Approved by AICTE,
New Delhi

Go, Change the world®

Scheme and Syllabus of I – IV semester
(Autonomous System of 2022 Scheme)

Master of Technology (M. Tech.)
in
SOFTWARE ENGINEERING (MSE)

**DEPARTMENT OF
INFORMATION
SCIENCE &
ENGINEERING**

Academic Year 2022-23

Estd.1963

Go, change the world

RV COLLEGE OF ENGINEERING

(An Autonomous Institution Affiliated to VTU, Belagavi)
RV Vidyaniketan Post, 8th Mile, Mysuru Road, Bengaluru - 560 059.

2022
Ranked
89th in
Engineering
Category

One of the most preferred Technical Institutions

Accredited
by
NBA

PROGRAMS OFFERED

B.E. Programs : AI, AS, BT, CH, CS, CV, CD, CY, EC, EE, EI, ET, IM, IS, ME.

M. Tech (13) MCA, M.Sc. (Engg.)

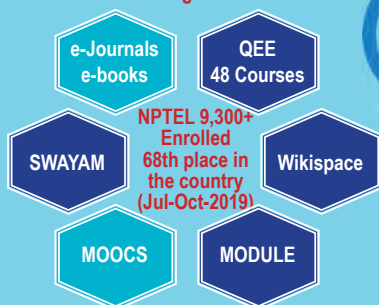

Ph.D. Programs : All Departments are recognized as
Research Centres by VTU Except AI & AS

Five RVCE Alumni
cleared Civil Services
Exam in 2020-21

Ranked in top 10 Pvt.
College in the Country
by various magazines

Ranked 3rd in Sports
& Cultural Activities
under VTU (2019-20)

Use of ICT in Teaching
Learning Process

Holistic development of students through NCC, NSS Cultural activities, Community service & Sports.

16 Centres of Excellences
07 Centres of Competence

MoUs: 90+with
Industries / Academic
Institutions in India &
abroad

Executed more than Rs. 40
crores worth sponsored
research projects &
consultancy works
since 3 years

UPSC Results (2020): RVCE-Alumni

Name : Kushal Jain
Rank : 40
ISE-2016 Pass out

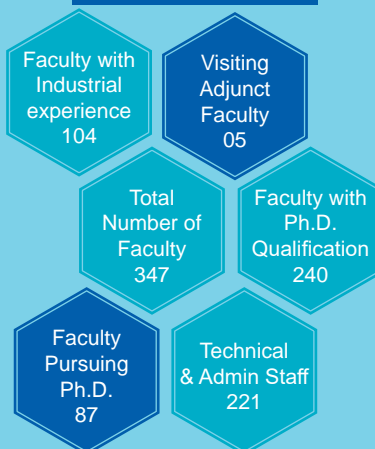

Name : Naveen Kumar
Rank : 62
ME - Pass out

Name : Deepak R. Shet
Rank : 311
ECE – 2013 Pass out

Human Resource

RVCE - Greaves Cotton Ltd Centre of excellence in e-mobility

DEPARTMENT OF INFORMATION SCIENCE & ENGINEERING

VISION

To be the hub for innovation in Information Science & Engineering through Teaching, Research, Development and Consultancy; thus make the department a global resource center in advanced, sustainable and inclusive

MISSION

1. To enable students to become responsible professionals, strong in fundamentals of information science and engineering through experiential learning
 2. To bring research and entrepreneurship into classrooms by continuous design of innovative solutions through research publications and dynamic development-oriented curriculum.
 3. To facilitate continuous interaction with the outside world through student internship, faculty consultancy, workshops, faculty development programs, industry collaboration and association with the professional societies.
 4. To create a new generation of entrepreneurial problem solvers for a sustainable future through green technology with an emphasis on ethical practices, inclusive societal concerns, and environment
1. To promote teamwork through interdisciplinary projects, co-curricular and social activities.

PROGRAMME OUTCOMES (PO)

M. Tech in **Software Engineering** graduates will be able to:

- PO1: An ability to independently carry out research /investigation and development work to solve practical problems.
- PO2: An ability to write and present a substantial technical report/document.
- PO3: An ability to develop software in various domains in a systematic way by applying Analytical and Programming skills leading to practical solutions.
- PO4: Design, develop and deliver complex, scalable, and cost-effective software systems by applying Software Engineering principles, tools and processes.
- PO5: Demonstrate with responsibilities and capabilities of professional software engineer with importance to quality and management issues involved in software construction.
- PO6: Demonstrated capability to take up higher studies, Entrepreneurships and self-driven career development in the chosen area of interest.

INDEX

Sl. No.	Course Code	Course Title	Page No.
1	22MAT11CT	Linear Algebra and Probability Theory	09 – 10

SEMESTER: I					
Course Code	: 22MAT11CT	LINEAR ALGEBRA AND PROBABILITY THEORY	CIE Marks	:	100
Credits L-T-P	: 3-1-0		SEE Marks	:	100
Hours	: 42L+28T	Common Course (MDC, MIT, MSE)	SEE Durations	:	3 Hrs
Faculty Coordinator:		Dr. Sowmya M			
UNIT - I					9 Hrs
Matrices and Vector spaces: Geometry of system of linear equations, vector spaces and subspaces, linear independence, basis and dimension, four fundamental subspaces, change of basis. Rank-nullity theorem (without proof), linear transformations, representation of transformations by matrices.					
UNIT - II					9 Hrs
Orthogonality and least square approximations: Inner product, orthogonal vectors, orthogonal projections, orthogonal bases, Fourier expansion. Eigen subspaces, Gram-Schmidt orthogonalization process. QR factorisation, least square problems, application to linear models (least square lines and least square fitting of other curves).					
UNIT - III					8 Hrs
Symmetric and Quadratic forms: Quadratic forms, constrained optimization, symmetric forms, diagonalization, singular value decomposition, mean and covariance matrix, principal component analysis.					
UNIT - IV					8 Hrs
Multiple Random variables: Joint probability mass functions and probability density functions, marginal density function, conditioning of random variables, statistical independence, correlation and covariance functions, covariance and correlation matrices, transformation of random variables, Markov and Chebyshev inequalities, Gaussian distribution-Multivariate normal density and its properties.					
UNIT - V					8 Hrs
Random Processes: Introduction, classification of random processes, stationary and independence, auto correlation function and properties, cross correlation, cross covariance functions. Markov processes, transition and state probability in Markov chain, ergodic processes and ergodicity.					
Course Outcomes: After going through this course the student will be able to:					
CO1	:	Illustrate the fundamental concepts of vector spaces, orthogonality, joint probability distributions and random process arising in various fields engineering.			
CO2	:	Derive the solution by applying the acquired knowledge and skills of linear algebra/probability/optimization techniques to solve problems of probability distributions, linear algebra and random process.			
CO3	:	Evaluate the solution of the problems using appropriate linear algebra, statistical and random process techniques to the real world problems arising in many practical situations.			
CO4	:	Compile the overall knowledge of multivariate probability distributions, linear algebra and random process methods gained to engage in life – long learning.

Scheme of Continuous Internal Evaluation (CIE): 20 + 40 + 40 = 100

QUIZZES: Quizzes will be conducted in online/offline mode. Two quizzes will be conducted & Each Quiz will be evaluated for 10 Marks. The sum of two quizzes will be the Final Quiz marks.

TESTS: Students will be evaluated in test, descriptive questions with different complexity levels (Revised Bloom's Taxonomy Levels: Remembering, Understanding, Applying, Analyzing, Evaluating, and Creating). Two tests will be conducted. Each test will be evaluated for 50 Marks, adding upto 100 Marks. Final test marks will be reduced to 40 Marks.

EXPERIENTIAL LEARNING: Students will be evaluated for their creativity and practical implementation of the problem. Case study-based teaching learning and Program specific requirements (15), Video based seminar/presentation/demonstration (25) adding upto 40 marks.

Scheme of Semester End Examination (SEE) for 100 marks: The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Rubric for CIE & SEE Theory courses

			5 & 6	Unit-3: Question 5 or 6	20
			7 & 8	Unit-4: Question 7 or 8	20
			9 & 10	Unit-5: Question 9 or 10	20
				Total Marks	100

SEMESTER: I				
Course Code	: 22MSE12TL	DATA STRUCTURES AND ALGORITHMS	CIE Marks	: 100
Credits L-T-P	: 3-0-1	(Theory & Practice)	SEE Marks	: 100
Hours	: 42L + 28P	(Professional Core - 1)	SEE Durations	: 3 Hrs
Faculty Coordinator:		Dr. B M Sagar, Dr.Ashwini K B		
UNIT - I				9 Hrs
Review of Analysis Techniques: Growth of Functions: Asymptotic notations; Standard notations and common functions; Recurrences and Solution of Recurrence equations- The substitution method, The recurrence – tree method, The master method				
UNIT - II				9 Hrs
Graph Algorithms: Bellman - Ford Algorithm; Single source shortest paths in a DAG; Johnson’s Algorithm for sparse graphs; Flow networks and Ford-Fulkerson method; Maximum bipartite matching. Polynomials and the FFT: Representation of polynomials; The DFT and FFT; Efficient implementation of FFT, A*Search				
UNIT - III				8 Hrs
Trees: 2-3- tree, 2-3-4 tree, Augmenting Data Structures. Heaps: Binary Heap, Priority Queues: Leftist Heap, Skew Heap, Binomial Heap, Fibonacci Heap.				
UNIT - IV				8 Hrs
Number -Theoretic Algorithms: Elementary notions; GCD; Modular Arithmetic; Solving modular linear equations; The Chinese remainder theorem; Powers of an element; RSA cryptosystem; Primality testing; Integer factorization				
UNIT - V				8 Hrs
String-Matching Algorithms: Naïve string Matching; Rabin - Karp algorithm; String matching with finite automata; Knuth-Morris-Pratt algorithm; Boyer – Moore algorithms.				
LABORATORY				28 Hrs
Laboratory Programs The following programs will be executed on Java/C/C++/Python any equivalent tool/language by adapting exception handling technique wherever it is suitable Part-A 1. Design, develop, and write a program to implement insertion and search operation in a 2-3-4 tree. Determine its complexity. 2. Design, develop, and write a program to implement Fibonacci Heap/ Binomial Heap 3. Design, develop, and write a program to find the shortest path between source and destination using A* search 4. Design and implement RSA public key to decrypt ciphertext 5. Design, develop, and write a program to implement to solve string matching problem using naive approach and the Rabin Karp algorithm and compare their complexity. Part-B Design and Implement Realtime applications using the available data structures				
Course Outcomes: After going through this course the student will be able to:				
CO1	:	Understand the fundamentals of different Data Structures and Algorithms		
CO2	:	Apply data structures and algorithms with an emphasis on persistence.		
CO3	:	Analyze the impact of Data Structures and algorithms for better performance		
CO4	:	Design and implement efficient solutions to real world problems

Scheme of Continuous Internal Evaluation (CIE): 20 + 40 + 40 = 100 QUIZZES: Quizzes will be conducted in online/offline mode. Two quizzes will be conducted & Each Quiz will be evaluated for 10 Marks. The sum of two quizzes will be the Final Quiz marks. TESTS: Students will be evaluated in test, descriptive questions with different complexity levels (Revised Bloom’s Taxonomy Levels: Remembering, Understanding, Applying, Analyzing, Evaluating, and Creating). Two tests will be conducted. Each test will be evaluated for 50 Marks, adding upto 100 Marks. Final test marks will be reduced to 40 Marks. EXPERIENTIAL LEARNING: Students will be evaluated for their creativity and practical implementation of the problem. Case study-based teaching learning and Program specific requirements (15), Video based seminar/presentation/demonstration (25) adding upto 40 marks.					

Scheme of Semester End Examination (SEE) for 100 marks: The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

SEMESTER: I				
Course Code	: 22MSE14L	Software Application Development Lab (Coding / Skill Laboratory)	CIE Marks	: 50
Credits L-T-P	: 1 - 0 - 1		SEE Marks	: 50
Hours	: 14L+28P		SEE Durations	: 3 Hrs
Faculty Coordinator:		Dr.Mamatha G S, Dr.Kavitha S N		
Content				
Prerequisites: Fundamentals of HTML and CSS, JavaScript, MongoDB, Angularjs, Nodejs, Expressjs with basic knowledge of routing and http methods .				
Objective: The course aims on enhancing skills required for full-stack solution for JavaScript development using MongoDB, Express.js, AngularJS, and Node.js Syllabus: MEAN, a free, open-source, full-stack solution for MEAN applications. MEAN combines MongoDB, Express.js, AngularJS, and Node.js into a single, full-stack solution for JavaScript development. This lab focuses on development techniques of every layer in the MEAN stack, using any simple application project that has a Backend server side Api built with Node , Express and MongoDB and a Frontend client built with angular 6 that will exchange with the backend Api. Data will be exchanged between a browser based client and an API backend service . Learnings:				
<ul style="list-style-type: none">• Installing and setting up the MEAN development environment• Configuring Angular Component with a form to add new items and also to edit existing items• Creating http methods• Connect Angular Frontend to a NodeJS & Express & MongoDB Backend• Installing and working with MongoDB and Node.js				
Course Outcomes:				
After going through this course the student will be able to:				
CO1	:	Comprehend the concepts of angular JS elements and components.		
CO2	:	Apply knowledge of hooks, events, state managements and routing in web and mobile application development.		
CO3	:	Design and develop routing process with http methods.		
CO4	:	Develop and test applications using specific tools.

Scheme of Continuous Internal Evaluation (CIE- Laboratory) : Only LAB Course 30 + 10 + 10 = 50. The Laboratory session is held every week as per the timetable and the performance of the student is evaluated in every session. The average of marks over number of experiments conducted over the weeks is considered for 30 Marks i.e (Lab Report, Observation & Analysis). The students are encouraged to implement additional innovative experiments in the lab (10 marks). At the end of the semester a test is conducted for 10 Marks (Lab Test). This adds to 50 Marks.				
Scheme of Semester End Examination (SEE- Laboratory) : Only LAB Course 40 + 10 =50. Students will be evaluated for Write-up, Experimental Setup, Experiment Conduction with Results, Analysis & Discussions for 40 Marks and Viva will be conducted for 10 Marks adding to 50 Marks.				

Only LAB Courses with 50 Marks

UNIT - I					9 Hrs
Introduction: Intelligent agents, searching: Basics of AI, Intelligent Agents: Agents and environment; Rationality; the nature of environments; the structure of agents. Problem-solving: Problem-solving agents; Searching for solution; Uninformed search strategies; Informed search strategies, Heuristic Functions					
UNIT - II					9 Hrs
Adversarial search, constraint satisfaction problems, logical agents: Games, Optimal decision in games, Alpha-Beta Pruning, Defining Constraint satisfaction problems; Backtracking search for CSPs; Knowledge-based agents					
Probabilistic reasoning: Representing knowledge in an uncertain domain; Semantics of Bayesian Networks; Efficient representation of conditional distributions; Exact inference in Bayesian Networks; Approximate inference in Bayesian Networks					
UNIT - III					8 Hrs
Introduction, Concept Learning and Decision Trees Learning Problems – Designing Learning systems, Perspectives and Issues – Concept Learning –Version Spaces and Candidate Elimination Algorithm – Inductive bias – Decision Tree learning– Representation – Algorithm – Heuristic Space Search.					
UNIT - IV					8 Hrs
Bayesian And Computational Learning Bayes Theorem – Concept Learning – Maximum Likelihood – Minimum Description Length Principle – Bayes Optimal Classifier – Gibbs Algorithm – Naïve Bayes Classifier – Bayesian Belief Network – EM Algorithm – Probably Learning – Sample Complexity for Finite and Infinite Hypothesis Spaces – Mistake Bound Model					
UNIT - V					8 Hrs
Instant Based Learning K- Nearest Neighbor Learning, Locally Weighted Regression, Radial Basis Functions, Case-Based Reasoning Reinforcement Learning: The Learning Task, Q-Learning, Temporal Difference Learning					
Course Outcomes: After going through this course the student will be able to:					
CO1	:	Explore the fundamentals of Artificial intelligence technology and Machine learning algorithms			
CO2	:	Apply the working of various searching algorithms, games, pruning, inferencing, etc. with suitable examples.			
CO3	:	Analyze and determine appropriate algorithms and techniques for AI and ML applications.			
CO4	:	Evaluate AI and ML based solutions for classical problems.

UNIT - I					9 Hrs
Essentials For Mobile Application Development :					
Background about mobile technologies, Overview of Android, Android architecture, Android for mobile application development, Android development Framework – Android SDK, Emulators / Android AVD Android Project Framework , Setting up development environment, Running android app, Dalvik Virtual Machine & .apk file extension, android debug bridge. Fundamentals: Basic Building blocks - Activities, Services, Broadcast Receivers & Content providers, UI Components - Views & notifications, Components for communication -Intents & Intent Filters, Android API levels (versions & version names)					
UNIT - II					9 Hrs
Android UI Architecture & UI Widgets :					
Application context, Intents, Activity life cycle, Supporting different devices, multiple screen sizes, Fundamental Android UI design – Layouts, Drawable resources, UI widgets, Notification, Toasts, Menu, Dialogs, Lists & Adapters, Building dynamic UI with fragments.					
UNIT - III					8 Hrs
Data Storage, Services & Content Providers :					
Saving Data, Interacting with other Applications, Working with system permissions, Applications with content sharing, Shared Preferences, Preferences activity, Files access, SQLite database, Threads, Overview of services in Android, Implementing a Service, Service lifecycle, Inter Process Communication.					
UNIT - IV					8 Hrs
Advanced Android :					
Building apps with Multimedia, Building apps with Graphics & Animations, Building apps with Location Based Services and Google maps, Building apps with Connectivity & Cloud, Sensors, Bluetooth, Camera, Telephony Services.					
UNIT - V					8 Hrs
Testing, Debugging & Deployment of Android Application :					
Role and use of Dalvik Debug Monitor Server (DDMS), adb tool, How to debug Android application, Use of Step Filters, Breakpoints, Suspend and Resume, How to use LogCat, Preparing for publishing – Signing & Versioning of apps, Using Google Play to distribute & Monetize, Best practices for security & privacy.					
Course Outcomes:					
After going through this course the student will be able to:					
CO1	:	Comprehend the basic features of Android Platform and the Application Development Process. Acquire familiarity with basic building blocks of Android Application and its architecture.			
CO2	:	Apply and explore the basic framework, usage of SDK to build apps incorporating Android features in developing mobile applications.			
CO3	:	Demonstrate proficiency in coding on a mobile programming platform using advanced Android technologies like multimedia, involving the sensors and hardware features of the phone.			
CO4	:	Demonstrate proficiency in testing, debugging and deployment of Android applications.

UNIT - I					9 Hrs
Introduction: Introduction: Quality: Popular views; Quality: Professional views; Software quality; Total quality management. Overview of Software Quality Metrics: Product quality metrics; In-process quality metrics; Metrics for software maintenance; Examples of metrics programs; Collecting software engineering data.					
UNIT - II					9 Hrs
Applying the 7 Basic Quality Tools in Software Development: Ishikawa's seven basic tools; Checklist; Pareto diagram; Histogram; Run charts; Scatter diagram; Control chart; Cause-and-effect diagram; Relations diagram. Defect Removal Effectiveness: Review; A closer look at defect removal effectiveness; Defect removal effectiveness and quality planning; Cost effectiveness of phase defect removal; Defect removal effectiveness and process maturity level.					
UNIT - III					8 Hrs
The Rayleigh Model: Reliability models; The Rayleigh model; Basic assumptions; Reliability and predictive validity. Exponential Distribution and Reliability Growth Models: The exponential model; Reliability growth models; Model assumptions; Criteria for model evaluation; Modeling process; Test compression factor; Estimating the distribution of total defects over time.					
UNIT - IV					8 Hrs
Quality Management Models: The Rayleigh model framework; The code integration pattern; The PTR submodel; The PTR arrival / backlog projection model; Reliability growth models; Criteria for model evaluation; In-process metrics and reports; Orthogonal defect classification. In-Process Metrics for Software Testing: In-process metrics for software testing; In-process metrics and quality management; Possible metrics for acceptance testing to evaluate vendor-developed software; When is the product good enough to ship?					
UNIT - V					8 Hrs
Metrics and Lessons Learned for Object-Oriented Projects: Object-oriented concepts and constructs; Design and complexity metrics; Productivity metrics; Quality and quality management metrics; Lessons learned for OO projects. Availability Metrics: Definition and measurements of system availability; Reliability, availability, and defect rate; Collecting customer outage data for quality improvement; In-process metrics for outage and availability.					
Course Outcomes: After going through this course the student will be able to:					
CO1	:	Comprehend the need for measurement of software artefacts.			
CO2	:	Apply various software quality metrics in process of software development			
CO3	:	Design and analyse various models for software management.			
CO4	:	Compare and evaluate metrics and various models for assuring software quality.

Faculty Coordinator:		Dr. G S Mamatha			
UNIT - I					9 Hrs
Usability of Interactive Systems: Introduction, Usability goals and Measures, Usability Motivations, Universal Usability, Goals for Our Profession; Guidelines, Principles, and Theories: Introduction, Guidelines, Principles, Theories.					
UNIT - II					9 Hrs
Managing Design Processes: Introduction, Organizational Design to Support Usability, The Four Pillars of Design, Development Methodologies, Ethnographic Observation, Participatory Design, Scenario Development, Social Impact Statement for Early Design Review, Legal Issues. Evaluating Interface Designs: Introduction, Expert Reviews, Usability Testing and Laboratories, Survey Instruments, Acceptance Tests, Evaluation During Active Use Controlled Psychologically Oriented Experiments.					
UNIT - III					8 Hrs
Direct Manipulation and Virtual Environment : Introduction Examples of Direct Manipulation, Discussion of Direct Manipulation, 3D Interfaces Teleoperation, Virtual and Augmented Reality. Menu Selection, Form Fill-in, and Dialog Boxes: Introduction, Task-Related Menu Organization, Single Menus, Combinations of Multiple Menus, Content Organization Fast Movement through Menus, Data Entry with Menus: Form Fill-in, Dialog Boxes and Alternatives, Audio Menus and Menus for Small Displays.					
UNIT - IV					8 Hrs
Collaboration and Social Media Participation : Introduction, Goals of Collaboration and Participation, Asynchronous Distributed Interfaces: Different Place, Different Time Synchronous Distributed Interfaces: Different Place, Same Time, Face-to-Face Interfaces: Same Place, Same Time. Quality of Service: Introduction, Models of Response Time Impacts Expectations and Attitudes, User Productivity, Variability in Response Time, Frustrating Experiences.					
UNIT - V					8 Hrs
Mobile HCI: Mobile Ecosystem: Platforms, Application frameworks- Types of Mobile Applications: Widgets, Applications, Games- Mobile Information Architecture, Mobile 2.0, Mobile Design: Elements of Mobile Design, Tools. Web Interface Design : Designing Web Interfaces – Drag & Drop, Direct Selection, Contextual Tools, Overlays, Inlays and Virtual Pages, Process Flow. Case Studies					
Course Outcomes: After going through this course the student will be able to:					
CO1	:	Demonstrate Understanding of fundamental design and evaluation methodologies of computer Interaction between the human and computer components.			
CO2	:	Apply and analyse HCI design principles and guidelines in the software process.			
CO3	:	Compare and Implement Interaction design rules.			
CO4	:	Enumerate the cognitive computerized models and HCI implication for designing multimedia, e-learning web sites.

2. The essential guide to user interface design, Wilbert O Galitz, 3rd Edition , Wiley, 2007, ISBN: 978-0-471-27139-0.					
3. Mobile Design and Development, Brian Fling, First Edition , O'Reilly Media Inc., 2009 (UNIT –V)					
4. Designing Web Interfaces, Bill Scott and Theresa Neil, First Edition, O'Reilly, 2009.(UNIT-V).					

Scheme of Continuous Internal Evaluation (CIE): 20 + 40 + 40 = 100

QUIZZES: Quizzes will be conducted in online/offline mode. Two quizzes will be conducted & Each Quiz will be evaluated for 10 Marks. The sum of two quizzes will be the Final Quiz marks.

TESTS: Students will be evaluated in test, descriptive questions with different complexity levels (Revised Bloom's Taxonomy Levels: Remembering, Understanding, Applying, Analyzing, Evaluating, and Creating). Two tests will be conducted. Each test will be evaluated for 50 Marks, adding upto 100 Marks. Final test marks will be reduced to 40 Marks.

EXPERIENTIAL LEARNING: Students will be evaluated for their creativity and practical implementation of the problem. Case study-based teaching learning and Program specific requirements (15), Video based seminar/presentation/demonstration (25) adding upto 40 marks.

Scheme of Semester End Examination (SEE) for 100 marks: The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Hours	:	42L		<i>Elective B (Professional Elective)</i>	SEE Durations	:
Faculty Coordinator:		Prof. B K Srinivas				
UNIT - I					9 Hrs	
What is IoT, Genesis of IoT, IoT and Digitization, IoT Impact, Convergence of IT and IoT, IoT Challenges, IoT Network Architecture and Design, Drivers Behind New Network Architectures, Comparing IoT Architectures, A Simplified IoT Architecture, The Core IoT Functional Stack, IoT Data Management and Compute Stack.						
UNIT - II					9 Hrs	
Smart Objects: The “Things” in IoT, Sensors, Actuators, and Smart Objects, Sensor Networks, Connecting Smart Objects, Communications Criteria, IoT Access Technologies.						
UNIT - III					8 Hrs	
IP as the IoT Network Layer, The Business Case for IP, The need for Optimization, Optimizing IP for IoT, Profiles and Compliances, Application Protocols for IoT, The Transport Layer, IoT Application Transport Methods.						
UNIT - IV					8 Hrs	
Data and Analytics for IoT, An Introduction to Data Analytics for IoT, Machine Learning, Big Data Analytics Tools and Technology, Edge Streaming Analytics, Network Analytics, Securing IoT, A Brief History of OT Security, Common Challenges in OT Security, How IT and OT Security Practices and Systems Vary, Formal Risk Analysis Structures: OCTAVE and FAIR, The Phased Application of Security in an Operational Environment						
UNIT - V					8 Hrs	
IoT Physical Devices and Endpoints : Arduino UNO: Introduction to Arduino, Arduino UNO, Installing the Software, Fundamentals of Arduino Programming. IoT Physical Devices and Endpoints - RaspberryPi: Introduction to RaspberryPi, About the RaspberryPi Board: Hardware Layout, Operating Systems on RaspberryPi, Configuring RaspberryPi, Programming RaspberryPi with Python, Wireless Temperature Monitoring System Using Pi, DS18B20 Temperature Sensor, Connecting Raspberry Pi via SSH, Accessing Temperature from DS18B20 sensors, Remote access to RaspberryPi, Smart and Connected Cities, An IoT Strategy for Smarter Cities, Smart City IoT Architecture, Smart City Security Architecture, Smart City Use-Case Examples.						
Course Outcomes: After going through this course the student will be able to:						
CO1	:	Compare and contrast the deployment of smart objects and the technologies to connect them to network.				
CO2	:	Appraise the role of IoT protocols for efficient network communication.				
CO3	:	Elaborate the need for Data Analytics and Security in IoT.				
CO4	:	Illustrate different sensor technologies for sensing real world entities and identify the applications of IoT in Industry.

Hours	: 42L			SEE Durations	:
Faculty Coordinator:		Prof. Rashmi R			
UNIT - I					9 Hrs
Decomposition Strategies : What is the microservice architecture exactly?, What is software architecture and why it matters, Overview of architectural styles, The microservice architecture is an architectural style, Defining an application's microservice architecture, Identifying the system operations, Defining services by applying the Decompose by business capability pattern, Defining services by applying the Decompose by sub-domain pattern, Decomposition guidelines, Obstacles to decomposing an application into services, Defining service APIs. Inter-Process Communication in a Microservice Architecture : Overview of inter-process communication in a microservice architecture, Communicating using the synchronous Remote procedure invocation pattern, Communicating using the asynchronous Messaging pattern, using asynchronous messaging to improve availability.					
UNIT - II					9 Hrs
Managing Transactions with Sagas : Transaction management in a microservice architecture, Coordinating sagas, Handling the lack of isolation, The design of the Order Service and the Create Order Saga. Designing Business Logic in a Microservice Architecture : Business logic organization patterns, Designing a domain model using the DDD aggregate pattern, Publishing domain events, Kitchen Service business logic.					
UNIT - III					8 Hrs
Developing Business Logic with Event Sourcing : Developing business logic using event sourcing, Implementing an event store, Using sagas and event sourcing together. Implementing Queries in a Microservice Architecture : Querying using the API Composition pattern, Using the Command Query Responsibility Segregation (CQRS) pattern, Designing CQRS Views.					
UNIT - IV					8 Hrs
Testing Microservices : Testing strategies for microservice architectures, Writing unit tests for a service. Developing Production Ready Services : Developing secure services, Designing configurable services, Designing observable services, Developing services using the Microservice chassis pattern.					
UNIT - V					8 Hrs
Deploying Microservices : Deploying services using the Language-specific packaging format pattern, Deploying services using the Service per Virtual machine pattern, Deploying services using the Service per container pattern, Deploying the FTGO application with Kubernetes, Deploying services using the Serverless deployment pattern.					
Course Outcomes: After going through this course the student will be able to:					
CO1	:	Comprehend the concepts of microservices architecture and deciding when to use microservices.			
CO2	:	Design and develop microservices using several patterns.			
CO3	:	Develop and test microservices.			
CO4	:	Migrate to a microservice architecture and deploy the microservices.

UNIT - I				8 Hrs
Research Problem: Problem Solving – General Problem Solving, Logical Approach, Soft System Approach, Creative Approach, Group Problem Solving Techniques for Idea Generation. Formulation of Research Problems – Approaches to Research Problem, Exploration for Problem Identification, Hypothesis Generation and Formulation of the problem.				
UNIT - II				9 Hrs
Research Design: Experimental Design – Principles of Experiment, Laboratory Experiment, Experimental Design, Quasi Experimental Design, Action. Research, Validity and Reliability of Experiment and Quasi Experiments. Ex Post Facto Research – Exploratory Research, Historical Research, Descriptive Research, Field Studies, Survey Research, Qualitative Research Methods.				
UNIT - III				8 Hrs
Research Design for Data Acquisition: Measurement Design – Primary types of Measurement scales, Validity and Reliability Measurement, Sample Design – Non-Probability Sampling, Probability Sampling. Data Collection Procedures – Sources of secondary data, Primary data collection methods, Validity and Reliability of data collection procedures.				
UNIT - IV				9 Hrs
Data Analysis: Exploratory Data Analysis, Statistical Estimation, Hypothesis Testing, Parametric Tests, Non-Parametric Tests, Multiple Regression, Factor Analysis, Cluster Analysis				
UNIT - V				8 Hrs
Research Proposal: Purpose, Types, Development of Proposal, Evaluation of Research Proposal. Report Writing: Pre-writing consideration, Format of Reporting, Briefing, Best practices for Journal writing.				
Course Outcomes:				
After going through this course the student will be able to:				
CO1	:	Recognize the principles and concepts of research types, data types and analysis procedures.		
CO2	:	Apply appropriate method for data collection and analyze the data using statistical principles.		
CO3	:	Express research output in a structured report as per the technical and ethical standards.		
CO4	:	Develop a research design for the given engineering and management problem context.

UNIT - I				9 Hrs
Revolution in the cloud: The creation of the cloud, The dawn of DevOps, The Coming of Containers, Conducting the Container Orchestra, Kubernetes, Cloud Native, The Future of Operations. First Steps with Kubernetes : Running Your First Container, The Demo Application, Building a Container, Container Registries, Hello Kubernetes, Minikube. Getting Kubernetes : Cluster Architecture, The Costs of Self-Hosting Kubernetes, Managed Kubernetes Services, Kubernetes Installers, Clusterless Container Services.				
UNIT - II				9 Hrs
Working with Kubernetes Objects: Deployments, Pods, ReplicaSets, Maintaining Desired State, The Kubernetes Scheduler, Resource Manifests in YAML Format, Helm: A Kubernetes Package Manager. Managing Resources: Understanding Resources, Managing the Container Life Cycle, Using Namespaces, Optimizing Cluster Costs.				
UNIT - III				8 Hrs
Operating Clusters: Cluster Sizing and Scaling, Conformance Checking, Chaos Testing. Kubernetes Power Tools: Mastering kubectl, Working with Resources, Working with Containers, Contexts and Namespaces, Kubernetes Shells and Tools Kubernetes IDEs.				
UNIT - IV				8 Hrs
Running Containers: Containers and Pods, Container Manifests, Container Security, Volumes, Restart Policies, Image Pull Secrets, Init Containers. Managing Pods: Labels, Node Affinities, Pod Affinities and Anti-Affinities, Taints and Tolerations, Pod Controllers, Ingress, Service Mesh.				
UNIT - V				8 Hrs
Configuration and Secrets: ConfigMaps, Kubernetes Secrets, Secrets Management Strategies, Encrypting Secrets with Sops, Sealed Secrets. Security, Backups, and Cluster Health: Access Control and Permissions, Cluster Security Scanning, Container Security Scanning, Backups, Monitoring Cluster Status.				
LABORATORY				28 Hrs
1. Introduction to Source Control like (Git, Gitlab, Code Review, Pull request, etc) 2. Docker Fundamentals (Image, Container, volumes, networking) 3. Kubernetes (Introduction, Deployment platform) 4. Continuous Integration(CI) and Continuous Deployment(CD). 5. Hands on working with IBM CI/CD Devops toolchains. 6. Best industry practices for Devops on cloud. Pre-requisite (Must be completed by students before start of the lab) 1. IBM Cloud Account. (https://cloud.ibm.com/registration) 2. IBM Kubernetes Cluster (https://www.ibm.com/in-en/cloud/free/kubernetes) 3. Docker Desktop (https://www.docker.com/products/docker-desktop) for windows/Mac 4. IBM Cloud CLI (https://cloud.ibm.com/docs/cli?topic=cli-getting-started) 5. Git (https://git-scm.com) IBM portals for hands-on lab study : Docker Essentials https://www.credly.com/org/ibm/badge/docker-essentials-a-developer-introduction Kubernetes Essentials https://www.credly.com/org/ibm/badge/operating-kubernetes-on-ibm-cloud Cloud Native Applications https://www.credly.com/org/ibm/badge/building-cloud-native-and-multicloud-applications https://developer.ibm.com/tutorials/build-a-cicd-tekton-pipeline-for-deploying-a-nodejs-application/				
Course Outcomes: After going through this course the student will be able to:				
CO1	:	Apply the concept of cloud native DevOps to applications.		
CO2	:	Analyse the usage of cloud, creating a docker image, kubernetes deployment for a given application.		
CO3	:	Design and implement cloud native applications and deployment.		
CO4	:	Evaluate the building, deploying and scaling of applications in cloud.

UNIT - I					9 Hrs
Envisioning Architecture : The Architecture Business Cycle, What is Software Architecture, Architectural patterns, reference models, reference architectures, architectural structures and views. Creating an Architecture Quality Attributes, Achieving qualities, Architectural styles and patterns, designing the Architecture, Documenting software architectures, Reconstructing Software Architecture.					
UNIT - II					9 Hrs
Analyzing Architectures : Architecture Evaluation, Architecture design decision making, ATAM, CBAM. Moving from one system to many Software Product Lines, Building systems from off the shelf components, Software architecture in future.					
UNIT - III					8 Hrs
Patterns : Pattern Description, Organizing catalogs, role in solving design problems, Selection and usage. Creational and Structural patterns Abstract factory, builder, factory method, prototype, singleton, adapter, bridge, composite, façade, flyweight.					
UNIT - IV					8 Hrs
Behavioral Patterns : Chain of responsibility, command, Interpreter, iterator, mediator, memento, observer, state, strategy template method, visitor.					
UNIT - V					8 Hrs
Case Studies					
A-7E – A case study in utilizing architectural structures, The World Wide Web – a case study in interoperability, Air Traffic Control – a case study in designing for high availability, Celsius Tech – a case study in product line development					
Course Outcomes:					
After going through this course the student will be able to:					
CO1	:	Use design patterns to keep code quality high without overdesign.			
CO2	:	Apply the knowledge to create an architecture for given application			
CO3	:	Analyze the architecture and build the system from the components.			
CO4	:	Design creational and structural patterns and implement a case study in utilizing architectural structures

UNIT - I					9 Hrs
What is Robotic Process Automation? Scope and Techniques of automation: what should be automated? What can be automated? Techniques of automation Robotic Process Automation: What can RPA do? Benefits of RPA Components of RPA, RPA platforms. About UiPath. The future of automation. Record and Play: UiPath stack, Downloading and Installing UiPath Studio, Learning UiPath Studio, Task Recorder, Emptying trash in Gmail, Emptying Recycle Bin.					
UNIT - II					9 Hrs
Sequence, Flowchart, and Control Flow: Sequencing the workflow, Activities, Control flow, various types of loops, and decision making, how to use a sequence, how to use a flowchart, step by step example using sequence and control flow. Data Manipulation: Variables and scope, Collections, Arguments-purpose and use, Data table usage with examples, Clipboard management, File operation with step-by-step example. CSV/Excel to data table and vice versa examples.					
UNIT - III					8 Hrs
Taking control of the controls : Finding and attaching windows, Finding the control, Techniques for waiting for a control, Act on controls-mouse and keyboard activities, working with UiExplorer, Handling events, Revisit recorder, Screen scraping, When to use OCR, Types of OCR available, How to use OCR, Avoiding typical failure points. Tame that Application with Plugins and Extensions Terminal plugin: SAP automation, Java Plugin, Citrix automation, Mail plugin, PDF plugin, web integration, Excel and Word plugins, Credential management.					
UNIT - IV					8 Hrs
Handling User Events and Assistant Bots: What are assistant bots? Monitoring system event triggers, Monitoring image and element triggers, Launching an assistant bot on a keyboard event. Exception Handling, Debugging, and Logging Exception handling: Common exceptions and ways to handle them, Logging and taking screenshots, Debugging techniques, Collecting crash dumps, Error reporting.					
UNIT - V					8 Hrs
Managing and Maintaining the Code: Project Organization, Nesting workflows, Reusability of workflows, commenting techniques, State Machine, When to use Flowcharts, State Machines or sequences, Using config files and examples of a config file. Deploying and Maintaining the Bot: Publishing using publish utility, Overview of Orchestration Server, Using Orchestration Server to control bots, Using Orchestration Server to deploy bots.					
Course Outcomes:					
After going through this course the student will be able to:					
CO1	:	Apply the concept of Robotic Process Automation to automate various applications.			
CO2	:	Analyse the usage of appropriate Robotic Process Automation technique for a given application.			
CO3	:	Design and implement techniques of Robotic Process Automation.			
CO4	:	Evaluate the code for deployment and maintenance.

Scheme of Continuous Internal Evaluation (CIE): 20 + 40 + 40 = 100

QUIZZES: Quizzes will be conducted in online/offline mode. Two quizzes will be conducted & Each Quiz will be evaluated for 10 Marks. The sum of two quizzes will be the Final Quiz marks.

TESTS: Students will be evaluated in test, descriptive questions with different complexity levels (Revised Bloom's Taxonomy Levels: Remembering, Understanding, Applying, Analyzing, Evaluating, and Creating). Two tests will be conducted. Each test will be evaluated for 50 Marks, adding upto 100 Marks. Final test marks will be reduced to 40 Marks.

EXPERIENTIAL LEARNING: Students will be evaluated for their creativity and practical implementation of the problem. Case study-based teaching learning and Program specific requirements (15), Video based seminar/presentation/demonstration (25) adding upto 40 marks.

Scheme of Semester End Examination (SEE) for 100 marks: The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

SEMESTER: II					
Course Code	: 22MSE2C2T	SOFTWARE PROJECT MANAGEMENT	CIE Marks	:	100
Credits L-T-P	: 3 - 0 - 0		SEE Marks	:	100
Hours	: 42L		SEE Durations	:	3 Hrs
Faculty Coordinator:		Prof. Rekha B S			
UNIT - I					9 Hrs
PROJECT EVALUATION AND PROJECT PLANNING : Importance of Software Project Management – Activities - Methodologies – Categorization of Software Projects – Setting objectives – Management Principles – Management Control – Project portfolio Management – Cost-benefit evaluation technology – Risk evaluation – Strategic program Management – Stepwise Project Planning.					
UNIT - II					9 Hrs
PROJECT LIFE CYCLE AND EFFORT ESTIMATION : Software process and Process Models – Selection of an Appropriate Project Approach - Rapid Application development – Agile methods – Dynamic System Development Method – Extreme Programming– Managing interactive processes – Basics of Software estimation – Effort and Cost estimation techniques – COSMIC Full function points - COCOMO II - a Parametric Productivity Model.					
UNIT - III					8 Hrs
ACTIVITY PLANNING AND RISK MANAGEMENT : Objectives of Activity planning – Project schedules – Activities – Sequencing and scheduling – Network Planning models – Formulating Network Model – Forward Pass & Backward Pass techniques – Critical path (CRM) method – Risk Management – Nature of Risks, Types of Risks, Managing Risks, Risk Planning and Control, Evaluating risks to the schedule – Resource Allocation – Identifying Resources Requirements, Scheduling Resources, Creation of critical paths – Cost schedules.					
UNIT - IV					8 Hrs
PROJECT MONITORING AND CONTROL : Framework for monitoring and control – Collection of data – Visualizing progress – Cost monitoring – Earned Value Analysis – Prioritizing Monitoring – Project tracking – Change control – Software Configuration Management – Managing contracts – Contract Management.					
UNIT - V					8 Hrs
MANAGING PEOPLE AND ORGANIZING TEAMS : Organizational behavior – Best methods of staff selection - Instruction in the best method - Motivation – Working in teams – Decision making – Leadership, Organizational structures					
Course Outcomes: After going through this course the student will be able to:					
CO1	:	Understand Software Project Manamement principles to be followed during its development.			
CO2	:	Estimate the risks involved in various Project activities.			
CO3	:	Gain extensive knowledge about the basic concepts, framework and the process models.			
CO4	:	Obtain adequate knowledge about software process models and software effort estimation techniques.

Course Code	: 22MSE2C3T	User Interface and User Experience (UI & UX)	CIE Marks	:	100
Credits L-T-P	: 3- 0 - 0		SEE Marks	:	100
Hours	: 42L		SEE Durations	:	3 Hrs
Faculty Coordinator:		Dr.Mamatha G S			
UNIT - I					9 Hrs
What's a UI Pattern? : How Users Interact With Design Patterns, Following Universal Design Conventions, Applying Empathy to UI Design Patterns. Why Use UI Patterns?: Why Patterns Work, Expectations Reinforce Themselves, Deadline-Busting Communication, Why not use patterns?. The Importance of Prototyping First: Got a Pattern? Plan it Out, Thinking Through the Process, Patterns Take Guesswork Off of Developers' Plates.					
UNIT - II					9 Hrs
User Testing: Insights You Can't Ignore. Prototyping UI Patterns: Explaining the Gray Box, Pattern Libraries Are Prototyping Shortcuts, Reusable elements, Patterns and Prototypes Work Together, Applying UI Design Patterns: Building a Pattern Library, Riffing on Design Patterns, Tweaking Pattern Styles, Going forward, Useful UI Pattern Examples, Formatting Data, Getting input, Navigation, Teasers.					
UNIT - III					8 Hrs
Design for Usefulness: Painkillers & Vitamins, Embracing Goal-Centered Design, Test for Relevancy With an MVP, A Quick MVP Case Study: Buffer. Designing for Usability: Forgiving, Satisfying, The 6-Step Process to Improve Usability. Designing for Desirability: Desirable Products Are More Usable, Desire Is Relative to Users, Elements of Desirable Design.					
UNIT - IV					8 Hrs
Designing for Findability : Building the Right Information Architecture, 5 IA Layouts for the Web, 5 Navigational Menu Patterns, Testing Findability. Designing for Accessibility: Universal Design, What Accessibility Means for UX Design, Benefits of Accessibility, Accessibility Best Practices					
UNIT - V					8 Hrs
The Core of Desirable Design: The Habit Loop, A Quick Case Study, Quick Case Study: Apple.com. Designing for Credibility: First Impressions Matter, Quick Case Study: Chase, Building a Credible Product Interface, Selling the Product Through Social Proof, Persuading Through Transparency.					
Course Outcomes: After going through this course the student will be able to:					
CO1	:	Apply the concept of User Interface and User Experience to increase look and feel various applications.			
CO2	:	Analyse the usability, accessability, availability and other factors of User Interface design patterns.			
CO3	:	Design and implement techniques of implementing design patterns.			
CO4	:	Evaluate the design patetrns and elements of user experience.

Hours	: 42L		<i>Elective C (Professional Elective)</i>	SEE Durations	:
Faculty Coordinator:		Prof. B K Srinivas			
UNIT - I					9 Hrs
Introduction to Requirements Engineering; Motivation, Requirement Engineering-Definition, Requirement vs Goals, Requirement Level Classification, Requirement Specification Types, Domain Vocabulary Understanding, Requirements Engineering Activities, The Requirement Engineer, Requirement Engineering Paradigms, Problems with Traditional Requirements Engineering, Difficulties in enveloping system Behavior.					
Mission Statement, Customers, and Stakeholders; Customer interaction, Stakeholders, Customer Wants and needs, Customer Mindset, Stakeholder Prioritization, Communicating with Customers and other Stakeholders, Stakeholder Negotiations.					
UNIT - II					9 Hrs
Requirements Elicitation; Introduction, Elicitation Techniques - Survey, Elicitation Summary, Elicitation Support Technologies.					
Requirements Risk Management; Definition, Requirements Validation and Verification - Techniques, Requirement Validation Matrix, Importance of Measuring in Requirement Verification and Validation, Standards for Verification and Validation					
UNIT - III					8 Hrs
Requirements Management; Introduction, Expectation: Pascal's Wager, Global Requirement Management, Antipatterns in Requirements Management, Other Paradigms for Requirements Management, Reference Models					
Requirement Management and Engineering; Advantages of RM & E in project management, Advantages for finding solutions in design and architecture, Advantages in customer service, sales and marketing, Advantages in test and verification management.					
UNIT - IV					8 Hrs
Writing the Requirements Document: Requirements Presentation Approaches, IEEE Standard 830-1998, Use Cases, Behavioral Specifications, The Requirements Document, Best Practices					
Requirement Specification and Agile Methodologies: Introduction, Principles, Extreme Programming, Scrum, Requirements Engineering for Agile Methodologies, Writing User Stories, Agile Requirements Engineering, Challenges for Requirements Engineering in Agile Methodologies					
UNIT - V					8 Hrs
Tool Support for Requirements Engineering: Introduction, Traceability Support, Commercial Requirement Engineering Tools, Open Source Requirement Engineering Tools, Open Source Requirements Management Tools, Requirements Engineering Tool Best Practices, NASA Requirement Testing- NASA ARM Tool, Imperatives, Continuances, Directives, Options, Weak Phrases					
Course Outcomes: After going through this course the student will be able to:					
CO1	:	Identify the obvious difficulties in trying to communicate about a system, highlights the importance of domain understanding in requirements engineering			
CO2	:	Understand the formal methods, social models, and modern requirements writing techniques to be useful to the practicing engineer.			
CO3	:	Validate requirements as they are written to avoid submitting a bad document for review.			
CO4	:	Gain insight on software tools and techniques for requirements engineering and management to simplify the process of requirement management.

Hours	: 42L		SEE Durations	: 3 Hr
Faculty Coordinator:		Dr Nagashree Rao and Dr Ashwani Sharma		
UNIT - I				8 Hrs
Introduction to Bio-inspired Engineering: Macromolecules, Stem cells; types and applications. Synthetic Biology; Bottom-up' and 'top-down' engineering approaches. Synthetic/ artificial life. Biological Clock, Genetic Algorithms.				
UNIT - II				9 Hrs
Principles of bioinspired materials: Biological and synthetic materials, Self-assembly, hierarchy and evolution. Biopolymers, Bio-steel, Bio-composites, multi-functional biological materials. Thermal Properties. Antireflection and photo-thermal biomaterials, Microfluidics in biology, Invasive and non-invasive thermal detection inspired by skin				
UNIT - III				9 Hrs
Lessons from Nature:Bioinspired Materials and mechanism: Firefly-Bioluminescence, Cocklebur -Velcro, Lotus leaf - Self-cleaning materials, Gecko - Gecko tape, Whale fins - Turbine blades, Box Fish / Bone - Bionic car, Shark skin - Friction reducing swim suits, Kingfisher beak - Bullet train, Coral - Calera cement, Forest floor / Ecosystem functioning - Flooring tiles, Morpho butterfly- Structural color, Namib beetle- Water collecting, Termite mound passive cooling, Birds/Insects- flights/ aerodynamics, Mosquito inspired micro needle.				
UNIT - IV				8 Hrs
Biomedical Inspiration-Concept and applications: Organ system- Circulatory- artificial blood, artificial heart, pacemaker. Respiratory- artificial lungs. Excretory- Artificial kidney and skin. Artificial Support and replacement of human organs: artificial liver and pancreas. Total joint replacements- artificial limbs. Visual prosthesis -artificial eye/ bionic eye.				
UNIT - V				8 Hrs
Biomimetics: Inventions in nature for Human Innovation: Photosynthesis and Photovoltaic cells, Bionic/Artificial leaf. Bio-ink and 3D-Bioprinting. Cellular automata. Biosensors: Artificial tongue and nose. Biomimetic echolocation. Insect foot adaptations for adhesion. Thermal insulation and storage materials. Bees and Honeycomb Structure. Artificial Intelligence, Neural Networking and bio-robotics.				
Course Outcomes: After going through this course the student will be able to:				
CO1	: Elucidate the concepts and phenomenon of natural processes			
CO2	: Apply the basic principles for design and development of bioinspired structures			
CO3	: Analyse and append the concept of bio-mimetics for diverse applications			
CO4	: Designing technical solutions by utilization of bio-inspiration modules.

Faculty Coordinator:		Dr. Azra Nasreen and Dr. Badarinath K		
UNIT - I				9 Hrs
Overview of Business analytics, Scope of Business analytics, Business Analytics Process, Relationship of Business Analytics Process and organization, competitive advantages of Business Analytics. Statistical Tools: Statistical Notation, Descriptive Statistical methods, Review of probability distribution and data modelling.				
UNIT - II				9 Hrs
Trendiness and Regression Analysis Modelling Relationships and Trends in Data, simple Linear Regression. Important Resources, Business Analytics Personnel, Data and models for Business analytics, problem solving, Visualizing and Exploring Data, Business Analytics Technology.				
UNIT - III				8 Hrs
Organization Structures of Business analytics Team management, Management Issues, Designing Information Policy, Outsourcing, Ensuring Data Quality, Measuring contribution of Business analytics, Managing Changes. Descriptive Analytics, Predictive Analytics, Predicative Modelling, Predictive analytics analysis.				
UNIT - IV				8 Hrs
Forecasting Techniques Qualitative and Judgmental Forecasting, Statistical Forecasting Models, Forecasting Models for Stationary Time Series, Forecasting Models for Time Series with a Linear Trend, Forecasting Time Series with Seasonality, Regression Forecasting with Casual Variables, Selecting Appropriate Forecasting Models.				
UNIT - V				8 Hrs
Decision Analysis Formulating Decision Problems, Decision Strategies with and without Outcome, Probabilities, Decision Trees, The Value of Information, Utility and Decision Making.				
Course Outcomes:				
After going through this course the student will be able to:				
CO1	:	Apply the concepts and methods of business analytics to solve business problems		
CO2	:	Analyse, model and solve decision problems in different settings		
CO3	:	Interpret results/solutions and identify appropriate courses of action for a given business scenario		
CO4	:	Demonstrate skills like investigation, effective communication, working in team/Individual and following ethical practices by implementing solutions to decision making problems

SEMESTER: II				
Course Code	: 22CV2D04T	INDUSTRIAL AND OCCUPATIONAL HEALTH AND SAFETY	CIE Marks	: 100
Credits L-T-P	: 3-0-0		SEE Marks	: 100
Hours	: 42L		SEE Durations	: 3 Hrs
Faculty Coordinator:		Dr.V.AnanthaRam		
UNIT - I				08Hrs
Industrial safety: Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes. Fire prevention and fire fighting, equipment and methods.				
UNIT - II				09Hrs
Occupational health and safety: Introduction, Health, Occupational health: definition, Interaction between work and health, Health hazards, workplace, economy and sustainable development, Work as a factor in health promotion. Health protection and promotion Activities in the workplace: National governments, Management, Workers, Workers' representatives and unions, Communities, Occupational health professionals. Potential health hazards: Air contaminants, Chemical hazards, Biological hazards, Physical hazards, Ergonomic hazards, Psychosocial factors, Evaluation of health hazards: Exposure measurement techniques, Interpretation of findings recommended exposure limits. Controlling hazards: Engineering controls, Work practice controls, Administrative controls. Occupational diseases: Definition, Characteristics of occupational diseases, Prevention of occupational diseases.				
UNIT - III				09Hrs
Hazardous Materials characteristics and effects on health: Introduction, Chemical Agents, Organic Liquids, Gases, Metals and Metallic Compounds, Particulates and Fibers, Alkalies and Oxidizers, General Manufacturing Materials, Chemical Substitutes, Allergens, Carcinogens, Mutagens, Reproductive Hazards, Sensitizers and Teratogens, Recommended Chemical Exposure Limits. Physical Agents, Noise and Vibration, Temperature and Pressure, Carcinogenicity, Mutagenicity and Teratogenicity. Ergonomic Stresses: Stress-Related Health Incidents, Eyestrain, Repetitive Motion, Lower Back Pain, Video Display Terminals.				
UNIT - IV				08 Hrs
Wear and Corrosion and their prevention: Wear- types, causes, effects, wear reduction methods, lubricants-types and applications, Lubrication methods, general sketch, working and applications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity lubrication, v. Wick feed lubrication vi. Side feed lubrication, vii. Ring lubrication, Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods.				
UNIT - V				08 Hrs
Periodic and preventive maintenance: Periodic inspection-concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components, over hauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of: I. Machine tools, ii. Pumps, iii. Air compressors, iv. Diesel generating (DG) sets, Program and schedule of preventive maintenance of mechanical and electrical equipment, advantages of preventive maintenance. Repair cycle concept and importance.				
Course Outcomes:				
After going through this course the student will be able to:				
CO1	:	Explain the Industrial and Occupational health and safety and its importance.		
CO2	:	Demonstrate the exposure of different materials, occupational environment to which the employee can expose in the industries.		
CO3	:	Characterize the different type materials, with respect to safety and health hazards of it.		
CO4	:	Analyze the different processes with regards to safety and health and the maintenance required in the industries to avoid accidents.

UNIT - I				8 Hrs
Introduction: –Historical Background, Definition, Future prospectus, ITS training and educational needs. Fundamentals of Traffic Flow and Control- Traffic flow elements, Traffic flow models, Shock waves in Traffic streams, Traffic signalization and control principles, Ramp metering, Traffic simulation				
UNIT - II				9 Hrs
ITS User services-User services bundles, Travel and Traffic management, Public Transportation Operations, Electronic Payment, Commercial Vehicles Operations, Emergency Management, Advanced Vehicle Control and safety systems, Information Management, Maintenance and construction Management. ITS Architecture-Regional and Project ITS Architecture, Need of ITS architecture, concept of Operations, National ITS Architecture, Architecture development tool				
UNIT - III				9 Hrs
Technology Building Blocks for ITS-Introduction, Data acquisition, Communication Tools, Data Analysis, and Traveller Information. Various detection, identification and collection methods for ITS. ITS Applications and their benefits-Freeway and incident management systems, Advanced arterial traffic control systems, Advanced Public Transportation Systems, Multimodal Traveller Information systems				
UNIT - IV				8 Hrs
ITS Planning-Transportation planning and ITS, Planning and the National ITS Architecture, Planning for ITS, Integrating ITS into Transportation Planning, relevant case studies. ITS Standards-Standard development process, National ITS architecture and standards, ITS standards application areas, National Transportation Communications for ITS Protocol, Standards testing				
UNIT - V				8 Hrs
ITS Evaluation – Project selection at the planning level, Deployment Tracking, Impact Assessment, Benefits by ITS components, Evaluation Guidelines, Challenges and Opportunities. ITS for Law Enforcement: Introduction, Enhance and support the enforcement traffic rules and regulations, ITS Funding options and ITS case studies				
Course Outcomes: After going through this course the student will be able to:				
CO1	: Identify and apply ITS applications at different levels			
CO2	: Illustrate ITS architecture for planning process			
CO3	: Examine the significance of ITS for various levels			
CO4	: Compose the importance of ITS in implimentions

UNIT - I				9 Hrs
Design Process & its Fundamentals: Life Cycle of Electronic Products, Design and Development Process, Guidance for Product Planning, Design and Development, Technical Drawings, Circuit Diagrams, Computer-Aided Design (CAD)				
UNIT - II				9 Hrs
System Architecture and Protection Requirements: Introduction - Terminology, Functions and Structures, Systems Design Architecture, Electronic System Levels, System Protection Experiential Learning: (4 quizzes on the below mentioned topics other than CIE) Reliability Analysis: Introduction, Calculation Principles, Exponential Distribution, Failure of Electronic, Components, Failure of Electronic Systems, Reliability Analysis of Electronic Systems, Recommendations for Improving Reliability of Electronic Systems				
UNIT - III				8 Hrs
Thermal Management and Cooling: Introduction - Terminology, Temperatures and Power Dissipation, Calculation Principles, Heat Transfer, Methods to Increase Heat Transfer, Application Examples in Electronic Systems, Recommendations for Thermal Management of Electronic Systems, Cooling systems, liquid, air and non cooling systems.				
UNIT - IV				8 Hrs
Electromagnetic Compatibility (EMC): Introduction, Coupling Between System Components, Grounding Electronic Systems, Shielding from Fields, Electrostatic Discharge (ESD), Recommendations for EMC-compliant Systems Design				
UNIT - V				8 Hrs
Recycling Requirements and Design for Environmental Compliance: Introduction - Motivation and the Circular Economy, Manufacture, Use, and Disposal of Electronic Systems in the Circular Economy, Product Recycling in the Disposal Process, Material Recycling in the Disposal Process, Design and Development for Disassembly, Material Suitability in Design and Development, Recommendations for Environmentally Compliant Systems				
Course Outcomes: After going through this course the student will be able to:				
CO1	:	Realize the fundamentals of Design, Architecture, thermal management, EMC and Recycling requirements of Electronic System Design		
CO2	:	Analyze the various application wise design requirements in Electronic systems along with the related concepts of implementations, standards and Compliances.		
CO3	:	Use modern open source tools to realize the various concepts of Electronic system design		
CO4	:	Engage in self-study through assignments, simulations, case studies and projects

Faculty Coordinator:		Dr. Mahesh A		
UNIT - I				9 Hrs
Introduction to cellular systems: Overview of Cellular Systems and evolution 2G/3G/4G/5G, Cellular Concepts – Frequency reuse, Co channel and Adjacent channel Interference, C/I, Handoff, Blocking, Erlang Capacity, Bluetooth, WiFi, WWAN and PAN.				
UNIT - II				9 Hrs
Fundamentals of wireless communication: Wireless Channel, Wireless propagation, Link budget, Free-space path loss, Noise figure of receiver, Multipath fading, Shadowing, Fading margin, Shadowing margin, Wireless Channel Capacity, OFDM and LTE, Large Scale Propagation effects and Channel Models				
UNIT - III				8 Hrs
Fundamentals of 5G architecture: Difference between 4G and 5G, 5G Architecture, Planning of 5G Network, Quality of Service, Radio Network, Requirements, Security, SIM in 5G Era, Specifications, Standardization, Terminal States				
UNIT - IV				8 Hrs
mmWave and Visible Light Communications: Back ground and concept of mmWave Communications, Frequency bands, propagation characteristics, channel models, applications and challenges in 5G				
UNIT - V				8 Hrs
Future Generations: Future Generations(where is the 6G?), Health Considerations, Identifiers, Interfaces, ,Key Derivation, Location Based Services, Massive Internet of Things, Measurements, Network Functions Virtualization, Network Slicing, Open Source, , User Equipment, Vehicle-to-Vehicle communications (V2V),Virtual Reality (VR/AR/XR). Case study- Bharath Stack				
Course Outcomes:				
After going through this course the student will be able to:				
CO1	:	Demonstrate their understanding on functioning of wireless communication system and evolution of different wireless communication systems and standards		
CO2	:	Compare different technologies used for wireless communication systems.		
CO3	:	Demonstrate an ability explain recent techniques for Wireless Communication systems		
CO4	:	Update the latest trends in wireless communications

UNIT - I				9 Hrs
An Introduction to Radar: Basic Radar, The simple form of the Radar Equation, Radar Block Diagram, Radar Frequencies, Application of radar, Types of Radars. Detection of signals in Noise, Receiver Noise and the Signal-to Noise Ratio, Probability of Detection and False alarm, Introduction to Doppler, MTI, UWB Radars				
UNIT - II				8 Hrs
Terrestrial Network based positioning and navigation: General Issues of wireless positions location, Fundamentals, positioning in cellular networks, positioning in WLANs, Positioning in Wireless sensor networks.				
UNIT - III				8 Hrs
Satellite-based navigation systems: Global Navigation satellite systems (GNSS), GNSS receivers.				
UNIT - IV				9 Hrs
LiDAR: Introduction to LiDAR, context and conceptual discussion of LiDAR, Types of LiDARS, LiDARS Detection modes, Flash LiDAR versus Scanning LiDAR, Monostatic versus Bistatic LiDAR, Major Devices in a LiDAR, LiDAR remote sensing, Basic components and physical principles of LiDAR, LiDAR accuracy and data formats.				
UNIT - V				8 Hrs
SONAR: Underwater acoustics, applications, comparison with radar, submarine detection and warfare, overcoming the effects of the ocean, sonar and information processing. Transmission of the acoustic signal: Introduction, detection contrast and detection index, transmission equation, equation of passive and active sonar.				
Course Outcomes:				
After going through this course the student will be able to:				
CO1	:	Understand the concepts of Radar, LiDAR, Sonar, terrestrial and satellite based navigation system		
CO2	:	Apply the concepts of radars, LiDAR, Sonar, cellular networks, WLAN, sensor networks and satellites in determining the user position and navigation.		
CO3	:	Analyze the different parameters of satellite and terrestrial networks for navigation systems.		
CO4	:	Evaluate the Radar, LiDAR, Sonar systems and satellite and terrestrial network based navigation and tracking systems

UNIT - I				8 Hrs
Introduction: Project Planning, Need of Project Planning, Project Life Cycle, Roles, Responsibility and Team Work, Project Planning Process, Work Breakdown Structure (WBS), Introduction to Agile Methodology.				
UNIT - II				8 Hrs
Capital Budgeting: Capital Investments: Importance and Difficulties, phases of capital budgeting, levels of decision making, facets of project analysis, feasibility study – a schematic diagram, objectives of capital budgeting				
UNIT - III				9 Hrs
Project Costing: Cost of Project, Means of Finance, Cost of Production, Working Capital Requirement and its Financing, Profitability Projections, Projected Cash Flow Statement, Projected Balance Sheet, Multi-year Projections, Financial Modeling, Social Cost Benefit Analysis				
UNIT - IV				8 Hrs
Tools & Techniques of Project Management: Bar (GANTT) chart, bar chart for combined activities, logic diagrams and networks, Project evaluation and review Techniques (PERT) Critical Path Method (CPM), Computerized project management				
UNIT - V				9 Hrs
Project Management and Certification: An introduction to SEI, CMMI and project management institute USA – importance of the same for the industry and practitioners. PMBOK 6 - Introduction to Agile Methodology, hemes / Epics / Stories, Implementing Agile. Domain Specific Case Studies on Project Management: Case studies covering project planning, scheduling, use of tools & techniques, performance measurement.				
Course Outcomes: After going through this course the student will be able to:				
CO1	:	Explain project planning activities that accurately forecast project costs, timelines, and quality.		
CO2	:	Evaluate the budget and cost analysis of project feasibility.		
CO3	:	Analyze the concepts, tools and techniques for managing projects.		
CO4	:	Illustrate project management practices to meet the needs of Domain specific stakeholders from multiple sectors of the economy (i.e. consulting, government, arts, media, and charity organizations).

Scheme of Continuous Internal Evaluation (CIE): 20 + 40 + 40 = 100				
QUIZZES: Quizzes will be conducted in online/offline mode. Two quizzes will be conducted & Each Quiz will be evaluated for 10 Marks. The sum of two quizzes will be the Final Quiz marks.				
TESTS: Students will be evaluated in test, descriptive questions with different complexity levels (Revised Bloom's Taxonomy Levels: Remembering, Understanding, Applying, Analyzing, Evaluating, and Creating). Two tests will be conducted. Each test will be evaluated for 50 Marks, adding upto 100 marks. Final test marks will be reduced to 40 Marks.				
EXPERIENTIAL LEARNING: Students will be evaluated for their creativity and practical implementation of the problem. Case study-based teaching learning and Program specific requirements (15), Video based seminar/presentation/demonstration (25) adding upto 40 marks.				
Scheme of Semester End Examination (SEE) for 100 marks: The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

UNIT - I				8 Hrs
Advanced Database Models, Systems, and Applications : Enhanced Data Models: Introduction to Active, Temporal, Spatial, Multimedia, and Deductive Databases . Distributed Database Concepts : Distributed Database Concepts, Data Fragmentation, Replication, and Allocation Techniques for Distributed Database Design, Overview of Concurrency Control and Recovery in Distributed Databases				
UNIT - II				8 Hrs
Introduction to Information Retrieval and Web Search : Information Retrieval (IR) Concepts Retrieval Models, Types of Queries in IR Systems , Text Preprocessing , Inverted Indexing, Evaluation Measures of Search Relevance ,Web Search and Analysis, Trends in Information Retrieval .				
UNIT - III				8 Hrs
Information Systems, Organizations and Strategy: Organizations and information systems, How information systems impact organization and business firms, Using information systems to gain competitive advantage, management issues, Ethical and Social issues in Information Systems: Understanding ethical and Social issues related to Information Systems, Ethics in an information society, The moral dimensions of information society. A Case study on business planning.				
UNIT - IV				9 Hrs
Achieving Operational Excellence and Customer Intimacy: Enterprise systems, Supply chain management(SCM) systems, Customer relationship management(CRM) systems, Enterprise application. E-commerce: Digital Markets Digital Goods: E-commerce and the internet, E-commerce-business and technology, The mobile digital platform and mobile E-commerce, Building and E-commerce web site. A Case study on ERP.				
UNIT - V				9 Hrs
Managing Knowledge: The knowledge management landscape, Enterprise-wide knowledge management system, Knowledge work systems, Intelligent techniques. Enhancing Decision Making: Decision making and information systems, Business intelligence in the enterprise. Business intelligence constituencies. Building Information Systems: Systems as planned organizational change, Overview of systems development.				
Course Outcomes: After going through this course the student will be able to:				
CO1	: Understand the different models for Infromation Retrieval.			
CO2	: Appricieate the technology of Information Retrieval and Web Search			
CO3	: To understand the basic principles and working of information technology.			
CO4	: Describe the role of information technology and information systems in business.

UNIT - I				8 Hrs
Overview: Introduction: Professional Software Development, Software Engineering Ethics, Case studies. Software Processes: Models, Process activities, Coping with Change, Process improvement. The Rational Unified Process. Computer Aided Software Engineering. Agile Software Development: Introduction to agile methods, Agile development techniques, Agile project management and scaling agile methods. Information Systems in Global Business Today: The role of information systems in business today, Perspectives on information systems, Contemporary approaches to information systems				
UNIT - II				9 Hrs
Requirements Engineering and System Modeling: Software Requirements: Functional and Non-functional requirements. Requirements Elicitation, Specification, Validation and Change. System Modeling: Context models, Interaction models, Structural models, Behavioural models, Model driven architecture. Information Systems, Organizations and Strategy: Organizations and information systems, How information systems impact organization and business firms, Using information systems to gain competitive advantage, management issues				
UNIT - III				9 Hrs
Development and Testing: Design and implementation: Object oriented design using UML, Design patterns, Implementation issues, Open-source development. Software Testing: Development testing, Test-driven development, Release testing, User testing. Securing Information Systems: System vulnerability and abuse, Business value of security and control, Establishing framework for security and control, Technology and tools for protecting information resources. A case study on cybercrime.				
UNIT - IV				8 Hrs
Advanced Software Engineering: Dependable systems: Dependability properties, Sociotechnical systems, dependable processes, formal methods and dependability, A15 Availability and reliability, reliability requirements, Reliability measurements E-commerce: Digital Markets Digital Goods: E-commerce and the internet, E-commerce-business and technology, A Case study on ERP.				
UNIT - V				8 Hrs
Software Management: Project Management: Risk Management, Managing People, Teamwork, Project Planning: Software Pricing, Plan driven development, Project Scheduling, Agile planning, Estimation Techniques, COCOMO cost modeling. Building Information Systems: Systems as planned organizational change, Overview of systems development.				
Course Outcomes: After going through this course the student will be able to:				
CO1	: Understand and apply the fundamental concepts of software engineering for information systems.			
CO2	: Develop the knowledge about software engineering for management of information systems.			
CO3	: Interpret and recommend the use information technology to solve business problems.			
CO4	: Apply a framework and process for aligning organization's IT objectives with business strategy.

UNIT - I				9 Hrs
Random Vectors: Probability models of N random variables, Vector notation, Marginal probability functions, Independence of random variables and random vectors, Functions of random vectors, Expected value vector and Correlation matrix, Gaussian random vectors Expected values of sums, Probability density function of the sum of two random variables, Moment Generating Functions (MGF), MGF of the sum of independent random variables, Characteristic function and Probability generating function.				
UNIT - II				8 Hrs
Estimation: Point estimation, Estimator and estimate, Criteria for good estimates - unbiasedness, consistency, efficiency and sufficiency, Variance of a point estimator, Methods of point estimation - Method of moments and Method of maximum likelihood, Bayesian estimation of parameters.				
UNIT - III				9 Hrs
Inferential Statistics: Principles of Statistical Inference, Formulation of the problems with examples. Test of hypothesis - Null and alternative hypothesis, Procedure for statistical testing, Type I and Type II errors: level of significance, Rejection regions and power, Standard Normal null distribution (Z-test), Z-tests for means and proportions, Duality: two-sided tests and two-sided confidence intervals, P-value, Inference about variances, Special tests of significance for large and small samples (F, Chi – square, Z, t – test).				
UNIT - IV				8 Hrs
Fuzzy Optimization: Basic concepts of fuzzy sets - Operations on fuzzy sets, Fuzzy relation equations, Fuzzy logic control, Fuzzification, Defuzzification, Knowledge base, Decision making logic, Membership functions, Rule base. Artificial Neural Networks: Introduction - Neuron model, Multilayer perceptions - Back propagation algorithm and its variants, Loss functions in artificial neural networks, Stochastic gradient descent method.				
UNIT - V				8 Hrs
Machine Learning Algorithms: Data mining, Hierarchy Clustering, k-Means Clustering, Distance Metric, Data mining for Big data, Characteristics of Big data, Statistical nature of Big data, Support Vector Machines, Statistical Learning Theory, Linear Support Vector Machine, Kernel functions and Nonlinear Support Vector Machines.				
Course Outcomes: After going through this course the student will be able to:				
CO1	:	Illustrate the fundamental concepts of statistics, random variables, estimation, inferential statistics, fuzzy optimization and machine learning algorithms.		
CO2	:	Derive the solution by applying the acquired knowledge of random variables, estimation, inferential statistics, fuzzy optimization and machine learning algorithms to the problems of engineering applications.		
CO3	:	Evaluate the solution of the problems using appropriate statistical and probability techniques to the real world problems arising in many practical situations.		
CO4	:	Compile the overall knowledge of statistics, probability distributions and estimation, tests of hypothesis and optimization gained to engage in life – long learning.

Content					
Design and develop Java-based RESTful APIs using the latest versions of the Spring MVC and Spring Boot frameworks. This course helps in designing and building a REST application while delving into design principles and best practices for versioning, security, documentation, error handling, paging, and sorting. Also, skills to build sophisticated REST applications using Spring technologies can be developed.					
Learnings					
<ul style="list-style-type: none">• Build Java-based microservices, native cloud, or any applications using Spring REST• Employ Spring MVC and RESTful Spring• Build a QuickPoll application example• Document REST services, as well as versioning, paging, and sorting• Test, handle errors and secure your application					
Examples of API Integration Use Cases					
Connect Cloud Apps					
Creation of Custom APIs					
Ease the Development of Apps					
Strategic Team Movement					
Multiple Services Management					
Building an Application with Spring Boot					
Spring Boot offers a fast way to build applications. It gives focus more on business features and less on infrastructure.					
References:					
<ul style="list-style-type: none">• Modern API Development with Spring and Spring Boot: Design highly scalable and maintainable APIs with REST, gRPC, GraphQL, and the reactive paradigm Kindle Edition by Sourabh Sharma.• Mastering Spring Boot 2.0: Build modern, cloud-native, and distributed systems using Spring Boot , 2018 by Dinesh rajput• Spring REST: Building Java Microservices and Cloud Applications 2nd ed. Edition by Balaji Varanasi• Learn Microservices with Spring Boot: A Practical Approach to RESTful Services using RabbitMQ, Eureka, Ribbon, Zuul and Cucumber, January 2018

Course Outcomes:					
After going through this course the student will be able to:					
CO1	:	Learn how to authorize a user with access token			
CO2	:	Learn how to configure Auth0 and implement different servlets			
CO3	:	Learn how to make a transaction with Stripe			
CO4	:	Focus on the unique requirements of an application while outsourcing repetitive complex code to APIs.			
Scheme of Continuous Internal Evaluation (CIE- Laboratory) : Only LAB Course 30 + 10 + 10 = 50. The Laboratory session is held every week as per the timetable and the performance of the student is evaluated in every session. The average of marks over number of experiments conducted over the weeks is considered for 30 Marks i.e (Lab Report, Observation & Analysis). The students are encouraged to implement additional innovative experiments in the lab (10 marks). At the end of the semester a test is conducted for 10 Marks (Lab Test). This adds to 50 Marks.					

Scheme of Semester End Examination (SEE- Laboratory) : Only LAB Course 40 + 10 =50. Students will be evaluated for Write-up, Experimental Setup, Experiment Conduction with Results, Analysis & Discussions for 40 Marks and Viva will be conducted for 10 Marks adding to 50 Marks.

Only LAB Courses with 50 Marks

Communication Skills: Basics of Communication, Personal Skills & Presentation Skills – Introduction, Application, Simulation, Attitudinal Development, Self Confidence, SWOC analysis. Resume Writing: Understanding the basic essentials for a resume, Resume writing tips Guidelines for better presentation of facts. Theory and Applications.				
UNIT - II				8 Hrs
Quantitative Aptitude and Data Analysis: Number Systems, Math Vocabulary, fraction decimals, digit places etc. Simple equations – Linear equations, Elimination Method, Substitution method, Inequalities. Reasoning – a. Verbal - Blood Relation, Sense of Direction, Arithmetic & Alphabet. b. Non- Verbal reasoning - Visual Sequence, Visual analogy and classification. Analytical Reasoning - Single & Multiple comparisons, Linear Sequencing. Logical Aptitude, - Syllogism, Venn-diagram method, Three statement syllogism, Deductive and inductive reasoning. Introduction to puzzle and games organizing information, parts of an argument, common flaws, arguments and assumptions. Verbal Analogies/Aptitude – introduction to different question types – analogies, Grammar review, sentence completions, sentence corrections, antonyms/synonyms, vocabulary building etc. Reading Comprehension, Problem Solving,				
UNIT - III				6 Hrs
Interview Skills: Questions asked & how to handle them, Body language in interview, and Etiquette – Conversational and Professional, Dress code in interview, Professional attire and Grooming, Behavioral and technical interviews, Mock interviews - Mock interviews with different Panels. Practice on Stress Interviews, Technical Interviews, and General HR interviews				
UNIT - IV				5 Hrs
Interpersonal and Managerial Skills: Optimal co-existence, cultural sensitivity, gender sensitivity; capability and maturity model, decision making ability and analysis for brain storming; Group discussion(Assertiveness) and presentation skills;				
UNIT - V				5 Hrs
Motivation: Self-motivation, group motivation, Behavioral Management, Inspirational and motivational speech with conclusion. (Examples to be cited). Leadership Skills: Ethics and Integrity, Goal Setting, leadership ability.				
Course Outcomes:				
After going through this course the student will be able to:				
CO1	:	Develop professional skill to suit the industry requirement.		
CO2	:	Analyze problems using quantitative and reasoning skills		
CO3	:	Develop leadership and inter personal working skills.		
CO4	:	Demonstrate verbal communication skills with appropriate body language.

4. Ethnus, Aptimithra: Best Aptitude Book ,2014 Edition, Tata McGraw Hill ISBN: 9781259058738				

Phase *	Activity
I	Test 1 is conducted after the completion of 9 hours of training programme (3 Classes). Question paper will have two parts. Part A will be Quiz for 10 Marks and Part B for 50 Marks Descriptive answers.
II	Test 2 is conducted after the completion of 18 hours of training programme (6 Classes). Question paper will have two parts. Part A will be Quiz for 10 Marks and Part B for 50 Marks Descriptive answers. Total test marks will be reduced to 30 Marks and Total Quiz marks will be 20 Marks. Final CIE would be 50 Marks.
CIE marks 20 Quiz + 30 Test = 50 Marks	
Semester End Examination: SEE is conducted for 50 Marks for a duration of 2 hours.	

SEMESTER: III					
Course Code	: 22MSE31T	Software Quality Testing and Automation	CIE Marks	:	100
Credits L-T-P	: 3 - 1 - 0		SEE Marks	:	100
Hours	: 42L + 28T		SEE Durations	:	3 Hrs
Faculty Coordinator:		Prof.Rashmi R			
UNIT - I					9 Hrs
Software Quality : Five Views of Software Quality, McCall's Quality Factors and Criteria, Quality Factors, Quality Criteria, Relationship between Quality Factors and Criteria, Quality Metrics, ISO 9126 Quality Characteristics, ISO 9000:2000 Software Quality Standard, ISO 9000:2000 Fundamentals, ISO 9001:2000 Requirements.					
Software Reliability : What is Reliability?, Fault and Failure, Time, Time Interval between Failures, Counting Failures in Periodic Intervals, Failure Intensity, Definitions of Software Reliability, First Definition of Software Reliability, Second Definition of Software Reliability, Comparing the Definitions of Software Reliability, Factors Influencing Software Reliability, Applications of Software Reliability, Comparison of Software Engineering Technologies, Measuring the Progress of System Testing, Controlling the System in Operation, Better Insight into Software Development Process, Operational Profiles, Operation, Representation of Operational Profile.					
UNIT - II					9 Hrs
A Perspective on Testing : Basic Definitions, Test Cases, Insights from a Venn Diagram, Identifying Test Cases, Errors and Fault Taxonomies, Levels of Testing. Generalized Pseudocode : The Triangle Problem, The NextDate Function, The Commission Problem, The SATM System, The Currency Converter, Saturn Windshield Wiper Controller Boundary Value Testing, Equivalence Class Testing, Decision Table based Testing. Path Testing, Program Graphs, DD-Paths, Test Coverage Metrics, Basis Path Testing, Guidelines and Observations, Data Flow Testing.					
UNIT - III					8 Hrs
Life Cycle Based Traditional Waterfall Testing : Testing in Iterative Life Cycles, Agile Testing, Agile Model-Driven Development Model-Based testing, Testing Based on Models, Appropriate Models, Commercial Tool Support for Model-Based Testing. Integration Testing, Decomposition-Based Integration, Call Graph-Based Integration, Path-Based Integration. Example: integration NextDate, Conclusions and Recommendations. System Testing : Threads, Basis Concepts for Requirements Specification, Model-Based Threads Use Case-Based Threads, Long versus Short Use Cases, How Many Use Cases?, Coverage Metrics for System Testing, Supplemental Approaches to System Testing, Non-functional System Testing Atomic System Function Testing Example.					
UNIT - IV					8 Hrs
Test Automation and Architecture : Test Architecture Considerations, Understanding the SUT Architecture, Alternatives and Considerations in a Layered Architecture, Real-World Architecture. Isolation and Test Environments : State, Isolation Problems and Solutions, Isolation Techniques. The Big Picture: The Relationships Between Software Architecture and Business Structure, The Relationships Between Software Architecture and Organizational Structure with Test Automation.					
UNIT - V					8 Hrs
Designing the First Test Case: Choosing the First Test to Automate, The Scientific Method for Designing a Test Case. Start Coding the First Test: Creating the Project, Write the Pseudo-code, Getting the Code to Compile, Model Code Review. Completing the First Test: Running the Test to Find What to Implement First, Adding Selenium to the Project, Implementing the MVCForumClient Constructor, Implementing RegisterNewUserAndLogin, Hitting the Isolation Problem, Implementing CreateDiscussion and Analyzing the Failure, Completing the Test.					
Course Outcomes: After going through this course the student will be able to:					
CO1	:	Comprehend the concepts of prime layers in Enterprise application development to solve real world problems.			
CO2	:	Design the architecture of EA through mapping of patterns to database and implementing concurrency.			
CO3	:	Develop Enterprise Application with appropriate web presentation techniques and Session state attributes.			

CO4	: Plan and define software construction map for building layers for enterprise applications.
-----	--

Scheme of Continuous Internal Evaluation (CIE): 20 + 40 + 40 = 100

QUIZZES: Quizzes will be conducted in online/offline mode. Two quizzes will be conducted & Each Quiz will be evaluated for 10 Marks. The sum of two quizzes will be the Final Quiz marks.

TESTS: Students will be evaluated in test, descriptive questions with different complexity levels (Revised Bloom's Taxonomy Levels: Remembering, Understanding, Applying, Analyzing, Evaluating, and Creating). Two tests will be conducted. Each test will be evaluated for 50 Marks, adding upto 100 Marks. Final test marks will be reduced to 40 Marks.

EXPERIENTIAL LEARNING: Students will be evaluated for their creativity and practical implementation of the problem. Case study-based teaching learning and Program specific requirements (15), Video based seminar/presentation/demonstration (25) adding upto 40 marks.

Scheme of Semester End Examination (SEE) for 100 marks: The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

Rubric for CIE & SEE Theory courses

RUBRIC for CIE			RUBRIC for SEE

SEMESTER: III					
Course Code	: 22MIT3E1T	AUGMENTED REALITY & VIRTUAL REALITY	CIE Marks	:	100
Credits L-T-P	: 3 - 1 - 0		SEE Marks	:	100
Hours	: 42L+28T		SEE Durations	:	3 Hrs
Faculty Coordinator:		Dr.Ashwini K B			
UNIT - I					9 Hrs
Introduction to Virtual Reality and its applications, Geometry of Virtual Worlds: Geometric models, Transforming models, 2D and 3D rotation yaw, pitch, and roll Programming with Unity: Unity Basics, Manipulating the Scene, Code blocks and Methods, Debugging Conditional and looping statements					
UNIT - II					9 Hrs
Programming with Unity: Working with objects, Working with Scripts, Player movement, Camera Movement, Menu and UI, Advanced 3D movement Further Learning for Unity: The Asset Store. Mouse-Aimed camera: First Person Controller, Third Person Controller.					
UNIT - III					8 Hrs
Augmented Reality, Mixed Reality and its applications, Tracking: Tracking, Calibration, and Registration, Characteristics of Tracking Technology, Stationary Tracking Systems, Mobile Sensors, Optical Tracking, Sensor Fusion. Computer Vision for Augmented Reality : Marker-based tracking, Marker-less tracking.					
UNIT - IV					8 Hrs
Modeling Tools for AR : An introduction to Blender. Modeling of an object, Sculpting objects, Importing from Blender to Unity, Modifiers, Particle system, Animation.					
UNIT - V					8 Hrs
Introduction to WebXR: Entering VR through WebXR, Life cycle of WebXR application, Creating an XR session through WebXR. Creating an AR website with WebXR: Object creation, spatial tracking, start AR session, animate, create an event handling function for the end of the session.					
Course Outcomes: After going through this course the student will be able to:					
CO1	:	Understand the concepts of Virtual Reality/Augmented Reality and its Applications			
CO2	:	Identify immersive effects and its usage to experience AR/VR through exploration of its environment			
CO3	:	Apply virtual/augmented environment to captivate its experiences			
CO4	:	Analyze the technology for unimodal/multimodal user interaction in AR and VR

Hours	:	42L + 28T		SEE Durations	:	3 Hrs
Faculty Coordinator:			Prof. Swetha S			
UNIT - I					9 Hrs	
Introduction to Mobile commerce: Mobile commerce, Mobile commerce framework, Mobile commerce business models, M commerce applications , E commerce vs M commerce. Mobile commerce services: Types of M commerce services , Mobile portal, Applications of mobile commerce in industry, Mobile application development.						
UNIT - II					9 Hrs	
Wireless and Mobile Communication: communication systems, wireless communication, satellite communication, mobile communication systems. Digital cellular Technology : Cellular communications , cellular networks, mobile phone cellular networks. Mobile access technology : Mobile communication standards, Evolution of mobile communication systems, 2G and 3G systems						
UNIT - III					8 Hrs	
4G and 5G systems: 4G features, 4G technologies, IPv6 support, LTE advanced , 4G objectives and Goals, 4G deployment plans, systems, Mobile Devices: Types of Mobile Devices, mobile computers, Mobile Internet Device(MID), Personal Digital Assistant(PDA), Handheld game console, portable media player, pager, Personal Navigation Device, Tablet, Mobile service providers: Mobile network operators, Mobile Virtual network operators, satellite based mobile operators						
UNIT - IV					8 Hrs	
Mobile Banking: Bank in your mobile , Mobile banking business models, mobile banking technologies, mobile banking services, advantages and challenges of mobile banking , mobile banking applications, Tickets on mobile : Mobile ticketing , applications of mobile tickets, advantages of mobile tickets, privacy and security issues, mobile ticketing Apps, mobile ticket providers, Mobile Payment: characteristics of mobile payment systems, mobile payment models, types of mobile payments, security issues						
UNIT - V					8 Hrs	
Mobile computing : Ubiquitous computing , applications of mobile computing , challenges of mobile computing , mobile computing software platforms, Business applications of mobile computing, Security and privacy issues: mobile security concepts, mobile security mechanism, Mobile network security, mobile information security, mobile device security, mobile device security arrangements, mobile application security, mobile security management, Legal aspects: mobile device related laws, cell phone freedom act 2010, information technology act 2000 of India, Privacy and Electronic Communication Regulations act 2003.						
Course Outcomes: After going through this course the student will be able to:						
CO1	:	Describe the value-added attributes, benefits, and fundamental drivers of m-commerce				
CO2	:	Apply the mobile computing infrastructure that supports m-commerce (devices, software, and services)				
CO3	:	Differentiate m-commerce applications in banking and financial services				
CO4	:	Analyze consumer and personal applications of m-commerce, including entertainment, ubiquitous computing and sensory networks

SEMESTER III

Course Code	: 22MSE32N	INTERNSHIP	CIE Marks	: 50
Credits L-T-P	: 0 - 0 - 6		SEE Marks	: 50
Hours/Week	: 12		SEE Durations	: 3 Hrs

Guidelines:

1. The duration of the internship shall be for a period of 6 weeks on full time basis after II semester final exams and before the commencement of III semester.
2. The student must submit letters from the industry clearly specifying his / her name and the duration of the internship on the company letter head with authorized signature.
3. Internship must be related to the field of specialization of the respective PG programme in which the student has enrolled.
4. Students undergoing internship training are advised to report their progress and submit periodic progress reports to their respective guides.
5. Students have to present the internship activities carried out to the departmental committee and only upon approval by the committee, the student can proceed to prepare and submit the hard copy of the final internship report.
6. The reports shall be printed on A4 size with 1.5 spacing and Times New Roman with font size 12, outer cover of the report (wrapper) has to be softbound in Ivory color for PG circuit Programs and Light Blue for Non-Circuit Programs.

Course Outcomes: After going through the internship the student will be able to

- CO1: Apply Engineering and Management principles to solve the problems
 CO2: Analyze real-time problems and suggest alternate solutions
 CO3: Communicate effectively and work in teams
 CO4: Imbibe the practice of professional ethics and lifelong learning

Scheme of Continuous Internal Evaluation (CIE):

The evaluation committee shall consist of Guide, Professor, Associate Professor/Assistant Professor. The committee shall assess the presentation and the progress reports.

The evaluation criteria shall be as per the rubrics given below:

Reviews	Activity	Weightage
I	Application of Engineering knowledge in industries, ability to comprehend the functioning of the Organization/ Departments.	40%
II	Importance of Resource Management, Environment and Sustainability. Demonstration and Presentation of Internship work with Report Submission	60%

Scheme for Semester End Evaluation (SEE):

The SEE examination shall be conducted by an external examiner (domain expert) and an internal examiner. Evaluation shall be done in batches, not exceeding 6 students per batch.

SEMESTER III

Course Code	: 22MSE33P	MINOR PROJECT	CIE Marks	: 50
Credits L-T-P	: 0 - 0 - 6		SEE Marks	: 50
Hours/Week	: 12		SEE Durations	: 3 Hrs

Guidelines:

1. Each project group will consist of maximum of two students.
2. Each student / group has to select a contemporary topic that will use the technical knowledge of their program of study after intensive literature survey.
3. Allocation of the guides preferably in accordance with the expertise of the faculty.
4. The minor project would be performed in-house.
5. The implementation of the project must be preferably carried out using the resources available in the department/college.

Course Outcomes: After completing the course, the students will be able to

CO1: Conceptualize, design and implement solutions for specific problems.

CO2: Communicate the solutions through presentations and technical reports.

CO3: Apply resource managements skills for projects.

CO4: Synthesize self-learning, team work and ethics.

Scheme of Continuous Internal Examination

Evaluation shall be carried out in three reviews. The evaluation committee shall consist of Guide, Professor and Associate Professor/Assistant Professor.

Phase *	Activity	Weightage
I	Approval of the selected topic, formulation of Problem Statement and Objectives with Synopsis submission	20 %
II	Mid-term seminar to review the progress of the work with documentation	40 %
III	Oral presentation, demonstration and submission of project report	40 %

* Phase wise rubrics to be prepared by the respective departments

CIE Evaluation shall be done with weightage / distribution as follows:

• Selection of the topic & formulation of Problem Statement and Objectives	10 %
• Design and simulation/ Algorithm development/ Experimental setup	25 %
• Conducting experiments/ Implementation / Testing	25 %
• Demonstration & Presentation	25 %
• Report writing	15 %

Scheme of Semester End Examination (SEE):

The evaluation will be done by ONE senior faculty from the department and ONE external faculty member from Academia / Industry / Research Organization. The following weightages would be given for the examination. Evaluation will be done in batches, not exceeding 6 students.

- Brief write up about the project 05%
- Methodology and Experimental Results & Discussion 20%
- Presentation / Demonstration of the Project 25%
- Report 20%
- Viva Voce 30%

SEMESTER IV

Course Code	: 22MSE41P	MAJOR PROJECT	CIE Marks	: 100
Credits L-T-P	: 0 - 0 - 18		SEE Marks	: 100
Hours/Week	: 36		SEE Durations	: 3 Hrs

Guidelines:

1. Major Project is to be carried out for a duration of 18 weeks
2. Students must adhere to the Project Presentation Schedule, report to their guide on a weekly basis and get their Project diary signed by their guide
4. Students must execute the Major Project individually and not in teams.
5. It is mandatory for the students to present/publish their project work in National/International Conferences or Journals
6. The reports shall be printed on A4 size with 1.5 spacing and Times New Roman with font size 12, outer cover of the report (wrapper) has to be soft bound and in Ivory color for PG circuit Programs and Light Blue for Non-Circuit Programs

Course Outcomes: After completing the course, the students will be able to

CO1: Conceptualize, Design and Implement solutions for specific problems.

CO2: Communicate the solutions through presentations and technical reports.

CO3: Apply project and resource managements skills, professional ethics and societal concerns

CO4: Synthesize self-learning, sustainable solutions and demonstrate life-long learning

Scheme of Continuous Internal Examination

Evaluation shall be carried out in three reviews. The evaluation committee shall consist of Guide, Professor, Associate Professor/Assistant Professor.

Phase *	Activity	Weightage
I	Selection of Project Title, Formulation of Problem Statement and Objectives	20 %
II	Design, Implementation and Testing	40 %
II	Experimental Result & Analysis, Conclusions and Future Scope of Work, Report Writing and Paper Publication	40 %

* Phase wise rubrics to be prepared by the respective departments

Scheme for Semester End Evaluation (SEE):

Major Project SEE evaluation shall be conducted in two stages. This is initiated after fulfilment of submission of Project Report and CIE marks.

Stage-1 Report Evaluation: Evaluation of Project Report shall be done by the Guide and an External examiner.

Stage-2 Project Viva-voce: Major Project Viva-voce examination is conducted after receipt of evaluation reports from Guide and External examiner.

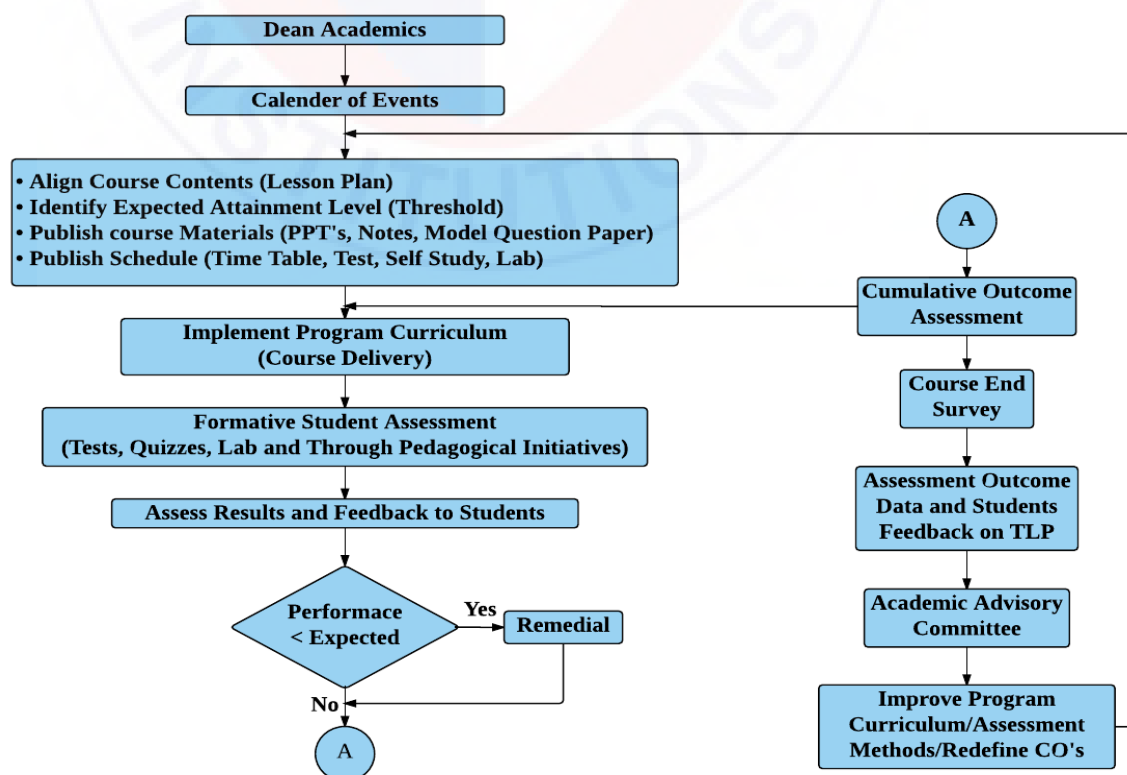

SEE procedure is as follows:

Report	Internal Examiner: 100 Marks	= 200	
Evaluation	External Examiner: 100 Marks	200 / 2 = 100	A
Viva-Voce	Jointly evaluated by Internal Guide & External Evaluator	= 100	B
Total Marks = (A + B) / 2 =		100

Innovative Clubs of RVCE

1	Ashwa Racing	Ashwa Mobility Foundation (AMF) is a student R&D platform that designs and fabricates Formula theme race cars and future mobility solutions to tackle urban transportation problems.
2	Astra Robites	Team involved in the design, fabrication and building application specific robots.
3	Coding Club	To facilitate students the skills, confidence, and opportunity to change their world using coding and help them become successful in GSoC, ACM-ICPC, and other recognized coding competitions.
4	Entrepreneurship Development Cell	E-Cell is a student run body that aims to promote entrepreneurship by conducting workshops, speaker sessions and discussions on business and its aspects. We possess a mentor board to help startups grow.
5	Frequency Club	Team aims at contributing in both software and hardware domains mainly focusing on Artificial Intelligence, Machine Learning and it's advances.
6	Garuda	Design and development of supermileage urban concept electric car. Indigenous development of E-mobility products.
7	Jatayu	Build a low cost Unmanned Aerial Vehicle capable of Autonomous Navigation, Obstacle Avoidance, Object Detection, Localization, Classification and Air Drop of a package of optimum weight.
8	Solar Car	Build a roadworthy solar electric vehicle in order to build a green and sustainable environment.
9	Team Antariksh	Team Antariksh is a Space Technology Student Club whose goal is to understand, disseminate and apply the engineering skills for innovation in the field of Space technology. designing Nano-Satellite payload for ISRO PS4 Orbital platform, RVSAT-1 along with developing experimental rockets of various altitude.
10	Team Chimera	Building a Formula Electric Car through Research and Development in E-Mobility. Electrifying Formula Racing.
11	Helios Racing	Team involved in design, manufacturing and testing of All-Terrain Vehicles and other supportive tasks for the functioning of the team. Participating in BAJA competitions organized by SAE in India and the USA.
12	Team Hydra	Developing autonomous underwater vehicles and use it for various real world applications such as water purification, solid waste detection and disposal etc.
13	Team Krushi	Develop low cost equipments, which help farmers in cultivating and harvesting the crops. Use new technology applications to reduce the labour time hand cost for farmers. Aims at developing implants for Tractors.
14	Team vyoma	Design, fabrication and testing of radio controlled aircrafts and research on various types of unmanned aerial vehicles.
15	Team Dhruva	Organizing activities like quizzes based on astronomy, Stargazing and telescope handling sessions. Construction of a standard observatory. working on small projects with organizations like ICTS, IIA, ARIES etc.
16	Ham club	To popularize Amateur Radio as a hobby among students, alongside exploring technical innovations in the communications domain. Intended to provide human capital for service to the nation at times of natural calamities.

"Not me but you"
"Education through
Community Service &
Community Service through education"

Cultural Activity Teams

1. **AALAP (Music club)**
2. **DEBSOC (Debating society)**
3. **CARV (Dramatics club)**
4. **FOOTPRINTS (Dance club)**
5. **QUIZCORP (Quizzing society)**
6. **ROTARACT (Social welfare club)**
7. **RAAG (Youth club)**
8. **EVOKE (Fashion team)**
9. **f/6.3 (Photography club)**
10. **CARV ACCESS (Film-making club)**

VISION

Leadership in Quality Technical Education, Interdisciplinary Research & Innovation, with a Focus on Sustainable and Inclusive Technology

MISSION

- ❖ To deliver outcome based Quality education, emphasizing on experiential learning with the state of the art infrastructure.
- ❖ To create a conducive environment for interdisciplinary research and innovation.
- ❖ To develop professionals through holistic education focusing on individual growth, discipline, integrity, ethics and social sensitivity.
- ❖ To nurture industry-institution collaboration leading to competency enhancement and entrepreneurship.
- ❖ To focus on technologies that are sustainable and inclusive, benefiting all sections of the society.

QUALITY POLICY

Achieving Excellence in Technical Education, Research and Consulting through an Outcome Based Curriculum focusing on Continuous Improvement and Innovation by Benchmarking against the global Best Practices.

CORE VALUES

Professionalism, Commitment, Integrity, Team Work, Innovation
