DEPARTMENT OF CIVIL ENGINEERING

# **RV COLLEGE OF ENGINEERING<sup>®</sup>** (Autonomous Institution Affiliated to VTU, Belagavi) R.V.Vidyaniketan Post, Mysore Road Bengaluru – 560 059

### VISION

Leadership in Quality Technical Education, Interdisciplinary Research & Innovation, with a Focus on Sustainable and Inclusive Technology

#### MISSION

- To deliver outocme based Quality education, emphasizing on experiential learning with the state of the art infrastructure.
- To create a conducive environment for interdisciplinary research and innovation.
- To develop professionals through holistic education focusing on individual growth, discipline, integrity, ethics and social sensitivity.
- To nurture industry-institution collaboration leading to competency enhancement and entrepreneurship.
- To focus on technologies that are sustainable and inclusive, benefiting all sections of the society.

		Semester: I Semester	
	APPLIED MATHEMATICS		
		(Theory)	
		mon to AS, BT, CH, CV, IM, N	,
Cou	rse Code: 18MAT11A		CIE Marks: 100
Cred	lits : L:T:P: 4:0:0		SEE Marks: 100
Hou	rs: 47L		SEE Duration: 3Hrs
Cou	rse Learning Objectives:		
1	Adequate exposure to learn s	tatistical techniques, random pher	nomena for analyzing data to find
	the suitable mathematical/probability models for solving practical situation in engineering		
	applications.		
2	To learn fundamentals of line	ear algebra, solution of system of	Elinear equations and eigen value
	problems used in various field	ds of engineering and science.	
3	Explore the possibility of	finding approximate solutions u	ising numerical methods in the
	absence of analytical solution	s of various systems.	
4	Apply the concepts of optim	nization to solve engineering ap	plications of optimization which
	have great importance in the	field of engineering.	

Unit-I	
STATISTICS	09 Hrs
Method of least squares, fitting of straight line, linearization of nonlinear laws, curve fitting	
by polynomials, correlation, coefficient of correlation, lines of regression, Spearman rank	
correlation.	
Unit -II	
PROBABILITY DISTRIBUTIONS	09 Hrs
Introduction to probability, Random variables-discrete and continuous random variables,	
important measures and moment generating functions, Standard distributions-Binomial,	
Exponential, Normal and Gamma distributions.	
Unit -III	
SYSTEM OF LINEAR EQUATIONS AND EIGEN VALUE PROBLEMS	09 Hrs
System of linear equations-LU decomposition and Gauss-Jordan method, Eigen value	
problems-bounds on eigen values, Power method and Inverse Power method, Eigen values	
and eigen vectors of real symmetric matrices-Jacobi method.	
Unit -IV	
NUMERICAL SOLUTION OF DIFFERENTIAL EQUATIONS	10 Hrs
Boundary value problems (BVP's)-finite difference method for linear and nonlinear	
problems, Shooting method and Galerkin method. Finite differences-implicit and explicit	
scheme, Finite difference methods for parabolic, elliptic and hyperbolic partial differential	
equations, Finite element method and simple problems.	
Unit -V	
CONCEPTS OF ENGINEERING OPTIMIZATION	
Engineering applications of optimization, statement of an optimization problem-design	
vector, design constraints, constraint surface, objective function and objective function	10 Hrs
surface. Multivariable optimization with inequality constraints-Kuhn-Tucker conditions,	
Constraint qualification, Genetic operators, Neural-Network-based Optimization.	
Optimization of Fuzzy systems.	
Course outcomes: On completion of the course, the student should have acquired the	
ability to	
CO1 Identify and interpret the fundamental concepts of statistics, distributions, linear	algebra,
differential equations and optimization arising in various fields engineering.	
CO2 Apply the knowledge and skills of statistical/numerical/optimization techniques	to solve

	problems of least squares, probability distributions, linear equations, eigen value problems and differential equations.
CO3	Analyze the physical problem to establish statistical/mathematical model and use appropriate
	method to solve and optimize the solution.
CO4	Distinguish the overall mathematical knowledge gained to demonstrate the problems of least squares, probability distributions, linear equations, eigen value problems, differential equations and optimization arising in practical situations.

Exp	pected Course Outcomes:
Aft	ter successful completion of this course the student will be able to:
	CO1. Demonstrate the concepts of matrix methods to develop co-ordinate system for trusses, beams, and frames by force and displacement approach.
	CO2. Apply knowledge of local and global coordinate system to develop displacement transformation matrices.
	CO3. Analyze structures using matrix methods by analytical methods and software tools with different degrees of freedom
	CO4. Evaluate stress resultants and behaviour of structural elements under different boundary conditions.

### Scheme of Continuous Internal Examination (CIE)

Evaluation of CIE will be carried out in TWO Phases.

Phase	Activity
I	After the completion of Unit 1 and Unit 2, students are required to undergo a test set for a total of 50 marks. The structure of the test will have two parts. Part A will be quiz based, evaluated for 15 marks and Part B will be of descriptive type, set for 50 Marks and reduced to 35 marks. The total marks for this phase will be $50(15 + 35)$ .
II	Students will have to take up second test after the completion Unit 3, Unit 4 and Unit 5. The structure of the test will have two parts. Part A will be quiz based evaluated for 15 marks and Part B will be of descriptive type, set for 50 Marks and reduced to 35 marks. The total marks for this phase will be $50 (15 + 35)$ .
	FINAL CIE COMPUTATION
	uous Internal Evaluation for this course will be based on the average of the score attained
through	the two tests. The CIE score in this course, which is a mandatory requirement for the award of

degree, must be greater than 50%. The attendance will be same as other courses.

Dilapidated Structure, Cas	e Studies.		
<b>Course Outcomes:</b>			
<b>1.</b> Identify the causes of fa	ilure in concrete structures		
2. Analyze failures in cond			
3. Evaluate causes for failures in deteriorated concrete structures			
<b>4.</b> Develop simple and cor	nprehensive solutions to rehabili	tate deteriorated structures

#### **Continuous Internal Evaluation (CIE); Theory (100 Marks)**

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) solving innovative problems 2) seminar/new developments in the related course 3) Laboratory/field work 4) mini project. **Total CIE is 20+50+30=100 Marks.** 

#### Semester End Evaluation (SEE): Total marks: 100

#### Scheme of Semester End Examination (SEE) for 100 marks:

		DESIGN OF FORMWORK	
		(Group A:Core Elective)	
Course	Code : 18MST 1A2	(Theory)	CIE Marks:100
		SEE Marks:100	
Hours:	48L		SEE Duration:3 Hrs
Course	Learning Objectives:	Students are able to learn	
<b>1</b> Fo	ormwork types, accesso	ries required and materials used.	
<b>2</b> Fo	ormwork design princip	les required for Beams, Slabs, columns, Walls and	l Foundations.
<b>3</b> Fo	rmwork design princip	les required for Special Structures.	
<b>4</b> Ca	se studies on flying for	mwork and formwork failures.	
		Unit – I	9Hours
Introdu	iction: Requirements a	nd Selection of Formwork.	
Formw	ork Materials- Timb	er, Plywood, Steel, Aluminium, Plastic, and A	Accessories. Horizontal and
Vertical	Formwork Supports.		
		Unit – II	10Hours
Formw	ork Design: Concepts	, Formwork Systems and Design, for Tall Stru	ctures, Foundations, Walls,
Column	s, Slab and Beams.		
		Unit – III	10Hours
Formw	ork Design for Specia	l Structures: Shells, Domes, Folded Plates, Ove	rhead Water Tanks, Natural
Draft C	ooling Tower, Bridges.		
		Unit – IV	9 Hours
Flying	Formwork: Table Fo	rm, Tunnel Form, Slip Form, Formwork for P	recast Concrete, Formwork
Manage	ement Issues -Pre- and	Post-Award.	
		Unit-V	10Hours
Formw	ork Failures: Causes	and Case studies in Formwork Failure, Form	work Issues in Multistorey
Buildin	g Construction.		
Course	Outcomes:		
After go	oing through this course	the student will be able to	
CO1:	Select proper formwo	ork, accessories and material.	
CO2:	Design the form work	c for Beams, Slabs, columns, Walls and Foundation	ons.
CO3:	Design the form work	c for Special Structures.	
CO4:	Understand the work	ing of flying formwork and Judge the formwork fa	ailures through case studies

#### Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) solving innovative problems 2) seminar/new developments in the related course 3) Laboratory/field work 4) mini project. **Total CIE is 20+50+30=100 Marks.**

#### Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) solving innovative problems 2) seminar/new developments in the related course 3) Laboratory/field work 4) mini project. **Total CIE is 20+50+30=100 Marks.** 

#### Continuous Internal Evaluation (CIE); Practical( 50 Marks)

The Laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average of marks over number of weeks is considered for 30 marks. At the end of the semester a test is conducted for 10 marks. The students are encouraged to implement additional innovative experiments in the lab and are rewarded for 10 marks. Total marks for the laboratory is 50.

#### Semester End Evaluation (SEE): Total marks: 100+50=150 Theory (100 Marks) + Practical (50 Marks) =Total Marks (150)

#### Scheme of Semester End Examination (SEE) for 100 marks:

The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

#### Scheme of Semester End Examination (SEE); Practical (50 Marks)

SEE for the practical courses will be based on experiment conduction with proper results, is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

MINOR PROJECT						
Course Code	:	18MST24		CIE Marks	:	100
Credits L: T: P	:	0:0:2		SEE Marks	:	100
Hours	:	48P		SEE Duration	:	3 hrs

#### GUIDELINES

- 1. Each project group will consist of maximum of two students.
- 2. Each student / group has to select a contemporary topic that will use the technical knowledge of their program of study after intensive literature survey.
- 3. Allocation of the guides preferably in accordance with the expertise of the faculty.
- 4. The number of projects that a faculty can guide would be limited to four.
- 5. The minor project would be performed in-house.
- 6. The implementation of the project must be preferably carried out using the resources available in the department/college.

Course Outcomes: After completing the course, the students will be able to			
CO1	Conceptualize, design and implement solutions for specific problems.		
CO2	Communicate the solutions through presentations and technical reports.		
CO3	Apply resource managements skills for projects.		
CO4	Synthesize self-learning, team work and ethics.		

#### **Scheme of Continuous Internal Examination**

Evaluation will be carried out in 3 phases. The evaluation committee will comprise of 4 members: Guide, Two Senior Faculty Members and Head of the Department.

Phase	Activity	Weightage
Ι	Synopsys submission, Preliminary seminar for the approval of selected topic and	20%
	objectives formulation	
II	Mid term seminar to review the progress of the work and documentation	40%
III	Oral presentation, demonstration and submission of project report	40%

\*\* Phase wise rubrics to be prepared by the respective departments

#### **CIE Evaluation shall be done with weightage / distribution as follows:**

Selection of the topic & formulation of objectives	10%
• Design and simulation/ algorithm development/ experimental setup	25%
Conducting experiments/ implementation / testing	25%
Demonstration & Presentation	15%
Report writing	25%
	2070

#### Scheme of Semester End Examination (SEE):

The evaluation will be done by ONE senior faculty from the department and ONE external faculty member from Academia / Industry / Research Organization. The following weightages would be given for the examination. Evaluation will be done in batches, not exceeding 6 students.

٠	Brief write up about the project	05%
٠	Presentation / Demonstration of the Project	20%
٠	Methodology and Experimental results & Discussion	25%
٠	Report	20%
٠	Viva Voce	30%

#### Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks.A minimum of two assignments are given with a combination of two components among 1) solving innovative problems 2) seminar/new developments in the related course 3) Laboratory/field work 4) mini project. **Total CIE is 20+50+30=100 Marks.** 

#### Semester End Evaluation (SEE): Total marks: 100

#### **Continuous Internal Evaluation (CIE): Total marks: 100**

#### Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks.A minimum of two assignments are given with a combination of two components among 1) solving innovative problems 2) seminar/new developments in the related course 3) Laboratory/field work 4) mini project. **Total CIE is 20+50+30=100 Marks.**

Credits L: T: P	:	3:0:0	SEE Marks	:	100	
Hours	:	36L	SEE Duration	:	3 hrs	

#### **Course Learning Objectives:**

Graduates shall be able to

- 1. Formulate and solve business problems to support managerial decision making.
- 2. Explore the concepts, processes needed to develop, report, and analyze business data.
- 3. Use data mining techniques concepts to identify specific patterns in the data
- 4. Interpret data appropriately and solve problems from various sectors such as manufacturing, service, retail, software, banking and finance.

Unit – I	
Business analytics: Overview of Business analytics, Scope of Business analytics, Business	07 Hrs
Analytics Process, Relationship of Business Analytics Process and organization,	
competitive advantages of Business Analytics.	
Statistical Tools: Statistical Notation, Descriptive Statistical methods, Review of probability	
distribution and data modelling.	
Unit – II	
Trendiness and Regression Analysis: Modelling Relationships and Trends in Data, simple	07 Hrs
Linear Regression. Important Resources, Business Analytics Personnel, Data and models	
for	
Business analytics, problem solving, Visualizing and Exploring Data, Business Analytics	
Technology.	
Unit – III	•
Organization Structures of Business analytics, Team management, Management Issues,	07 Hrs
Designing Information Policy, Outsourcing, Ensuring Data Quality, Measuring	
contribution of Business analytics, Managing Changes. Descriptive Analytics, Predictive	
Analytics, Predicative Modelling, Predictive analytics analysis.	
Unit – IV	
Forecasting Techniques: Qualitative and Judgmental Forecasting, Statistical Forecasting	08 Hrs
Models, Forecasting Models for Stationary Time Series, Forecasting Models for Time	
Series with a Linear Trend, Forecasting Time Series with Seasonality, Regression	
Forecasting with Casual Variables, Selecting Appropriate Forecasting Models.	
Unit –V	1
Decision Analysis: Formulating Decision Problems, Decision Strategies with and without	07 Hrs
Outcome, Probabilities, Decision Trees, The Value of Information, Utility and Decision	
Making.	

Course	Course Outcomes: After going through this course the student will be able to:		
CO1	Explore the concepts, data and models for Business Analytics.		
CO2	Analyze various techniques for modelling and prediction.		
CO3	Design the clear and actionable insights by translating data.		
<b>CO4</b>	Formulate decision problems to solve business applications

## Continuous Internal Evaluation (CIE): Total marks: 100 Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks.A minimum of two assignments are given with a combination of two components among 1) solving innovative problems 2) seminar/new developments in the related course 3) Laboratory/field work 4) mini project. **Total CIE is 20+50+30=100 Marks.** 

## Semester End Evaluation (SEE): Total marks: 100

#### Scheme of Semester End Examination (SEE) for 100 marks:

Semester: II					
MODELING USING LINEAR PROGRAMMING					
	(Group G: Global Elective)				
<b>Course Code</b>	:	18IM2G03	CIE Marks	:	100
Credits L: T: P	:	3:0:0	SEE Marks	:	100
Hours	:	36L	SEE Duration	:	3 hrs

Unit – I	
Linear Programming: Introduction to Linear Programming problem	07 Hrs
Simplex methods: Variants of Simplex Algorithm – Use of Artificial Variables	
Unit – II	
Advanced Linear Programming : Two Phase simplex techniques, Revised simplex method	07 Hrs
Duality: Primal-Dual relationships, Economic interpretation of duality	
Unit – III	•
Sensitivity Analysis: Graphical sensitivity analysis, Algebraic sensitivity analysis - changes	07 Hrs
in RHS, Changes in objectives, Post optimal analysis - changes affecting feasibility and	
optimality	
Unit – IV	
Transportation Problem: Formulation of Transportation Model, Basic Feasible Solution	08 Hrs
using North-West corner, Least Cost, Vogel's Approximation Method, Optimality Methods,	
Unbalanced Transportation Problem, Degeneracy in Transportation Problems, Variants in	
Transportation Problems.	
Unit –V	
Assignment Problem: Formulation of the Assignment problem, solution method of	07 Hrs
assignment problem-Hungarian Method, Variants in assignment problem, Travelling	
Salesman Problem (TSP).	

Cours	Course Outcomes: After going through this course the student will be able to:			
<b>CO1</b> Explain the various Linear Programming models and their areas of application.				
CO2	Formulate and solve problems using Linear Programming methods.			
CO3	Develop models for real life problems using Linear Programming techniques.			
CO4	Analyze solutions obtained through Linear Programming techniques.

Semester: II					
	PROJECT MANAGEMENT				
	(Group G: Global Elective)				
Course Code	:	18IM2G04	CIE Marks	:	100
Credits L: T: P	:	3:0:0	SEE Marks	:	100
Hours	:	36L	SEE Duration	:	3 hrs

Unit – I	
Introduction: Project Planning, Need of Project Planning, Project Life Cycle, Roles,	07 Hrs
Responsibility and Team Work, Project Planning Process, Work Breakdown Structure	
(WBS), Introduction to Agile Methodology.	
Unit – II	
Capital Budgeting: Capital Investments: Importance and Difficulties, phases of capital	07 Hrs
budgeting, levels of decision making, facets of project analysis, feasibility study - a	
schematic diagram, objectives of capital budgeting	
Unit – III	
Project Costing: Cost of Project, Means of Finance, Cost of Production, Working Capital	08 Hrs
Requirement and its Financing, Profitability Projections, Projected Cash Flow Statement,	
Projected Balance Sheet, Multi-year Projections, Financial Modeling, Social Cost Benefit	
Analysis	
Unit – IV	
Tools & Techniques of Project Management: Bar (GANTT) chart, bar chart for combined	07Hrs
activities, logic diagrams and networks, Project evaluation and review Techniques (PERT)	
Critical Path Method (CPM), Computerized project management	
Unit-V	
Project Management and Certification: An introduction to SEI, CMMI and project	07 Hrs
management institute USA - importance of the same for the industry and practitioners.	
PMBOK 6 - Introduction to Agile Methodology, Themes / Epics / Stories, Implementing	
Agile.	
Domain Specific Case Studies on Project Management: Case studies covering project	
planning, scheduling, use of tools & techniques, performance measurement.	

Cours	Course Outcomes: After going through this course the student will be able to:			
CO1	Explain project planning activities that accurately forecast project costs, timelines, and quality.			
CO2	Evaluate the budget and cost analysis of project feasibility.			
CO3	Analyze the concepts, tools and techniques for managing projects.			
CO4	Illustrate project management practices to meet the needs of Domain specific stakeholders from multiple sectors of the economy (i.e. consulting, government, arts, media, and charity organizations).

#### Scheme of Semester End Examination (SEE) for 100 marks:

	II Semester
	ENERGY MANAGEMENT
	(Group G: Global Elective)
Course Code: 18CH2G05	CIE Marks: 100
Credits: L:T:P: 3:0:0	SEE Marks: 100
Hours: 36L	SEE Hrs: 3

#### Course Learning Objectives(CLO):

Students are able to:

- 1. Explain the importance of energy conservation and energy audit.
- 2. Understand basic principles of renewable sources of energy and technologies.
- 3. Outline utilization of renewable energy sources for both domestics and industrial application.
- 4. Analyse the environmental aspects of renewable energy resources.

Unit-I 08	Hrs
Energy conservation:	
Principles of energy conservation, Energy audit and types of energy audit, Energy conservation,	ation
approaches, Cogeneration and types of cogeneration, Heat Exchangers and classification.	
Unit-II 07	Hrs
Wet Biomass Gasifiers:	
Introduction, Classification of feedstock for biogas generation, Biomass conversion technologies:	Wet
and dry processes, Photosynthesis, Biogas generation, Factors affecting bio-digestion, Classific	ation
of biogas plants, Floating drum plant and fixed dome plant their advantages and disadvantages.	
Unit -III 07	Hrs
Dry Biomass Gasifiers :	
Biomass energy conversion routes, Thermal gasification of biomass, Classification of gasifiers, H	Fixed
bed systems: Construction and operation of up draught and down draught gasifiers.	
	Hrs
Solar Photovoltaic:	
Principle of photovoltaic conversion of solar energy, Types of solar cells and fabrication.	
Wind Energy:	
Classification, Factors influencing wind, WECS & classification.	
	Hrs
Alternative liquid fuels:	•1 1
Introduction, Ethanol production: Raw materials, Pre-treatment, Conversion processes with det	
flow sheet. Gasification of wood: Detailed process, Gas purification and shift conversion, Big	Siller
from water hyacinth.	
Course outcomes (CO):	
On completion of the course, the student should have acquired the ability to	
CO1: Understand the use alternate fuels for energy conversion	
CO2: Develop a scheme for energy audit	
CO3: Evaluate the factors affecting biomass energy conversion	
CO4: Design a biogas plant for wet and dry feed

	INDUSTRY 4.0					
		(0	Group G: Global Elective)			
<b>Course Code</b>	:	18ME2G06	CIE Marks	:	100	
Credits L: T: P	:	3:0:0	SEE Marks	:	100	
Hours	:	36L	SEE Duration	:	3 hrs	

Unit – I	
Introduction: Industrial, Internet, Case studies, Cloud and Fog, M2M Learning and	07 Hrs
Artificial Intelligence, AR, Industrial Internet Architecture Framework (IIAF), Data	
Management.	
Unit – II	
The Concept of the IIoT: Modern Communication Protocols, Wireless Communication	07 Hrs
Technologies, Proximity Network Communication Protocols, TCP/IP, API: A Technical	
Perspective, Middleware Architecture.	
Unit – III	
Data Analytics in Manufacturing: Introduction, Power Consumption in manufacturing,	08 Hrs
Anomaly Detection in Air Conditioning, Smart Remote Machinery Maintenance Systems	
with Komatsu, Quality Prediction in Steel Manufacturing.	
Internet of Things and New Value Proposition, Introduction, Internet of Things Examples,	
IoTs Value Creation Barriers: Standards, Security and Privacy Concerns.	
Advances in Robotics in the Era of Industry 4.0, Introduction, Recent Technological	
Components of Robots, Advanced Sensor Technologies, Artificial Intelligence, Internet of	
Robotic Things, Cloud Robotics.	
Unit – IV	
Additive Manufacturing Technologies and Applications: Introduction, Additive	07 Hrs
Manufacturing (AM) Technologies, Stereo lithography, 3DP, Fused Deposition Modeling,	
Selective Laser Sintering, Laminated Object Manufacturing, Laser Engineered Net	
Shaping, Advantages of Additive Manufacturing, Disadvantages of Additive	
Manufacturing.	
Advances in Virtual Factory Research and Applications, The State of Art, The Virtual	
Factory Software , Limitations of the Commercial Software	
	0 7 11
Augmented Reality: The Role of Augmented Reality in the Age of Industry 4.0,	07 Hrs
Introduction, AR Hardware and Software Technology, Industrial Applications of AR,	
Maintenance, Assembly, Collaborative Operations, Training.	
Smart Factories: Introduction, Smart factories in action, Importance, Real world smart	
factories, The way forward.	
A Roadmap: Digital Transformation, Transforming Operational Processes, Business	
Models, Increase Operational Efficiency, Develop New Business Models.

Credits L: T: P	:	3:0:0	SEE Marks	:	100
Hours	:	36L	SEE Duration	:	3 hrs

Unit – I	
Classification and Selection of Materials: Classification of materials. Properties required	07 Hrs
in Engineering materials, Criteria of selection of materials. Requirements / needs of	
advance materials.	
Unit – II	
Non Metallic Materials: Classification of n on metallic materials, Rubber : Properties,	07 Hrs
processing and applications.Plastics : Thermosetting and Thermoplastics, Applications and	
properties. Ceramics : Properties and applications. Adhesives: Properties and applications.	
Optical fibers : Properties and applications. Composites : Properties and applications.	
Unit – III	
High Strength Materials: Methods of strengthening of alloys, Materials available for	08 Hrs
high strength applications, Properties required for high strength materials, Applications of	
high strength materials	
Unit – IV	
Low & High Temperature Materials	07 Hrs
Properties required for low temperature applications, Materials available for low	
temperature applications, Requirements of materials for high temperature applications,	
Materials available for high temperature applications, Applications of low and high	
temperature materials.	
Unit –V	
Nanomaterials: Definition, Types of nanomaterials including carbon nanotubes and	07 Hrs
nanocomposites, Physical and mechanical properties, Applications of nanomaterials	
inite composites, 2 injectur and meenaneur properties, 1 ippreations of nationatematic	

Cours	Course Outcomes: After going through this course the student will be able to:			
CO1	Describe metallic and non metallic materials			
CO2	Explain preparation of high strength Materials			
CO3	Integrate knowledge of different types of advanced engineering Materials			
CO4	Analyse problem and find appropriate solution for use of materials.

Unit –V	
Polymer nano composites	
Introduction and Significance of polymer Nano composites. Intercalated And Exfoliated	
Nanocomposites. Classification of Nano fillers- nanolayers, nanotubes, nanoparticles.	
Preparation of Polymer Nano composites by Solution, In-situ Polymerization and melt	
mixing techniques. Characterization Of polymer nanocomposites- XRD, TEM, SEM and	
AFM. Mechanical and Rheological properties of Polymer Nano composites. Gas barrier,	
Chemical-Resistance, Thermal and Flame retardant properties of polymer nanocomposites.	
Optical properties and Biodegradability studies of Polymer nanocomposites, Applications	
of polymer nano-composites.	

Course Outcomes: After completing the course, the students will be able to	
CO1:	Understand the purpose and the ways to develop new materials upon proper combination of
	known materials.
CO2:	Identify the basic constituents of a composite materials and list the choice of materials
	available
CO3:	Will be capable of comparing/evaluating the relative merits of using alternatives for important
	engineering and other applications.
CO4:	Get insight to the possibility of replacing the existing macro materials with nano-materials.

#### Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks)

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) solving innovative problems 2) seminar/new developments in the related course 3) Laboratory/field work 4) mini project. **Total CIE is 20+50+30=100 Marks.** 

#### Scheme of Semester End Examination (SEE) for 100 marks:

	Semester : II	
	PHYSICS OF MATERIALS	
	(Group G: Global Elective)	
Course Code: 18PHY2G09		CIE Marks: 100
Credits: L:T:P: 3:0:0		SEE Marks: 100
Hours: 36L		SEE Duration: 3Hrs

#### **Course Learning Objectives (CLO):**

Student are able to

1. Classify the crystals based on lattice parameters.

2.Explain the behavior of Dielectrics with change in frequency.

3. Classify the magnetic materials based on Quantum theory as well understand superconductors.

4.Explain direct and indirect bandgap semiconductors, polymer semiconductors and Photoconductive polymers.

5.Describe the behavior of Smart materials and its phases and apply to Engineering applications.

Unit-I	
	07 Hrs
Crystal Structure :	
Symmetry elements-seven crystals systems-Reciprocal lattice-Packing fraction	, Lattice Vibration-
Brillouin zones, Analysis of Crystal structure using XRD, Thermal properties.	I
Unit-II	07 Hrs
Dielectric Materials:	
Basic concepts-Langevin's Theory of Polarisation-Clausius-Mossotti Relation	•
Piezoelectricity-Properties of Dielectric in alternating fields-The complex Diel	
Dielectric Loss, Polarizability as a function of frequency-Complex dielectric co	onstant of non-polar
solids-Dipolar relaxation, Applications.	1
Unit -III	07Hrs
Magnetic Materials :	
Dia and Paramagnetic materials-Quantum theory of paramagnetic ma	•
susceptibility of conduction electrons-Ferro-anti ferromagnetic materials-Su	perconductors and
Applications	
Unit -IV	07 Hrs
Semiconducting Materials	
Semiconductor-Direct and Indirect bonding characteristics-Importance of Qua	antum confinement-
quantum wirag and data Karro algotria comiconductors annications Delymon as	
quantum wires and dots-Ferro electric semiconductors-applications-Polymer se	miconductors-Photo
conductive polymers, Applications.

#### Course Outcomes (CO's): CO1: Analyse crystals using XRD technique. CO2: Explain Dielectric and magnetic materials. CO3:Integrate knowledge of various types of advanced engineering Materials. CO4: Use materials for novel applications.

#### Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks):

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) Solving innovative problems 2) Seminar/new developments in the related course 3) Laboratory/ field work 4) mini project. **Total CIE is 20+50+30 = 100 marks**.

#### Scheme of Semester End Examination (SEE) for 100 marks:

II Semester			
ADVANCED STATISTICAL METHODS			
(Global Elective)			
Course Code: 18MAT2G10		CIE Marks: 100	
Credits: L:T:P:: 3:0:0		SEE Marks: 100	
Hours: 36L		SEE Duration: 3Hrs	

#### **Course Learning Objectives (CLO):**

Students are able to:

1. Adequate exposure to learn sampling techniques, random phenomena for analyzing data for solving real world problems.

2. To learn fundamentals of estimation and problems used in various fields of engineering and science.

3. Explore the fundamental principles of statistical inference and tests of hypothesis.

4. Apply the concepts of regression and statistical models to solve the problems of engineering applications.

Unit-I	07 Hrs	
Sampling Techniques:		
Random numbers, Concepts of random sampling from finite and infinite populations, Simple random		
sampling (with replacement and without replacement). Expectation and standard error of sample mean		
and proportion.		
Unit-II	07 Hrs	
Estimation:		
Point estimation, Estimator and estimate, Criteria for good estimates - unbiasedness, consistency,		
efficiency and sufficiency, Method of moment's estimation and maximum likelihood estimation,		
Properties of maximum likelihood estimator (no proofs), Confidence intervals-population mean (large		
sample), population proportion.		
Unit -III	07Hrs	
Tests of Hypothesis:		
Principles of Statistical Inference, Formulation of the problems with examples, Simple and composite		
hypothesis, Null and alternative hypothesis, Tests - type I and type II error, Testing of mean and		
variance of normal population (one sample and two samples), Chi squared test for goodness of fit.		
Unit -IV	07 Hrs	
Linear Statistical Models:		
Definition of linear model and types, One way ANOVA and two way ANOVA me	odels-one	
observation per cell, multiple but equal number of observation per cell.		
Unit -V	08 Hrs	
Linear Regression:		

Simple linear regression, Estimation of parameters, Properties of least square estimators, Estimation of error variance, Multivariate data, Multiple linear regressions, Multiple and partial correlation, Autocorrelation-introduction and plausibility of serial dependence, sources of autocorrelation, Durbin-Watson test for auto correlated variables.

	1994, Duxbury Press, ISBN-13: 978-0534198695.

#### Course outcomes (CO's):

On completion of the course, the student should have acquired the ability to

CO1: Identify and interpret the fundamental concepts of sampling techniques, estimates and types, hypothesis, linear statistical models and linear regression arising in various fields engineering. CO2: Apply the knowledge and skills of simple random sampling, estimation, null and alternative hypotheses, errors, one way ANOVA, linear and multiple linear regressions.

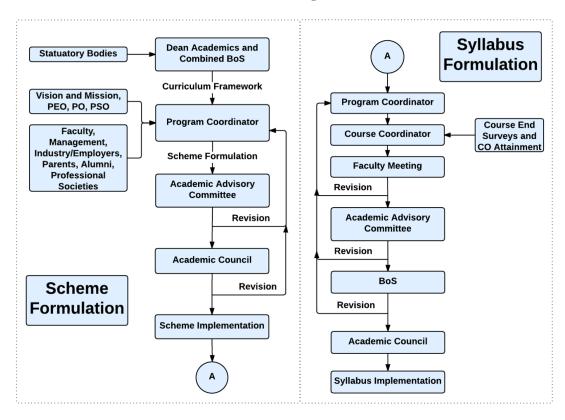

CO3: Analyze the physical problem to establish statistical/mathematical model and use appropriate statistical methods to solve and optimize the solution.

CO4: Distinguish the overall mathematical knowledge gained to demonstrate the problems of sampling techniques, estimation, tests of hypothesis, regression and statistical model arising in many practical situations.

#### Scheme of Continuous Internal Evaluation (CIE); Theory (100 Marks):

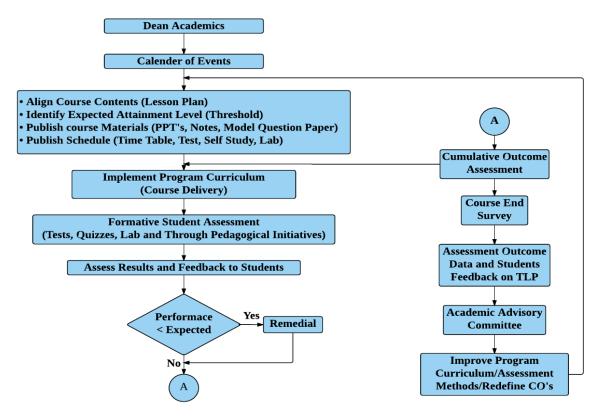

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) Solving innovative problems 2) Seminar/new developments in the related course 3) Laboratory/ field work 4) mini project. **Total CIE is 20+50+30 = 100 marks**.

# **Curriculum Design Process**

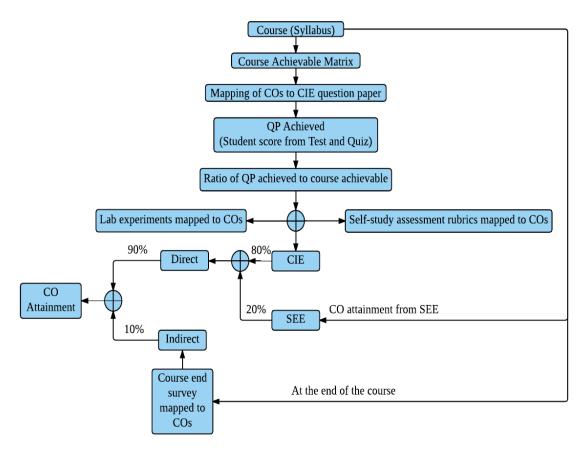

# **Academic Planning And Implementation**

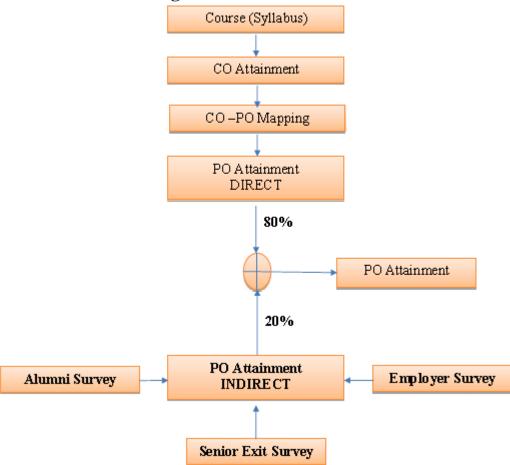

## **Process For Course Outcome Attainment**

## **Final CO Attainment Process**

# **Program Outcome Attainment Process**

#### **PROGRAM OUTCOMES (PO)**

- **PO1**:Independently carry out research / investigation and development work to solve practical problems in structural engineering.
- PO2:Write and present a substantial technical report/document in the area of structural engineering
- PO3:Demonstrate a degree of mastery in use of materials, analysis and design for structural components.
- PO4:Use modern tools for analysis and design of structural systems.
- PO5: Adopt safety and ethical practices in structural design for sustainable environment.

PO6:Exhibit multidisciplinary and managerial skills, with a commitment to lifelong learning.

(Autonomous Institution Affiliated to VTU, Belagavi) RV Vidyaniketan Post, Mysuru Road Bengaluru – 560059

# Scheme and Syllabus of III & IV Semester (Autonomous System of 2018 Scheme)

# Master of Technology (M.Tech) in STRUCTURAL ENGINEERING

DEPARTMENT OF CIVIL ENGINEERING

# **VISION**

Leadership in Quality Technical Education, Interdisciplinary Research & Innovation, with a Focus on Sustainable and Inclusive Technology

# **MISSION**

- 1. To deliver outcome based Quality education, emphasizing on experiential learning with the state of the art infrastructure.
- 2. To create a conducive environment for interdisciplinary research and innovation.
- 3. To develop professionals through holistic education focusing on individual growth, discipline, integrity, ethics and social sensitivity.
- 4. To nurture industry-institution collaboration leading to competency enhancement and entrepreneurship.
- 5. To focus on technologies that are sustainable and inclusive, benefiting all sections of the society.

# **QUALITY POLICY**

Achieving Excellence in Technical Education, Research and Consulting through an Outcome Based Curriculum focusing on Continuous Improvement and Innovation by Benchmarking against the global Best Practices.

# CORE VALUES

Professionalism, Commitment, Integrity, Team Work and Innovation

### VISION

Excel in Education, Research and Consultancy in Civil Engineering with Emphasis on Sustainable Development.

### MISSION

- 1. Disseminating and integrating the knowledge of Civil Engineering and Allied Fields
- 2. Enhancing Industry-Institute Interaction leading to Interdisciplinary Research.
- 3. Imbibing wide-range of Skills in Cutting-Edge Technology for Sustainable Development.
- 4. Motivate Entrepreneurship and Professional Ethics to serve the Society.

### **PROGRAMME OUTCOMES (PO)**

#### M.Tech in Structural Engineering graduates will be able to:

- PO1: Independently carry out research / investigation and development work to solve practical problems in Structural Engineering.
- PO2: Write and present a substantial technical report/document in the area of Structural Engineering
- PO3: Demonstrate a degree of mastery in use of materials, analysis and design for structural components.
- PO4: Use modern tools for analysis and design of structural systems.
- PO5: Adopt safety and ethical practices in structural design for sustainable environment.
- PO6: Exhibit multidisciplinary and managerial skills, with a commitment to lifelong learning.

CIE is executed by way of Quizzes (Q), Tests (T) and Assignments (A). A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) Solving innovative problems 2) Seminar/new developments in the related course 3) Laboratory/field work 4) Minor project. **Total CIE (Q+T+A) is 20+50+30=100 Marks.** 

#### **Continuous Internal Evaluation (CIE); Practical (50 Marks)**

The Laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average of marks over number of weeks is considered for 30 marks. At the end of the semester a test is conducted for 10 marks. The students are encouraged to implement additional innovative experiments in the lab and are rewarded for 10 marks. Total marks for the laboratory is 50.

#### Scheme of Semester End Examination (SEE) for 100 marks:

The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

#### Scheme of Semester End Examination (SEE); Practical (50 Marks)

SEE for the practical courses will be based on experiment conduction with proper results, is evaluated for 40 marks and Viva is for 10 marks. Total SEE for laboratory is 50 marks.

#### Semester End Evaluation (SEE): Total marks: 100+50=150

#### Theory (100 Marks) + Practical (50 Marks) = Total Marks (150)

CIE is executed by way of Quizzes (Q), Tests (T) and Assignments (A). A minimum of two quizzes are conducted and each quiz is evaluated for 10 marks adding up to 20 marks. Faculty may adopt innovative methods for conducting quizzes effectively. Three tests are conducted for 50 marks each and the sum of the marks scored from three tests is reduced to 50 marks. A minimum of two assignments are given with a combination of two components among 1) Solving innovative problems 2) Seminar/new developments in the related course 3) Laboratory/field work 4) Minor project. **Total CIE (O+T+A) is 20+50+30=100 Marks.** 

#### Scheme of Semester End Examination (SEE) for 100 marks:

The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit

#### Scheme of Semester End Examination (SEE) for 100 marks:

The question paper will have FIVE questions with internal choice from each unit. Each question will carry 20 marks. Student will have to answer one full question from each unit.

SEMESTER: IV								
MAJOR PROJECT: PHASE-II								
Course Code	:	18MST41	CIE Marks	:	100			
Credits L:T:P	Credits L:T:P         :         0:0:20         SEE Marks         :         100							
Hours/Week:40SEE Duration:3 Hrs								
GUIDELINES								

1. Major Project Phase-II is continuation of Phase-I.

- 2. The duration of the Phase-II shall be of 16 weeks.
- 3. The student needs to complete the project work in terms of methodology, algorithm development, experimentation, testing and analysis of results.
- 4. It is mandatory for the student to present/publish the work in National/International conferences or Journals
- 5. The reports shall be printed on A4 size with 1.5 spacing and Times New Roman with font size 12, outer cover of the report (wrapper) has to be Ivory color for PG circuit Programs and Light Blue for Non-Circuit Programs.

#### **Course Outcomes**

#### After going through this course the students will be able to:

- CO1: Conceptualize, design and implement solutions for specific problems.
- CO2: Communicate the solutions through presentations and technical reports.
- CO3: Apply project and resource managements skills, professional ethics, societal concerns
- CO4: Synthesize self-learning, sustainable solutions and demonstrate life-long learning.

#### Scheme of Continuous Internal Examination (CIE)

Evaluation shall be carried out in three reviews. The evaluation committee shall consist of Guide, Professor/Associate Professor and Assistant Professor.

The evaluation criteria shall be as per the rubrics given below:

Reviews	Activity	Weightage
Review-I	Review and refinement of Objectives, Methodology and Implementation	20%
Review-II	Design, Implementation and Testing	40%
Review-III	Experimental Result & Analysis, Conclusions and Future Scope of Work, Report Writing and Paper Publication	40%

#### Scheme for Semester End Evaluation (SEE):

Major Project Phase-II SEE shall be conducted in two stages. This is initiated after fulfilment of submission of project report and CIE marks.

#### **Stage-1 Report Evaluation**

Evaluation of Project Report shall be done by guide and an external examiner.

#### Stage-2 Project Viva-voce

Major Project Viva-voce examination is conducted after receipt of evaluation reports from guide and external examiner.

Both Stage-1 and Stage-2 evaluations shall be completed as per the evaluation formats.

#### **SEE procedure is as follows:**

	Internal Guide	Exte	ernal E	xaminer	•	TOTAL		
SEE Report Evaluation	100 marks	100 marks				200 mai		
						(A)	(200/2) = 100 marks	
Viva-Voce	Jointly evaluated External Evaluator	•	nternal	Guide	&	(B)	100 marks	
			Tot	al M	larks	[(A)+(B)]/2 = 100
