini project.

Total CIE is 20+50+30 = 100 marks.

Scheme of Semester End Examination (SEE) for 100 marks:

The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Semester: II		
Software Project Management **(Group D : Core Elective)**		
Course Code: 18MSE2D3		**CIE Marks: 100**
Credits: L:T:P: 4:0:0		**SEE Marks: 100**
Hours: 46L		**SEE Duration: 3Hrs**
Course Learning Objectives:		
1	To define and highlight importance of software project management	
2	To formulate strategy in managing projects.	
3	To estimate the cost associated with a project.	
4	To plan, schedule and monitor projects for the risk management.	

Unit-I	**10 Hrs**
Metrics: Introduction, The Metrics Roadmap, A Typical Metrics Strategy, What Should you Measure?, Set Targets and track Them, Understanding and Trying to minimize variability, Act on data, People and Organizational issues in Metrics Programs, Common Pitfalls to watch out for in Metrics Programs, Matrices implementation checklists and tools **Software configuration management:** Introduction, Some Basic Definitions and terminology, the processes and activities of software configuration management, configuration status accounting, configuration audit, software configuration management in geographically distributed teams, Metrics in software configuration management, software configuration management tools and automation	
Unit – II	**09 Hrs**
Risk Management: Introduction, What is risk management and why is it important?, Risk management cycle, Risk identification: common tools and techniques, Risk Quantifications, Risk Monitoring, Risk Mitigation, Risks and Mitigation in the context of global project teams, some practical techniques risk management, Metrics in risk management. **Project Planning and Tracking:** Components of Project Planning and Tracking, The “What “ Part of a Project Plan, The “What Cost “ Part of a Project Plan, The “When “ Part of Project Planning, The “How “ Part of a Project Planning: Tailoring of Organizational Processes For the Project, The “ By Whom “ Part of the Project Management Plan : Assigning Resources, Putting it all together : The Software Management Plan, Activities Specific to Project Tracking, Interfaces to the Process Database. **Project Closure:** When Does Project Closure Happen?. Why Should We Explicitly do a Closure?, An Effective Closure Process, Issues that Get Discussed During Closure, Metrics for Project Closure, Interfaces to the Process Database.	
Unit -III	**09 Hrs**
Software Requirements gathering: Inputs and start criteria for requirements gathering, Dimensions of requirements gathering, Steps to be followed during requirements gathering, outputs and quality records from the requirements phase, skill sets required during requirements phase, differences for a shrink-wrapped software, challenges during the requirements management phase, Metrics for requirements phase. **Estimation:** What is Estimation? when and why is Estimation done?, the three phases of Estimation, Estimation methodology, formal models for size Estimation, Translating size Estimate into effort Estimate, Translating effort Estimates into schedule Estimate, common challenges during Estimation , Metrics for the Estimation processes.	

Design and Development Phases: Some differences in our chosen approach, salient features of design, evolving an architecture/ blueprint, design for reusability, technology choices/constraints, design to standards, design for portability, user interface issues, design for testability, design for diagnose ability, design for maintainability, design for install ability, inter-operability design, challenges during design and development phases, skill sets for design and development, metrics for design and development phases.
09 Hrs
Project management in the testing phase: Introduction, What is testing?, what are the activities that makeup testing?, test scheduling and types of tests, people issues in testing, management structures for testing in global teams, metrics for testing phase. **Project management in the Maintenance Phase:** Introduction, Activities during Maintenance Phase, management issues during Maintenance Phase, Configuration management during Maintenance Phase, skill sets for people in the maintenance phase, estimating size, effort, and people resources for the maintenance phase, advantages of using geographically distributed teams for the maintenance phase, metrics for the maintenance phase.
Unit –V **09 Hrs**
Globalization issues in project management: Evolution of globalization, challenges in building global teams, Models for the execution of global projects, some effective management techniques for managing global teams. **Impact of the internet on project management:** Introduction, the effect of internet on project management, managing projects for the internet, Effect on the project management activities. **People focused process models:** Growing emphasis on people centric models, people capability maturity model (P-CMM), other people focused models in the literature, how does an organization choose the models to use?

Course Outcomes: After completing the course, the students will be able to	
CO1:	Understand the importance of metrics in project management.
CO2:	Formulate the strategy for project planning & progressing.
CO3:	Apply the knowledge of project management in project development.
CO4:	Realize globalization issues in project management.

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks):
CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two

assignments are given with a combination of two components among 1) Solving innovative problems 2) Seminar/new developments in the related course 3) Laboratory/ field work 4) mini project.
Total CIE is 20+50+30 = 100 marks.

Scheme of Semester End Examination (SEE) for 100 marks:
The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.
.

Semester: II						
BUSINESS ANALYTICS (Group G: Global Elective)						
Course Code	**:**	**18CS2G01**		**CIE Marks**	**:**	**100**
Credits L: T: P	**:**	**3:0:0**		**SEE Marks**	**:**	**100**
Hours	**:**	**36L**		**SEE Duration**	**:**	**3 hrs**

Course Learning Objectives:
Graduates shall be able to
1. Formulate and solve business problems to support managerial decision making.
2. Explore the concepts, processes needed to develop, report, and analyze business data.
3. Use data mining techniques concepts to identify specific patterns in the data
4. Interpret data appropriately and solve problems from various sectors such as manufacturing, service, retail, software, banking and finance.

Unit – I	
Business analytics: Overview of Business analytics, Scope of Business analytics, Business Analytics Process, Relationship of Business Analytics Process and organization, competitive advantages of Business Analytics. Statistical Tools: Statistical Notation, Descriptive Statistical methods, Review of probability distribution and data modelling.	**07 Hrs**
Unit – II	
Trendiness and Regression Analysis: Modelling Relationships and Trends in Data, simple Linear Regression. Important Resources, Business Analytics Personnel, Data and models for Business analytics, problem solving, Visualizing and Exploring Data, Business Analytics Technology.	**07 Hrs**
Unit – III	
Organization Structures of Business analytics, Team management, Management Issues, Designing Information Policy, Outsourcing, Ensuring Data Quality, Measuring contribution of Business analytics, Managing Changes. Descriptive Analytics, Predictive Analytics, Predicative Modelling, Predictive analytics analysis.	**07 Hrs**
Unit – IV	
Forecasting Techniques: Qualitative and Judgmental Forecasting, Statistical Forecasting Models, Forecasting Models for Stationary Time Series, Forecasting Models for Time Series with a Linear Trend, Forecasting Time Series with Seasonality, Regression Forecasting with Casual Variables, Selecting Appropriate Forecasting Models.	**08 Hrs**
Unit –V	
Decision Analysis: Formulating Decision Problems, Decision Strategies with and without Outcome, Probabilities, Decision Trees, The Value of Information, Utility and Decision Making.	**07 Hrs**

Course Outcomes: After going through this course the student will be able to:

CO1	Explore the concepts, data and models for Business Analytics.
CO2	Analyze various techniques for modelling and prediction.
CO3	Design the clear and actionable insights by translating data.
CO4	Formulate decision problems to solve business applications

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks)
CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) solving innovative problems 2) seminar/new developments in the related course 3) Laboratory/field work 4) mini project.
Total CIE is 20+50+30=100 Marks.

Scheme of Semester End Examination (SEE) for 100 marks:
The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Semester: II		
INDUSTRIAL AND OCCUPATIONAL HEALTH AND SAFETY (Group G :Global Elective)		
Course Code: 18CV 2G 02		**CIE Marks:100**
Credits : L: T: P : 3:0:0		**SEE Marks :100**
Hours : 36L		**SEE Duration:3Hrs**

Course Learning Objectives :	
1	To understand the Industrial and Occupational health and safety and its importance.
2	To understand the different materials, occupations to which the employee can exposed to.
3	To know the characteristics of materials and effect on health.
4	To evaluate the different processes and maintenance required in the industries to avoid accidents.

UNIT – I	**7Hrs**
Industrial safety: Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes. Fire prevention and fire fighting, equipment and methods.	
UNIT – II	**7Hrs**
Occupational health and safety: Introduction, Health, Occupational health: definition, Interaction between work and health, Health hazards, workplace, economy and sustainable development, Work as a factor in health promotion. Health protection and promotion Activities in the workplace: National governments, Management, Workers, Workers' representatives and unions, Communities, Occupational health professionals. Potential health hazards: Air contaminants, Chemical hazards, Biological hazards, Physical hazards, Ergonomic hazards, Psychosocial factors, Evaluation of health hazards: Exposure measurement techniques, Interpretation of findings recommended exposure limits. Controlling hazards: Engineering controls, Work practice controls, Administrative controls. Occupational diseases: Definition, Characteristics of occupational diseases, Prevention of occupational diseases.	
UNIT – III	**8Hrs**
Hazardous Materials characteristics and effects on health: Introduction, Chemical Agents, Organic Liquids, Gases, Metals and Metallic Compounds, Particulates and Fibers, Alkalies and Oxidizers, General Manufacturing Materials, Chemical Substitutes, Allergens, Carcinogens, Mutagens, Reproductive Hazards, Sensitizers and Teratogens, Recommended Chemical Exposure Limits. Physical Agents, Noise and Vibration, Temperature and Pressure, Carcinogenicity, Mutagenicity and Teratogenicity. Ergonomic Stresses: Stress-Related Health Incidents, Eyestrain, Repetitive Motion, Lower Back Pain, Video Display Terminals.	
UNIT – IV	**7Hrs**
Wear and Corrosion and their prevention: Wear- types, causes, effects, wear reduction methods, lubricants-types and applications, Lubrication methods, general sketch, working and applications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity lubrication, v. Wick feed lubrication vi. Side feed lubrication, vii. Ring lubrication, Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods.	
UNIT – V	**7Hrs**

Periodic and preventive maintenance: Periodic inspection-concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components, over hauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of: I. Machine tools, ii. Pumps, iii. Air compressors, iv. Diesel generating (DG) sets, Program and schedule of preventive maintenance of mechanical and electrical equipment, advantages of preventive maintenance. Repair cycle concept and importance.		
Expected Course Outcomes: After successful completion of this course the student will be able to:		
CO1	Explain the Industrial and Occupational health and safety and its importance.	
CO2	Demonstrate the exposure of different materials, occupational environment to which the employee can expose in the industries.	
CO3	Characterize the different type materials, with respect to safety and health hazards of it.	
CO4	Analyze the different processes with regards to safety and health and the maintenance required in the industries to avoid accidents.

Continuous Internal Evaluation (CIE): Total marks: 100
Continuous Internal Evaluation (CIE); Theory (100 Marks)
CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks.A minimum of two assignments are given with a combination of two components among 1) solving innovative problems 2) seminar/new developments in the related course 3) Laboratory/field work 4) mini project.
Total CIE is 20+50+30=100 Marks.

Semester End Evaluation (SEE): Total marks: 100
Scheme of Semester End Examination (SEE) for 100 marks:
The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Semester: II						
MODELING USING LINEAR PROGRAMMING (Group G: Global Elective)						
Course Code	**:**	**18IM2G03**		**CIE Marks**	**:**	**100**
Credits L: T: P	**:**	**3:0:0**		**SEE Marks**	**:**	**100**
Hours	**:**	**36L**		**SEE Duration**	**:**	**3 hrs**

Unit – I	
Linear Programming: Introduction to Linear Programming problem **Simplex methods:** Variants of Simplex Algorithm – Use of Artificial Variables	**07 Hrs**
Unit – II	
Advanced Linear Programming : Two Phase simplex techniques, Revised simplex method **Duality:** Primal-Dual relationships, Economic interpretation of duality	**07 Hrs**
Unit – III	
Sensitivity Analysis: Graphical sensitivity analysis, Algebraic sensitivity analysis - changes in RHS, Changes in objectives, Post optimal analysis - changes affecting feasibility and optimality	**07 Hrs**
Unit – IV	
Transportation Problem: Formulation of Transportation Model, Basic Feasible Solution using North-West corner, Least Cost, Vogel's Approximation Method, Optimality Methods, Unbalanced Transportation Problem, Degeneracy in Transportation Problems, Variants in Transportation Problems.	**08 Hrs**
Unit –V	
Assignment Problem: Formulation of the Assignment problem, solution method of assignment problem-Hungarian Method, Variants in assignment problem, Travelling Salesman Problem (TSP).	**07 Hrs**

Course Outcomes: After going through this course the student will be able to:	
CO 1	Explain the various Linear Programming models and their areas of application.
CO 2	Formulate and solve problems using Linear Programming methods.
CO 3	Develop models for real life problems using Linear Programming techniques.
CO 4	Analyze solutions obtained through Linear Programming techniques.

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) solving innovative problems 2) seminar/new developments in the related course 3) Laboratory/field work 4) mini project. **Total CIE is 20+50+30=100 Marks.**

Scheme of Semester End Examination (SEE) for 100 marks:

The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Semester: II						
PROJECT MANAGEMENT (Group G: Global Elective)						
Course Code	**:**	**18IM2G04**		**CIE Marks**	**:**	**100**
Credits L: T: P	**:**	**3:0:0**		**SEE Marks**	**:**	**100**
Hours	**:**	**36L**		**SEE Duration**	**:**	**3 hrs**

Unit – I	
Introduction: Project Planning, Need of Project Planning, Project Life Cycle, Roles, Responsibility and Team Work, Project Planning Process, Work Breakdown Structure (WBS), Introduction to Agile Methodology.	**07 Hrs**
Unit – II	
Capital Budgeting: Capital Investments: Importance and Difficulties, phases of capital budgeting, levels of decision making, facets of project analysis, feasibility study – a schematic diagram, objectives of capital budgeting	**07 Hrs**
Unit – III	
Project Costing: Cost of Project, Means of Finance, Cost of Production, Working Capital Requirement and its Financing, Profitability Projections, Projected Cash Flow Statement, Projected Balance Sheet, Multi-year Projections, Financial Modeling, Social Cost Benefit Analysis	**08 Hrs**
Unit – IV	
Tools & Techniques of Project Management: Bar (GANTT) chart, bar chart for combined activities, logic diagrams and networks, Project evaluation and review Techniques (PERT) Critical Path Method (CPM), Computerized project management	**07Hrs**
Unit-V	
Project Management and Certification: An introduction to SEI, CMMI and project management institute USA – importance of the same for the industry and practitioners. PMBOK 6 - Introduction to Agile Methodology, Themes / Epics / Stories, Implementing Agile. **Domain Specific Case Studies on Project Management:** Case studies covering project planning, scheduling, use of tools & techniques, performance measurement.	**07 Hrs**

Course Outcomes: After going through this course the student will be able to:	
CO 1	Explain project planning activities that accurately forecast project costs, timelines, and quality.
CO 2	Evaluate the budget and cost analysis of project feasibility.
CO	Analyze the concepts, tools and techniques for managing projects.

3	
CO 4	Illustrate project management practices to meet the needs of Domain specific stakeholders from multiple sectors of the economy (i.e. consulting, government, arts, media, and charity organizations).

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) solving innovative problems 2) seminar/new developments in the related course 3) Laboratory/field work 4) mini project. **Total CIE is 20+50+30=100 Marks.**

Scheme of Semester End Examination (SEE) for 100 marks:

The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

II Semester		
ENERGY MANAGEMENT (Group G: Global Elective)		
Course Code: 18CH2G05		**CIE Marks: 100**
Credits: L:T:P: 3:0:0		**SEE Marks: 100**
Hours: 36L		**SEE Hrs: 3**

Course Learning Objectives(CLO):
Students are able to: 1. Explain the importance of energy conservation and energy audit. 2. Understand basic principles of renewable sources of energy and technologies. 3. Outline utilization of renewable energy sources for both domestics and industrial application. 4. Analyse the environmental aspects of renewable energy resources.

Unit-I	**08 Hrs**
Energy conservation: Principles of energy conservation, Energy audit and types of energy audit, Energy conservation approaches, Cogeneration and types of cogeneration, Heat Exchangers and classification.	
Unit-II	**07 Hrs**
Wet Biomass Gasifiers: Introduction, Classification of feedstock for biogas generation, Biomass conversion technologies: Wet and dry processes, Photosynthesis, Biogas generation, Factors affecting bio-digestion, Classification of biogas plants, Floating drum plant and fixed dome plant their advantages and disadvantages.	
Unit -III	**07 Hrs**
Dry Biomass Gasifiers : Biomass energy conversion routes, Thermal gasification of biomass, Classification of gasifiers, Fixed bed systems: Construction and operation of up draught and down draught gasifiers.	
Unit -IV	**07 Hrs**
Solar Photovoltaic: Principle of photovoltaic conversion of solar energy, Types of solar cells and fabrication. **Wind Energy:** Classification, Factors influencing wind, WECS & classification.	
Unit -V	**07 Hrs**

Alternative liquid fuels:
Introduction, Ethanol production: Raw materials, Pre-treatment, Conversion processes with detailed flow sheet. Gasification of wood: Detailed process, Gas purification and shift conversion, Biofuel from water hyacinth.

Course outcomes (CO):
On completion of the course, the student should have acquired the ability to CO1: Understand the use alternate fuels for energy conversion CO2: Develop a scheme for energy audit CO3: Evaluate the factors affecting biomass energy conversion CO4: Design a biogas plant for wet and dry feed

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks):
CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) Solving innovative problems 2) Seminar/new developments in the related course 3) Laboratory/ field work 4) mini project.
Total CIE is 20+50+30 = 100 marks.

Scheme of Semester End Examination (SEE) for 100 marks:
The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Semester: II						
INDUSTRY 4.0 **(Group G: Global Elective)**						
Course Code	**:**	**18ME2G06**		**CIE Marks**	**:**	**100**
Credits L: T: P	**:**	**3:0:0**		**SEE Marks**	**:**	**100**
Hours	**:**	**36L**		**SEE Duration**	**:**	**3 hrs**

Unit – I	
Introduction: Industrial, Internet, Case studies, Cloud and Fog, M2M Learning and Artificial Intelligence, AR, Industrial Internet Architecture Framework (IIAF), Data Management.	**07 Hrs**
Unit – II	
The Concept of the IIoT: Modern Communication Protocols, Wireless Communication Technologies, Proximity Network Communication Protocols, TCP/IP, API: A Technical Perspective, Middleware Architecture.	**07 Hrs**
Unit – III	
Data Analytics in Manufacturing: Introduction, Power Consumption in manufacturing, Anomaly Detection in Air Conditioning, Smart Remote Machinery Maintenance Systems with Komatsu, Quality Prediction in Steel Manufacturing. Internet of Things and New Value Proposition, Introduction, Internet of Things Examples, IoTs Value Creation Barriers: Standards, Security and Privacy Concerns. Advances in Robotics in the Era of Industry 4.0, Introduction, Recent Technological Components of Robots, Advanced Sensor Technologies, Artificial Intelligence, Internet of Robotic Things, Cloud Robotics.	**08 Hrs**
Unit – IV	
Additive Manufacturing Technologies and Applications: Introduction, Additive Manufacturing (AM) Technologies, Stereo lithography, 3DP, Fused Deposition Modeling, Selective Laser Sintering, Laminated Object Manufacturing, Laser Engineered Net Shaping, Advantages of Additive Manufacturing, Disadvantages of Additive Manufacturing. Advances in Virtual Factory Research and Applications, The State of Art, The Virtual Factory Software , Limitations of the Commercial Software	**07 Hrs**
Unit –V	
Augmented Reality: The Role of Augmented Reality in the Age of Industry 4.0, Introduction, AR Hardware and Software Technology, Industrial Applications of AR, Maintenance , Assembly, Collaborative Operations , Training.	**07 Hrs**

Smart Factories: Introduction, Smart factories in action, Importance, Real world smart factories, The way forward. A Roadmap: Digital Transformation, Transforming Operational Processes, Business Models, Increase Operational Efficiency, Develop New Business Models.	

Course Outcomes: After going through this course the student will be able to:	
CO 1	Understand the opportunities, challenges brought about by Industry 4.0 for benefits of organizations and individuals
CO 2	Analyze the effectiveness of Smart Factories, Smart cities, Smart products and Smart services
CO 3	Apply the Industrial 4.0 concepts in a manufacturing plant to improve productivity and profits
CO 4	Evaluate the effectiveness of Cloud Computing in a networked economy

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) solving innovative problems 2) seminar/new developments in the related course 3) Laboratory/field work 4) mini project. **Total CIE is 20+50+30=100 Marks.**

Scheme of Semester End Examination (SEE) for 100 marks:

The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Semester: II						
ADVANCED MATERIALS (Group G: Global Elective)						
Course Code	**:**	**18ME2G07**		**CIE Marks**	**:**	**100**
Credits L: T: P	**:**	**3:0:0**		**SEE Marks**	**:**	**100**
Hours	**:**	**36L**		**SEE Duration**	**:**	**3 hrs**

Unit – I	
Classification and Selection of Materials: Classification of materials. Properties required in Engineering materials, Criteria of selection of materials. Requirements / needs of advance materials.	**07 Hrs**
Unit – II	
Non Metallic Materials: Classification of n on metallic materials, Rubber : Properties, processing and applications.Plastics : Thermosetting and Thermoplastics, Applications and properties. Ceramics : Properties and applications. Adhesives: Properties and applications. Optical fibers : Properties and applications. Composites : Properties and applications.	**07 Hrs**
Unit – III	
High Strength Materials: Methods of strengthening of alloys, Materials available for high strength applications, Properties required for high strength materials, Applications of high strength materials	**08 Hrs**
Unit – IV	
Low & High Temperature Materials Properties required for low temperature applications, Materials available for low temperature applications, Requirements of materials for high temperature applications, Materials available for high temperature applications, Applications of low and high temperature materials.	**07 Hrs**
Unit –V	
Nanomaterials: Definition, Types of nanomaterials including carbon nanotubes and nanocomposites, Physical and mechanical properties, Applications of nanomaterials	**07 Hrs**

Course Outcomes: After going through this course the student will be able to:	
CO 1	Describe metallic and non metallic materials
CO 2	Explain preparation of high strength Materials
CO 3	Integrate knowledge of different types of advanced engineering Materials
CO 4	Analyse problem and find appropriate solution for use of materials.

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks)
CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) solving innovative problems 2) seminar/new developments in the related course 3) Laboratory/field work 4) mini project. **Total CIE is 20+50+30=100 Marks.**

Scheme of Semester End Examination (SEE) for 100 marks:
The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Semester: II		
COMPOSITE MATERIALS SCIENCE AND ENGINEERING (Common to AS, BT, CH, CV, IM, ME)		
Course Code: 18CHY2G08		**CIE Marks: 100**
Credits: L:T:P :: 3:0:0		**SEE Marks: 100**
Hours: 36L		**SEE Duration: 3Hrs**

Course Learning Objectives:	
1	Understand the properties of composite materials.
2	Apply the basic concepts of Chemistry to develop futuristic composite materials for high-tech applications in the area of Engineering.
3	Impart knowledge in the different fields of material chemistry so as to apply it to the problems in engineering field.
4	Develop analytical capabilities of students so that they can characterize, transform and use materials in engineering and apply knowledge gained in solving related engineering problems.

Unit-I	
Introduction to composite materials Fundamentals of composites – need for composites – Enhancement of properties – Classification based on matrix- Polymer matrix composites (PMC), Metal matrix composites (MMC), Ceramic matrix composites (CMC) – Constituents of composites, Interfaces and Interphases, Distribution of constituents, Types of Reinforcements, Particle reinforced composites, Fibre reinforced composites. Fiber production techniques for glass, carbon and ceramic fibers Applications of various types of composites.	**07 Hrs**
Unit – II	
Polymer matrix composites (PMC) Polymer resins – Thermosetting resins, Thermoplastic resins & Elastomers, Reinforcement fibres-Types, Rovings, Woven fabrics. PMC processes – Hand Layup Processes, Spray up processes – Compression Moulding – Injection Moulding – Resin Transfer Moulding – Pultrusion – Filament winding – Injection moulding. Glass fibre and carbon fibre reinforced composites (GFRP & CFRP). Laminates- Balanced Laminates, Symmetric Laminates, Angle Ply Laminates, Cross Ply Laminates. Mechanical Testing of PMC- Tensile Strength, Flexural Strength, ILSS, Impact Strength- As per ASTM Standard. Applications of PMC in aerospace, automotive industries**.**	**08 Hrs**
Unit -III	
Ceramic matrix composites and special composites Engineering ceramic materials – properties – advantages – limitations – monolithic ceramics – need for CMC – ceramic matrix – various types of ceramic matrix composites-oxide ceramics – non oxide ceramics – Aluminium oxide – silicon nitride – reinforcements – particles- fibres- whiskers. Sintering – Hot pressing – Cold Isostatic Pressing (CIPing) – Hot isostatic pressing (HIPing). Applications of CMC in aerospace, automotive industries-Carbon /carbon composites – advantages of carbon matrix – limitations of carbon matrix carbon fibre – chemical vapour deposition of carbon on carbon fibre perform. Sol-gel technique- Processing of Ceramic Matrix composites.	**07 Hrs**
Unit –IV	
Metal matrix composites Characteristics of MMC, various types of metal matrix composites alloy vs. MMC, advantages of MMC, limitations of MMC, Reinforcements – particles – fibres. Effect of reinforcement – volume fraction – rule of mixtures. Processing of MMC – powder metallurgy process – diffusion bonding – stir casting – squeeze casting, a spray process, Liquid infiltration In-situ reactions-Interface-measurement of interface properties-	**07 Hrs**

applications of MMC in aerospace, automotive industries.	
Unit –V	
Polymer nano composites Introduction and Significance of polymer Nano composites. Intercalated And Exfoliated Nanocomposites. Classification of Nano fillers- nanolayers, nanotubes, nanoparticles. Preparation of Polymer Nano composites by Solution, In-situ Polymerization and melt mixing techniques. Characterization Of polymer nanocomposites- XRD, TEM, SEM and AFM. Mechanical and Rheological properties of Polymer Nano composites. Gas barrier, Chemical-Resistance, Thermal and Flame retardant properties of polymer nanocomposites. Optical properties and Biodegradability studies of Polymer nanocomposites, Applications of polymer nano-composites.	**07 Hrs**

Course Outcomes: After completing the course, the students will be able to	
CO1 :	Understand the purpose and the ways to develop new materials upon proper combination of known materials.
CO2 :	Identify the basic constituents of a composite materials and list the choice of materials available
CO3 :	Will be capable of comparing/evaluating the relative merits of using alternatives for important engineering and other applications.
CO4 :	Get insight to the possibility of replacing the existing macro materials with nano-materials.

The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Semester : II		
PHYSICS OF MATERIALS (Group G: Global Elective)		
Course Code: 18PHY2G09		**CIE Marks: 100**
Credits: L:T:P:: 3:0:0		**SEE Marks: 100**
Hours: 36		**SEE Duration: 3Hrs**

Course Learning Objectives (CLO):
Student are able to 1.Classify the crystals based on lattice parameters. 2.Explain the behavior of Dielectrics with change in frequency. 3.Classify the magnetic materials based on Quantum theory as well understand superconductors. 4.Explain direct and indirect bandgap semiconductors, polymer semiconductors and Photoconductive polymers. 5.Describe the behavior of Smart materials and its phases and apply to Engineering applications.

Unit-I	**07 Hrs**
Crystal Structure : Symmetry elements-seven crystals systems-Reciprocal lattice-Packing fraction, Lattice Vibration-Brillouin zones, Analysis of Crystal structure using XRD, Thermal properties.	
Unit-II	**07 Hrs**
Dielectric Materials: Basic concepts-Langevin's Theory of Polarisation-Clausius-Mossotti Relation-Ferro electricity-Piezoelectricity-Properties of Dielectric in alternating fields-The complex Dielectric Constant and Dielectric Loss, Polarizability as a function of frequency-Complex dielectric constant of non-polar solids-Dipolar relaxation, Applications.	
Unit -III	**07Hrs**
Magnetic Materials : Dia and Paramagnetic materials-Quantum theory of paramagnetic materials-Paramagnetic susceptibility of conduction electrons-Ferro-anti ferromagnetic materials-Superconductors and Applications..	
Unit -IV	**07 Hrs**
Semiconducting Materials Semiconductor-Direct and Indirect bonding characteristics-Importance of Quantum confinement-quantum wires and dots-Ferro electric semiconductors-applications-Polymer semiconductors-Photo conductive polymers, Applications.	
Unit -V	**08 Hrs**
Novel Materials Smart materials-shape memory alloys-shape memory effects-Martensitia Transformation functional properties-processing-texture and its nature.

2.	Introduction to Solid State Physics, C.Kittel, 7th Edition, 2003, John Wiley & Sons, ISBN 9971-51-180.
3	Material Science, Rajendran V and Marikani, 1st Edition, Tata McGraw Hill, ISBN 10-0071328971.

.	
4.	The Science and Engineering of Materials, Askeland, Fulay, Wright, Balanai, 6th Edition, Cengage Learning, ISBN-13:978-0-495-66802-2.

Course Outcomes (CO's):

CO1: Analyse crystals using XRD technique.
CO2: Explain Dielectric and magnetic materials.
CO3:Integrate knowledge of various types of advanced engineering Materials.
CO4: Use materials for novel applications.

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks):
CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. Total CIE is 20+50+30 = 100 marks.

Scheme of Semester End Examination (SEE) for 100 marks:
The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

II Semester		
ADVANCED STATISTICAL METHODS (Global Elective)		
Course Code: 18MAT2G10		**CIE Marks: 100**
Credits: L:T:P:: 3:0:0		**SEE Marks: 100**
Hours: 36		**SEE Duration: 3Hrs**

Course Learning Objectives (CLO):
Students are able to: 1. Adequate exposure to learn sampling techniques, random phenomena for analyzing data for solving real world problems. 2. To learn fundamentals of estimation and problems used in various fields of engineering and science. 3. Explore the fundamental principles of statistical inference and tests of hypothesis. 4. Apply the concepts of regression and statistical models to solve the problems of engineering applications.

Unit-I	**07 Hrs**
Sampling Techniques: Random numbers, Concepts of random sampling from finite and infinite populations, Simple random sampling (with replacement and without replacement). Expectation and standard error of sample mean and proportion.	
Unit-II	**07 Hrs**
Estimation: Point estimation, Estimator and estimate, Criteria for good estimates - unbiasedness, consistency, efficiency and sufficiency, Method of moment's estimation and maximum likelihood estimation, Properties of maximum likelihood estimator (no proofs), Confidence intervals-population mean (large sample), population proportion.	
Unit -III	**07Hrs**
Tests of Hypothesis: Principles of Statistical Inference, Formulation of the problems with examples, Simple and composite hypothesis, Null and alternative hypothesis, Tests - type I and type II error, Testing of mean and variance of normal population (one sample and two samples), Chi squared test for goodness of fit.	
Unit -IV	**07 Hrs**
Linear Statistical Models: Definition of linear model and types, One way ANOVA and two way ANOVA models-one observation per cell, multiple but equal number of observation per cell.	
Unit -V	**08 Hrs**
Linear Regression: Simple linear regression, Estimation of parameters, Properties of least square estimators, Estimation of error variance, Multivariate data, Multiple linear regressions, Multiple and partial correlation, Autocorrelation-introduction and plausibility of serial dependence, sources of autocorrelation, Durbin-Watson test for auto correlated variables.

4	Regression Analysis: Concepts and Applications , F. A. Graybill and H. K. Iyer, Belmont, Calif, 1994, Duxbury Press, ISBN-13: 978-0534198695.

Course outcomes (CO's):
On completion of the course, the student should have acquired the ability to CO1: Identify and interpret the fundamental concepts of sampling techniques, estimates and types, hypothesis, linear statistical models and linear regression arising in various fields engineering. CO2: Apply the knowledge and skills of simple random sampling, estimation, null and alternative hypotheses, errors, one way ANOVA, linear and multiple linear regressions. CO3: Analyze the physical problem to establish statistical/mathematical model and use appropriate statistical methods to solve and optimize the solution. CO4: Distinguish the overall mathematical knowledge gained to demonstrate the problems of sampling techniques, estimation, tests of hypothesis, regression and statistical model arising in many practical situations.

Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks):
CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) Solving innovative problems 2) Seminar/new developments in the related course 3) Laboratory/ field work 4) mini project.
Total CIE is 20+50+30 = 100 marks.

Scheme of Semester End Examination (SEE) for 100 marks:
The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.
